1642. Keepalive

Yahoo group: DVAPDongle
Date: 2012-07-17 18:20:42 UTC
From: JamesQ
Topic: 1642 Message: 1642

Is there anyway to get the keepalive with a longer time delay? When you are in the car going through a laptop sometimes you lose your signal for a short time and you lose the connect. Not much trouble to just link back to the DVAP. Forgot to say I am using a DVAP with a laptop in the car. Thanks for any help.

Topic: 1643 Message: 1643

It appears the" -open" command line parameter isn't working with the new ver 1.03. Has anyone else tried it?

I got a new DVAP I cannot connect to any ref. the software is seeing the radio when I tx but won't link to any ref I am using windows 7 and the radio is setup ok

1646. DVAPTool version 1.03 released

Yahoo group: DVAPDongle
Date: 2012-07-21 16:21:40 UTC
From: aa4rc
Topic: 1646 Message: 1646

Version 1.03 of DVAPTool has been released.

Changes include:

1) fixed issue where a failed connection attempt would cause further attempts to fail.

2) added network DVAP support.

The new network DVAP support requires Apple Bonjour libraries on your Windows system. These are installed when you install Apple programs like iTunes or Apple printer support. If you receive a message that DVAPTool failed to start due to a missing library, install the Bonjour print services from the Apple web site shown on the Downloads page.

Here's a copy of the Apple Bonjour link: http://support.apple.com/kb/DL999

If you would like to play with the network DVAP features, there are programs beginning with "dvservice" at http://opendstar.org/tools/. Download the version for your O/S and run it (as root if you are running Linux). Your DVAP will be announced on your local LAN (not to the Internet) and can be seen with DVAPTool 1.03.

A lot of work has gone into the network DVAP server for the beaglebone, raspberry pi, and other ARM based linux platforms. If you have one of these, you can download dvservice-angstrom.tgz and extract with "tar xzPf dvservice-angstrom.tgz". You can then plug in your DVAP and have it available on your local LAN.

The new DVAPTool software is available on the Downloads page at http://www.dvapdongle.com.

Some folks have already started using 1.03 after seeing the Tweet. Thanks for picking up the software and testing before the general release.

73,
Robin

From: azstefano186
Topic: 1646 Message: 1648

Hi Robin:

I installed the V1.03 and it doesn't recognize the dongle. I have the FTDIUSBSerialDriver_v2_2_14 installed.

Two things come to mind: I have the app in my /home/Applications directory instead of the root Applications directory. The previous V1.02 worked fine this way, but it had a package installer and this one is the entire bundled app. The other possibility is that the FTDI driver needs to be updated - I found V2.2.17 on their site. Should I update it? On my Mac OS 10.6.8/C2D system, should I use the 32 or 64-bit version of their driver?

Good afternoon Robin:

Thank you for all the new release of the DVAPTool. I will also put the information that you sent in your email in our local newsletter for the Cedar Valley Amateur Radion Club, CVARC, the Bandspread. The N0CXX repeater users will see it as well.

Thanks again, A happy DVAP and D-STAR user.

1650. DVAPTool version 1.03 network DVAP issue

Yahoo group: DVAPDongle
Date: 2012-07-21 19:23:41 UTC
From: Fran Miele
Topic: 1650 Message: 1650

Robin,

trying network DVAP on win7 machine. I started dsservice on my xp pro machine. The command window stays open. Is it suppose to?

Then I ran the new dvtool 1.03 on my win7 machine. It sees the DVAP but can't open it. Below is what I am seeing in the command window.

```
DVAPTool version 1.03
Restored parameters:
UserCallsign=W1FJM A

OK - I did nothing but wait several minutes, then launched V1.03 again, and now it sees the dongle. The device was plugged in the whole time - the only factor that changed is that I waited a few minutes. Very strange. Anyway, it's working.

Thanks for this update - the DVAP is a fine piece of hardware. Appreciate having it supported for the Mac.

Thanks for the hints Robin. It was the firewall on the XP machine.

I assume the Command windon on the XP machine running dvservices need to remain open and I am supposed to be seeing "net send 7 (0)" scrolling when there is no activity. Is that correct?

1655. 1.03 not working with Ubuntu 10.10

Yahoo group: DVAPDongle
Date: 2012-07-21 21:13:17 UTC
From: kd4ebm
Topic: 1655 Message: 1655

Hi Robin:

No luck getting 1.03 working with Ubuntu 10.10. It mostly fails to detect the dongle. Symptoms are:

- DVAP green LED pulsing
- After numerous restarts/fiddling about I got 1.03 to detect the DVAP once or twice. Can't get a pattern to when it detects (e.g. after waiting a bit, as noted by Stefano, after running 1.02 first, etc.) If it does detect the DVAP it works fine.
- 1.02 (installed in a different directory) continues to work fine.

73,
BOb

1656. DVAP Tools 1.03

Yahoo group: DVAPDongle
Date: 2012-07-21 21:26:44 UTC
From: Greg
Topic: 1656 Message: 1656

i'm trying to install DVAP Tools 1.03 on my Windows 7 laptop but it won't run and I get a "can't find DNSSD.DLL error" I can still run DVAP Tools 1.02. Any ideas - I hate Windows.

1657. Re: DVAP Tools 1.03

Folks, PLEASE READ THE INSTRUCTIONS! This is covered in the INSTRUCTIONS.

Greg, you are not alone. This is the third email where the instructions were not followed. Sorry to make you the sacrificial lamb. :)

Hi Robin,

After 15 minutes searching the site, I still can't find the INSTRUCTIONS

I sort of assume they would be displayed in the install procerss, but they are not. Nothing about instructions on the download page, nothing in the FAQ

Where might they be found?

Do I need to uninstall the old version? Since I* don't get the "nbew hardware found" message the installation isntructions are pretty much useless.

Hi Fran. You should not see the "net send" messages constantly happening. What happens when you unplug and replug the DVAP?

The instructions were BOTH in the announcement I made AND in step 9 of "Installing on Windows" on the Installation page at http://www.dvapdongle.com.

Please read the announcement again OR read step 9. :)

Did you read Robin's email announcement? It says that if you get a "DLL not found" message that you have to install another package, and he even gave a link to the software needed.

1664. Re: DVAPTool version 1.03 network DVAP issue

Yahoo group: DVAPDongle
Date: 2012-07-21 23:26:17 UTC
From: aa4rc
Topic: 1650 Message: 1664

Ahh, yes, that is normal. There are messages sent between the client and server that will cause this printout. It is just a debug message. I'll probably remove a lot of that text once it has been sufficiently tested.

73,
Robin

From: Gregory Alan Keck
Topic: 1656 Message: 1666

Thanks for the quick response. You should know that HAMs do not read instructions. I followed them and everything works great.

Thanks

Hi Fran,

What announcement? I never saw one, just noticed the subsequent emails that mentioned a new release. If you still have a coppy of the announcement email can you forward it to me?

Thanks,

Ted W1GRI

wrote:

Hi Robin,

After 15 minutes searching the site, I still can't find the INSTRUCTIONS

I sort of assume they would be displayed in the install procerss, but they are not. Nothing about instructions on the download page, nothing in the FAQ

Where might they be found?

Do I need to uninstall the old version? Since I* don't get the "nbew hardware found" message the installation isntructions are pretty much useless.

1670. RE: [DVAPDongle] Re: DVAP Tools 1.03

Yahoo group: DVAPDongle
Date: 2012-07-22 11:10:54 UTC
From: Ted Wrobel
Topic: 1656 Message: 1670

Sorry to bother you Robin.

I never saw the announcement, just noticed mention of a new release in the recent email chatter.

Since steps 1 to six clearly didn't apply, I never got to step 9.

Thanks,

Ted W1GRI

From: DVAPDongle@yahoogroups.com [mailto:DVAPDongle@yahoogroups.com] On Behalf Of aa4rc

Subject: .RE: [DVAPDongle] Re: DVAP Tools 1.03

The instructions were BOTH in the announcement I made AND in step 9 of "Installing on Windows" on the Installation page at http://www.dvapdongle.com.

Please read the announcement again OR read step 9. :)

73,
Robin

1673. REPEAT [DVAPDongle] DVAPTool version 1.03 released

Yahoo group: DVAPDongle
Date: 2012-07-22 14:26:45 UTC
From: Dave Schultheis
Topic: 1673 Message: 1673

---------- Original Message ----------
Subject: [DVAPDongle] DVAPTool version 1.03 released
From: "aa4rc" <aa4rc@...>
Date: Sat, July 21, 2012 9:21 am
To: DVAPDongle@yahoogroups.com

Version 1.03 of DVAPTool has been released.

Changes include:

1) fixed issue where a failed connection attempt would cause further attempts to fail.

2) added network DVAP support.

The new network DVAP support requires Apple Bonjour libraries on your Windows system. These are installed when you install Apple programs like iTunes or Apple printer support. If you receive a message that DVAPTool failed to start due to a missing library, install the Bonjour print services from the Apple web site shown on the Downloads page.

Here's a copy of the Apple Bonjour link: http://support.apple.com/kb/DL999

If you would like to play with the network DVAP features, there are programs beginning with "dvservice" at http://opendstar.org/tools/. Download the version for your O/S and run it (as root if you are running Linux). Your DVAP will be announced on your local LAN (not to the Internet) and can be seen with DVAPTool 1.03.

A lot of work has gone into the network DVAP server for the beaglebone, raspberry pi, and other ARM based linux platforms. If you have one of these, you can download dvservice-angstrom.tgz and extract with "tar xzPf dvservice-angstrom.tgz". You can then plug in your DVAP and have it available on your local LAN.

The new DVAPTool software is available on the Downloads page at http://www.dvapdongle.com.

Some folks have already started using 1.03 after seeing the Tweet. Thanks for picking up the software and testing before the general release.

73,
Robin

Intresting, i just got the updated version last night, and another goodie for everyone is that it now starts up MUCH faster on a Windows XP machine, used to take almost a minute to start, now it`s just as fast as on my Windows 7 laptop, which is nice, my question is, will the network DVAP support allow me to remotely turn on and off my DVAP via my LAN or Wifi? If not that would be a cool feature, if it could somehow be implemented. Thanx! 73. N9NRA

1676. DVAPTool and dvservice.exe

Yahoo group: DVAPDongle
Date: 2012-07-23 08:32:17 UTC
From: VK5ZEA
Topic: 1676 Message: 1676

Hi Everybody,

I'm trying to get the dvservice.exe and DVAPTool combination working at home. I've got v1.03 working fine with the DVAPDongle on my office PC, running Win7. I can start dvservice.exe OK.

When I run DVAPTool on my laptop PC (WinXP), it initially comes up with a message saying that the DVAPDongle hasn't been found... then I see the "NET:AP090890" in the DVAP Device window. When I click OPEN, the associated "terminal" window indicates a lot of timeouts getting "device name", "serial number", "boot firmware version", "application firmware version", " device frequency range"...

... and then it times out and "NET:AP090890" disappears from the DVAP Device window.

Any ideas? I've both allowed dvservice.exe and DVAPTool.exe in the firewall and even turned the Windows firewall off at both ends...still no joy. Does Bonjour need to be installed on both "ends"?

Michael.

Michael, I had the same problem. It turned out to be the firewall on the machine where the DVAP was pugged in. I had bonjour running on both machines so I don' know if you need it on both or not.

From: VK5ZEA
Topic: 1676 Message: 1679

Thanks Robin and Fran,

I do have Bonjour installed on both machines...I have both allowed dvservice.exe AND tried turning the firewall off on the Win7 machine that has the DVAP Dongle plugged into it... with the same results.

My experiments will continue!

Michael.

1680. DVAP 1.03 Linux Distro Recommendations?

Yahoo group: DVAPDongle
Date: 2012-07-23 22:24:10 UTC
From: Ken
Topic: 1680 Message: 1680

Now that 1.03 is out, and has this dependency on glibc => 2.9 I can't run it on CentOS 5 anymore. So what are you Linux-heads using now?

I note that Fedora 17 is current, is that a good choice?

Ken

1684. DVAP error with Win7 64

Yahoo group: DVAPDongle
Date: 2012-07-26 05:04:04 UTC
From: w6kd
Topic: 1684 Message: 1684

Robin;

Trying to connect with DVAP on a new Ultrabook running Win 7 64. I plugged DVAP into a USB 2 Hub, drivers installed OK, and I have the flashing green LED. The DVAPTool dialog has references to the correct VCP on COM5, but I get a couple errors related to a broken DNS error dummy return and reg command failed on exit. A popup window then comes up telling me no DVAP was found, check for a flashing green LED (which I have).

Here's the dialog:

```
DVAPTool version 1.03
Restored parameters:
UserCallsign=W6KD
DVDevice=
Frequency=146550000
SquelchLevel=-80
TxPowerLevel=10
O/S: Windows 7
Ignoring broken DNS server dummy return
DNSServiceBrowse error=0 flags=0 regtype=_vcp._udp domain=
Callsign set to W6KD
Frequency set to 146550000
new frequency (146550000)
FTDI serial device on VCP port COM5
reg command failed on exit
Found 0 FTDI device(s)
Callsign set to (W6KD)
Callsign set to (W6KD)
```

The release version of the DVTool program will connect to the DVDongle, but the beta 5 gets the same DNS error and reg command fail on exit as the DVAP.

Need help getting this running please.

Regards

Bob Scott, W6KD

1685. Delay In Finding Dongle

Yahoo group: DVAPDongle
Date: 2012-07-26 16:56:49 UTC
From: Neil
Topic: 1685 Message: 1685

Hi -- I tried to set up my DVAP on my Mac (10.8 the new System) so it would startup with the computer. But when that happens the DVAP Tools 1.03 says that the VAAP Dongle is not found although the green light is pulsing. After a few minutes, however, it will find the dongle. So, looks like no automatic startup?

1686. Problems connecting

Yahoo group: DVAPDongle
Date: 2012-07-26 20:58:54 UTC
From: Edward Brown
Topic: 1686 Message: 1686

I am very new to this. I setup my DVAP to access a local repeater. I used the calculator tool in the WCS-92 program which gave me this:

RX&TX Freq: 145.67000
OperMode: DV
UR: KB2VZSBL
RPT1: DIRECT
RPT2: DIRECT

Most of the time I get "Remote System Unlinked" voice message when I key up. A few times it was "Remote System Unavailable".

I do see this in the log; not sure if it is significant or not:
Checking callsign (W2ER) against station call (W2ERP☺h☺)

I did register W2ER on the KB2VZS system. and if I try to register again it tells me W2ER is already registered.

I attached the logs below. Any ideas?

Thanks for your help.

Hi Bob. It sounds like you have been hit by the FTDI driver bug. Did you plug into a USB3 port?

The DVAPTool dialog has references to the correct VCP on COM5, but I get a couple errors related to a broken DNS error dummy return and reg command failed on exit. A popup window then comes up telling me no DVAP was found, check for a flashing green LED (which I have).

Hi Ed. It looks like you have some garbage characters in the callsign field in DVAPTool. Try selecting all of the characters in that field and delete them. Then try re-typing your callsign.

The main problem is with KB2VZS. They do not have their networking set up properly so you won't be able to connect until they fix it. Try a reflector or another gateways.

1689. Re: DVAP error with Win7 64

Yahoo group: DVAPDongle
Date: 2012-07-27 03:20:53 UTC
From: w6kd
Topic: 1684 Message: 1689

Robin;

The Ultrabook I had bought only has two USB 3.0 ports. I plugged the DVAP into a USB hub with 4 USB 2.0 ports into the USB 3.0 port on the Ultrabook, and that didn't appear to help.

I ended up taking the Ultrabook back to the store (an ASUS Zenbook UX31 for anyone else considering such a purchase) and instead bought a cheap $400 Dell Back-to-School special with only USB2 ports and it works OK.

But I think this is going to become a big problem for you--most of the 3rd Gen laptops in the store were USB 3.0 only. I'd guess you have maybe six months before nearly all the PCs sold are USB3-only and not compatible with the FTDI chip in the DVAP and DV Dongle.

Regards

Robin:

I can connect to a reflector in listen mode only. When I try to connect to K2BWK I get a Gateway Unknown. I also tried VE3RTR and got the listen only message.

I think I fixed the bad call sign. I added four spaces to the end of the call sign.

Here is the log for the connection to VE3RTR:

```

Topic: 1686 Message: 1691

Hi Ed.

I wonder if K2BWK has the same admin as KB2VZS. K2BWK also has misconfigured networking. You might contact the admin of both of those gateways.

You don't seem to be registered in the D-Star network. Until you do, you won't be able to transmit. Take a look at the instructions at http://www.dstargataway.org.

From: kiwiman168
Topic: 1692 Message: 1692

Hi. I have just installed the drivers for the dvap access point dongle no problem. tells me that the dvap is on com6.

How ever, when I try to install the dvap tool nortons internet security say's that it is a virus and removes the tool.

I am downloading everything from the dvap web site.

Cheers
Tom zl4hd

Thanks for the info on glibC - perhaps that's why I can't get it working on Ubuntu 10.10. I'll have to check the version.

While troubleshooting that, I tried 1.03 under Ubuntu 12.04 and seemed to work fine there, both on the local machine and as a network resource to a Win7 box.

Hi Tom. I use bitdefender as antivirus on my Windows developement box and it shows no issue. Norton has been known to have false positives.

Given that I've scanned it here and that no one else has reported an issue, I think it should be safe to install.

It may be Tom's particular installation of the Norton tool. I use and update to the latest Norton software on several machines on which the DVAP software is running - XP through 64 bit Win 7 - no problems with any installation or operation.

You can also upload the file to virustotal.com and it will scan it with
mutiple AV-Engines

1698. DVAP and Raspberry Pi

Yahoo group: DVAPDongle
Date: 2012-08-02 08:41:14 UTC
From: mwt2004uk
Topic: 1698 Message: 1698

Hi,

I have had my Raspberry Pi for a few weeks and am looking at using it to run my DVAP Permanently. Does anyone have a Linux ARM driver/program that will allow me to use this.

1699. Windows 7 64 device not found fix

Yahoo group: DVAPDongle
Date: 2012-08-02 18:42:43 UTC
From: aa4rc
Topic: 1699 Message: 1699

Hi folks. It seems that the FTDI driver bug that causes trashed registry entries is continuing to cause issues for DVAPTool for a small group of people. If you are experiencing this issue, please download:

http://opendstar.org/tools/DVAPToolTest.exe

and place it in the same folder as DVAPTool.exe on your PC. Then double click on DVAPToolTest and see if it fixes the problem. I'm trying to work around the driver bug.

You must have DVAPTool 1.03 installed prior to copying this into the dvaptool folder.

Please let me know...

73,
Robin

Hi Robin,

There is a removal tool on the FTDI site, that should allow users to install an older version in the meantime before they correct this issue.

We had this with the Prolific variant too, when we developed a well know scanner program, so not all hope is lost.

The USB to Serial chipset driver developers are usually quite open to suggestions when this occurs :-)

Neil G7EBY.

I would think you would be looking for "inactive" frequencies, no?

You want to use a 2m simplex frequency that is not in use so you can use your DVAP.

Hi folks. Do you all have a pref on distributions? It is somewhat difficult to create one linux version of DVAPTool and have it work on all distributions. I used to compile on CentOS but most folks are now using Ubuntu. This last release was compiled on Ubuntu 11 and that is why it is not working on Ubuntu 10.

Vote now! :)

Hi Robin:

I'd vote for Ubuntu 10, because that's what's on the box I've got it attached to :-)

Seriously, Ubuntu would be my vote. If that's acceptable, I'd argue for supporting the LTS release schedule (10.04 until next April, then switch to 12.04)

(That said, running 1.02 isn't a huge problem for me.)

Thanks for asking!

Hi Robin. I'm partial to CentOS/Red Hat, since that's what my gateways run, and my servers here at the house, and I am Red Hat certified. But that distro is getting old, and I've seen that most new hardware runs better with Ubuntu, which usually has the latest kernels and libraries, etc., and I can deal with it.

But not straight Debian or Slackware, please.... ;-)

Hi folks. It seems that the FTDI driver bug that causes trashed registry entries is continuing to cause issues for DVAPTool for a small group of people. If you are experiencing this issue, please download:

http://opendstar.org/tools/DVAPToolTest.exe

and place it in the same folder as DVAPTool.exe on your PC. Then double click on DVAPToolTest and see if it fixes the problem. I'm trying to work around the driver bug.

You must have DVAPTool 1.03 installed prior to copying this into the dvaptool folder.

Please let me know...

73,

Robin

1712. DVAPTool 1.03 on FC17

Yahoo group: DVAPDongle
Date: 2012-08-12 02:05:38 UTC
From: dsrebnick
Topic: 1712 Message: 1712

Linux FC17:

```
[myhost DVAPTool]$ ./DVAPTool
./DVAPTool: error while loading shared libraries: libpng12.so.0: cannot open sha
red object file: No such file or directory
```

Any suggestions?

libpng15 is installed, tried some symlink stuff to no avail

From: mwt2004uk
Topic: 1713 Message: 1713

I am looking at running the DVAP Tool on my Raspberry Pi. I am currently running Debian Squeezy (ARM Processor) and wonder if anyone has re-compiled the tool for ARM Processor, or if anyone has an email address so i can email the manufacturers.

1714. Newbie - Just Arrived

Yahoo group: DVAPDongle
Date: 2012-08-24 17:44:29 UTC
From: Terrence R. Redding
Topic: 1714 Message: 1714

Hi guys,

I am new to the world of D-STARS. I have a 880 and 80 mobile and hand-talki and also the DV Access Point Dongle.

The reason I am jumping into DSTARs is because it was mentioned as a system to be used with a pending ARISS that will occur the week of October 22 here in Palm Beach County Florida.

The club I am associated with, N4OLT, is providing antenna site, repeater space and a static IP address for the local D-Stars system.

I use to think I was a quick study and could learn anything. However, this D-Stars stuff is daunting.

Glad there is a group to follow. I also belong to the 880 group. If there are any others I should follow, just point me to them and I will join.

Welcome to the group!

Just for the record, it is "D-STAR." There is no second S. It stands for Digital Smart Technologies for Amateur Radio, developed by the Japan Amateur Radio League.

If you're of a mind to join a Facebook group, you can look for "D-Star Amateur Radio." Not a very busy group, but you can still learn from it.

1716. 70cm DV Access Point Dongle

Yahoo group: DVAPDongle
Date: 2012-08-25 14:37:08 UTC
From: aa4rc
Topic: 1716 Message: 1716

Hi all.

We have completed the design, prototype, and FCC/CE testing for the new 70cm version of the DVAP. It has the same red case and power levels as the 2M unit.

The units should be available through dealers the first week of October.

73,
Robin

Dave,

Thanks for the welcome. I set up the DVAP last night and was very pleasantly surprised by how easy it was to set up. Now that I can access W6LMJ A I have to figure out how to link with the IC-80AD to something beyond my access point. I am sure once that is understood I will be able to listen to nets and learn more quickly.

Now that I have W6LMJ A running, does that mean I can be called from any other D-STAR system connected to the Internet? Is my status published? Is there a place to check and see if a station is active and available? I know, all newbie questions.

Hopefully tonight I will have a chance to read more in the manual.

Again, thank you for welcoming me to the group.

Terry - W6LMJ

Hi Terry. Take a look at the "Using the DVAP" page at www.dvapdongle.com for command instructions. Also, look at the bottom of the FAQ page there for programming samples.

Your DVAP links into gateways/reflectors over the internet. It is not yet a full node that can be contacted. That is in the plans.

1726. DVAP on other VOIP networks?

Yahoo group: DVAPDongle
Date: 2012-08-26 18:51:18 UTC
From: bradlcunningham
Topic: 1726 Message: 1726

Can this unit be used with other things? Like, Echolink or IRLP? or can it only be used with the DSTAR network? I like the idea of this, but would like it to also be available for me to build an interface to connect it to other VOIP networks.

Advice?

Brad Cunningham, KL1IF
Missionary to Brazil.

Ok. I'm curious because of the USB interface. I have a 2m VoIP network here, but my current setup uses a db9 to control the VHF radio. Accessing the DSTAR network would be fun, but my main desire at this time is to increase the privacy of the radio link here... By converting our analog radios to digital.

It does FM as well so, in theory, you could use if for echolink. Writing an echolink client has been on my todo/wish list. :)

This is an attribute I poorly understand. But wow... Wow WOW, would I like to see some IRLP collaboration.

Basically IRLP requires RF entry into the network (by policy) and Dave, VE7LTD might theoretically be persuaded to collaborate. The idea is, his IRLP code is currently written for X86, and NEEDS a TRUE parallel port, so PCs are getting scarce, and a USB solution is too expensive for him to develop, nor does an ARM code version seem to be on his horizon... so Raspberry Pi or tiny cubes are not looking likely.

So... Robin could sell DVAPs and Dave could get a donation for the node number... Sounds like a win/win/win because we Dstar/IRLP(Echolink) junkies could have a great travel solution... Especially with Android code (hint...hint)

Robin,

Another thing you can add to your todo/wish list is an Ethernet interface.
We tried the Ethernet to USB adaptors with some success but a direct
connection would be much better and open of a lot of possibilities.

BTW... Will you be at the DCC in Atlanta in September?

Hi George. We have considered an ethernet interface but put that on hold given the ease with which you can connect to a Raspberry Pi or Beaglebone.

Both Moe and I will be at the DCC. Moe is giving a talk on the creation of the DVAP.

1734. Problems with DVAPUpdater v1.05

Yahoo group: DVAPDongle
Date: 2012-08-31 02:33:53 UTC
From: David_L_Merchant
Topic: 1734 Message: 1734

Hello All - I have a DVAP that I purchased about 2-years ago. I decided that I should try to update the firmware, so I downloaded DVAPUpdater v1.05. When I click on Read DVAP Info, it says opening COM5, then finished reading radio data. However, it never displays anything beyond that. I get a feeling that a pop-up window or something should appear?

Then, if I click on Update DVAP Firmware, it says opening COM5 indefinitely. The Green and Yellow LED's on the DVAP alternate back and forth, and the blue LED flickers. However, that also happens indefinably.

I'm running a modern PC (Core i7 with 8GB of RAM, and Win 7 Ultimate. Any thoughts?

1735. DVAPTool 1.03 issues on Linux Mint 13 KDE

Hello everyone.

This may have been answered already, but I did not find it in my searches.

I just upgraded my Linux Mint install for 12 to 13. I have been running DVAPTool with no problems on 12 for quite a while, but now on 13, not so much. The windows opens up without any problems, but I get "Opening device /dev/ttyUSB0" on the lower left and it never goes away.

I am not sure what the problems is, could some lend a helping hand?

73,
Shawn

Dear all,

sorry, but I recently joined this group and I have the same problem.
Could someone perhaps, who knows the problem and solution, load this up in the files section? this would avoid that people are frequently asking the same question and would be at least very very helpfull.
Thank you for your time for the one who is making this issue clear to everyone.

1737. Gateway Unknown & Check Internet Connection ISSUE

Yahoo group: DVAPDongle
Date: 2012-08-31 14:43:12 UTC
From: triptoneradio
Topic: 1737 Message: 1737

I get this message on all but one computer. I've tried two PCs and two MACs. It works on one. I am connected to the internet and I have no firewalls in place.

Do you have any insight into why I can't connect beyond this message. More importantly, how to fix the issue?

Lastly, I've tried reinstalling.

1738. Can the DVAP be damaged with external Antenna?

Yahoo group: DVAPDongle
Date: 2012-09-02 10:28:29 UTC
From: ka1mzy
Topic: 1738 Message: 1738

I had a QSO with a DVAP user who advised that he had an external antenna connected to it and after a couple of months, a chip in the DVAP quit working. He stated it was something to do with static from the antenna system and that this may not be covered under warranty.

Is anyone aware of any damage like this being consistent with the 2m DVAP? I don't want to toss 250$ down the toilet if it wont be repaired under warranty. It says in the instruction manual that an external antenna is OK.

I've had a Diamond X300 attached to my DVAP for several months without any problems and it provides WAY more coverage than I thought it would however I don't want to damage it.

Thanks, I did not find anything in here that specifically addressed this question.

From: aa4rc
Topic: 1656 Message: 1740

Hi Tony. Given that this has been discussed here before, a search of the group should find the answer. Message 1646 has the announcement for 1.03 (along with instructions for what to do if you get the missing library issue). Also, step 9 under "Installation" at http://www.dvapdongle.com covers the issue.

Rather than making you look elsewhere, here's the answer:

Install the Apple Bonjour services. Go to http://www.dvapdongle.com and click on Downloads. The last item is "Bonjour installer for Windows". Click there and follow the instructions.

Topic: 1737 Message: 1741

Hi Christian.

As others have mentioned, you may have an antivirus/firewall program that blocks the communication with the DVAP. Check to see if there is a place to create an exception for DVAPTool in your antivirus/firewall program.

In a few rare instances, the DSL/cable modem/router is actually blocking communications. Try power cycling your modem/router to see if that makes a difference.

Let us know how you get along.

From: aa4rc
Topic: 1738 Message: 1742

Hi JP. Could you point out the place in the instruction manual where it says that an external antenna is OK? I looked but could not find it.

The DVAP is designed to be used with the included antenna (or another HT type antenna). Placing it on an external antenna is done at your own risk. This is not a problem for most. Some have taken near lightning hits that caused damage to their DVAP.

1743. RE: [DVAPDongle] Can the DVAP be damaged with external Antenna?

Yahoo group: DVAPDongle
Date: 2012-09-02 13:01:31 UTC
From: Tim Hardy AF1G
Topic: 1738 Message: 1743
Attachments: 2 described; binary payloads are missing from this source WARC

Anything attached to an outside antenna can become damaged if the antenna is subjected to a lightning strike or a strike near enough to collect sufficient EMP from the lightning strike. And it doesn't have to be an antenna. I've lost more than one TV because sufficient voltage/amperage came in on the cable TV coax or phone line from a strike on a power pole down the road.

The DVAP user you talked to probably doesn't really know WHY their DVAP stopped working and just postulates that it had something to do with his outside antenna. It may be that he had a DVAP with a weak chip that stopped working after a few months. There could be several possible explanations. I use my DVAP with external antennas often and have never had a problem.

An electronic engineer friend of mine once told me that the EMP from a lightning strike is both different and worse than the EMP expected from a nuclear detonation. Even unplugging your radios/TVs from power and antenna won't protect them completely from EMP. I once unplugged a console TV from both power and cable connection when we went on vacation, only to return to find the TV dead. A neighbor told me that lightning struck a power pole a block from the house.

Using an external antenna is OK per the manual, but are any of your radios covered under warranty for lightning damage? I don't think so. If your DVAP is damaged due to lightning nearby, I would think that would be covered under your equipment insurance policy (if you have one) or your homeowner's policy. My homeowner's policy repaired or replaced everything that was damaged when lightning hit my house several years ago - less my deductible, of course.

1745. Re: [DVAPDongle] Can the DVAP be damaged with external Antenna?

Yahoo group: DVAPDongle
Date: 2012-09-02 19:43:11 UTC
From: George Jones
Topic: 1738 Message: 1745

For some time now I have run a DVAP on an external antenna but I have taken all of the normal precautions like installing a polyphaser with DC blocking in the antenna line. Even if the thing gets hit I would not expect to get a replacement under warranty since I am using it in a fashion not originally intended.

Just for information... I live in the lightning capital of the US and I run a full stack D-STAR repeater system. A couple of years ago I took a direct hit on my repeater system and suffered all of the cost for repairs myself. Icom charged me $450.00 to repair the RP2C controller.

All I can say is ARRL insurance is your best bet!

I'm aware of lightning damage, but the person I spoke to said just the antenna connection caused the damage to one of the circuits in the unit itself.

Yahoo group: DVAPDongle
Date: 2012-09-02 20:28:22 UTC
From: ka1mzy
Topic: 1738 Message: 1747

Well, he said the MFG told him it was because of the antenna itself, causing a static buildup on the DVAP. So I'm not sure if it was lightning related or moisture or what, but he told me the MFG was changing the instruction manual to specifically state no-external-antennas should be used.

1748. DVAP range

Yahoo group: DVAPDongle
Date: 2012-09-03 20:47:01 UTC
From: richardc
Topic: 1748 Message: 1748

I have been successfully been using the DVAP about 5 months.
I have been able to use it at a fair distance from my shack area, several hundred yards.
Most of the time I am using it in the shack .Now with no change, if I get out of the room where it is located I get heave r2d2. Changed antennas and computers and made no difference. The 92ad works fine as I tried it with my hotspot.
Any ideas??

Hello Rich,

What frequency are you using? Did you try another frequency? Do you know your typical signal strength coming from the DVAP? Did it change?
When you were testing with Mark yesterday, it appears that the DVAP is hearing you fine, but not the other way.

Have been working with Mark, at HRO, Atlanta, Georgia on this problem. He solved the issue. The last thing we tried was changing the DVAP frequency and that fixed it. Don't know why, but he had similar problem a few years ago and that worked. Thanks again Mark.

From: BARBARA AUBREY
Topic: 1754 Message: 1754

I have a two part question:

1) If you access a local repeater by RF and somebody else is using it (like a Conventional Double) what happens?

2) If you access a local repeater by DVAP or Dongle and somebody else is using it (like a Conventional Double) what happens?

Regards, KG4ARS

For two RF keyers, you will hear "R2D2" digital noise coming out of the repeater.

For network streams like the DV Dongle or DVAP or linked gateway/reflector, it is "first come, first served". The second keyer is ignored (until the first unkeys).

Topic: 569 Message: 1756

I followed the instruction to assign an "A" after my call sign, but the local D-STAR groups believes that can't be correct. Anyway, I have the DVAP setup with my call as W6LMJ A.

I have the 880 and the 80 and am now wondering if I can call my home computer from else where. Or do I need the Dongle to turn the home computer into a D STAR station that I can call?

My wife, W5HKY might be talked into using it if answering a D STAR call from me was drop dead simple. The problem is, nothing in the D STAR world seems to be simple.

I maintain a club station, N4OLT, and it is now also the home of K4WPB - the D STAR repeater in West Palm Beach, Florida.

Hi Terry. DVAPTool "links" into gateways and reflectors. You cannot currently make a directed call with it. You could connect to a gateway or reflector and listen for a call from another station.

YES! Using the DVAP soft ware that's on the DVAP web site, you can run as many DVAPS as there are USB ports on your computer. I've run up to three at a time with no trouble at all, which as you can imagine is a wonderful thing. Just separate the DVAPS from each other so they don't interfere with each other.

Ive never tried it but if since the hardware would connect on 2 different ports I would think so. You need to different install folders of the software. Ex DVtools1 DVtools2. The most obvious thing is they are on different frequencies as well.

Hi Terry,

You should not use "W6LMJ A" (2 spaces between the J&A) unless you add another terminal address that is "W6LMJ A" to your registration page at W4AES gateway. You presently only have "W6LMJ ".

1762. Cannot connect to repeater

Yahoo group: DVAPDongle
Date: 2012-09-12 23:16:56 UTC
From: kf4ixa
Topic: 1762 Message: 1762

Hello All,

I had an issue today trying to connect to a repeater with my DVAP. When I keyed up using the link command, I got the prompt "Remote System Unlinked". I was not linked to any node at the time. This has happened every time that I tried to connect today. I could get into other repeaters just fine.

Checking the status page for the repeater, I could see that it was connected to a reflector. Is this why I got the aforementioned prompt? I did double check my programming and everything was the way it should be.

Thanks in advance!

Eric / KF4IXA

Topic: 1762 Message: 1763

Have you ever connected to that repeater before? I believe the can set rules so dvap can't connect directly. Sometimes they do this so people will use the reflector instead of the repeater so save bandwidth. Maybe contact the repeater operator to see if such a rule is in place.

Hi Eric. Some repeaters have less than perfect internet connections. When you have a problem like this, try connecting to a reflector to make sure your network connection is working well.

I have connected before so I don't know what the problem is. It's the WD4WDW repeater in Orlando that is actually at Walt Disney World.

The repeater was connected to Reflector 30C, so I connected to the reflector myself without any problems.

I tried to connect today and the response was "Gateway Unknown". I will email the repeater admin and see what the issue is.

Hi Eric. WD4WDW is currently misconfigured. Their port forwarding/firewall config is not passing new connection requests in.

HAMRADIONOW EPISODE 20:
DVAPDongle Inventor Robin Cutshaw AA4RC is Online Now

<http://hamradionow.tv/> To say that Robin Cutshaw AA4RC is a D-STAR 'early adopter' is an understatement. He saw a lot of unrealized potential, so he tore D-STAR apart to figure out how he could make it work better. The result: software that contained utilities like Echo and Repeater ID, then hardware like the DVDongle and DVAP. Next, he added repeater linking and reflectors to D-Plus. I think it's safe to say that every D-STAR users has been affected by what Robin has created.

In this episode recorded at the Huntsville Hamfest, I have a nearly hour-long conversation with Robin on how he got started, and what his stuff does.

HAMRADIONOW is an online podcast from Amateur Radio//Video News. It's free to watch on the web. If you like what you see, we request your support. Just go to our web site, www.HamRadioNow.tv <http://www.hamradionow.tv/> , and 'click the pig.' That'll take you to the support page. Whatever you think it's worth.

Hi (didn't get your name).

Try running it as root. That will tell you if it is a permission issue.

Open a terminal window, cd to the dvaptool folder, and run "sudo DVAPTool".

Hi Greg. The Linux command equivalent to "dir" on DOS to look at files is "ls".

By default, your current directory is not in the search path for commands. You'll need to use "./DVAPTool" rather than "DVAPTool". To run it as root, run "sudo ./DVAPTool".

Default permissions on the device prevent any user other than root from talking to it.

Try (as root) "chmod 666 /dev/ttyUSB0" and that should make it available to DVAPTool.

If that works, put that command in /etc/rc.local so it executes on boot.

1777. DVAP on Android?

Yahoo group: DVAPDongle
Date: 2012-09-19 13:30:12 UTC
From: KF4IXA
Topic: 1777 Message: 1777

This question is directed to Robin (AA4RC).

I watched the interview on Ham Radio Now (great interview). Robin, you mentioned something about developing a method for connecting a DVAP to an Android phone (and possibly to iOS too) in the Ham Radio Now interview. Is this getting closer to a reality? If so, is there a time frame to availability? This means I will have to get a new Android phone... :-)

Thanks in advance!

Eric that would be so cool

[Don Weber]

Any body think of a scanning software or a

graphic which shows which reflector has the most traffic in last hour ??
ie bar graph

or a user define to watch 30 defined d-star repeaters or severs and
show minuets of traffic on them ??

Hi Eric. I'm actively working on the Android software. This will probably be
a paid program and sold through the Google Play store. It will require
Android 4.0 (ICS) or later.

Hi Chuck,
you may need to manually install the drivers, they can be
found at http://www.ftdichip.com/Drivers/VCP.htm

however if you have a pulsing green light that normally signifies that it
is running correctly. As soon as I plugged mine into both pc and laptop it
found it, recognised the dongle and installed it.

1788. feature suggestions for Robin re, DVAPTools (mabey in a feuture update?)

Yahoo group: DVAPDongle
Date: 2012-09-29 03:52:38 UTC
From: n9nra
Topic: 1788 Message: 1788

Hi there from N9NRA, i was just chatting with some folks on REF010C about the DVAPTools software, and i got to thinking again about a couple of feature ideas that i had in my head for a while, here they are,

1. Remote opening and closing of the DVAP via the RF side by DTMF. Example, user enters "xxxx (where the string xxxx is a user created passcode)12341, and to close the DVAP he enters "xxxx12340", this would be something that would be nice, not to mention convienient too.

2. Add the abaility to have a list of calls that can access a single DVAP, kinda like back in the days of packet, you could limit who could access a certain BBS to a list of callsigns, same here, instead of just the one user, a list could be created so, let`s say, you and your friends (or family) could also use the DVAP.

Just a couple of ideas i had, thoughts? 73. N9NRA, Andy

1789. DVAP Often Not Found On Start

Yahoo group: DVAPDongle
Date: 2012-09-29 16:06:59 UTC
From: Neil
Topic: 1789 Message: 1789

Hi -- I am using an Intel iMac with the latest OS and the latest DVAP Tool. However, I have had this problem with previous OSX systems as well. What happens is that I will start up DVAP Tool and not see the drivers in an empty pulldown list and I get the DVAP Dongle not found dialog box. Ordinarily if I just leave it alone and come back in ten minutes the drivers are "there:" and the Dongle begins to work just fine. Yesterday, though, I could not start the Dongle at all. I tried plugging in and replugging the usb to no avail (the green light is always slowly flashing as it should be). Restarted the computer, etc. But this time it just would not show up even after waiting a half an hour. I then reinstalled the drivers and the app. I restarted it all and I was back to it not showing up at the beginning of startup but appearing a few minutes later.
Is this normal behavior? If not, are there any troubleshooting things that come to mind? Ideally I would want this DAVP Tool to work as a startup file on the iMac without having to attend to whether or not the drivers are loaded and the device is seen. Any ideas for me? Is anyone else with a Mac experiencing this?

Hi Andy. I don't quite understand #1. You cannot send an RF command to DVAPTool until the device is open. Maybe you mean "opening" in some other way?

1791. NEW 70cm DVAP - Suggested Frequency

Yahoo group: DVAPDongle
Date: 2012-10-02 23:10:59 UTC
From: Mark
Topic: 1791 Message: 1791

I am in the process of setting up a new 70cm DVAP. Software is installed and call sign is set. What I am not seeing is a suggested 70cm frequency or frequency range to use with the 70cm DVAP. I have attempted to enter a handful of frequencies and I get an invalid frequency error.

Not sure how many people have one of these new DVAPs. Perhaps I am one of the first. Anyone have one up an running yet?

Mark

There is no "standard frequency" for DVAPs or other hotspots, Echolink nodes, etc.

Find an unused frequency in your particular area that is not in the satellite bands and enjoy the new toy.

I have a 2M DVAP and use a splinter frequency between the simplex frequencies.

From: aa4rc
Topic: 1791 Message: 1797

Hi Vic & Sally. That is the frequency that shows up if you have never run DVAPTool before.

Some folks have a 2M DVAP and now have a 70cm DVAP. DVAPTool saves the frequency that you last operated. If you swap in the "other" frequency DVAP, that saved frequency will show up as invalid.

Folks that have both 2M and 70cm will need to type in the frequency each time they swap.

1801. Getting "Receive Only" just on a single reflector -- why?

Yahoo group: DVAPDongle
Date: 2012-10-04 14:06:00 UTC
From: ajinlola
Topic: 1801 Message: 1801

Greetings all. I began operating via a new 440 DVAP yesterday after being a D-STAR registered user for about six weeks. I'm thrilled with the DVAP (thanks, Robin!), but for some reason whenever I connect to any module on Reflector 023, I find myself in receive-only mode. This doesn't happen on any other reflector that I've tried, and I connect normally when going through my local repeater (W5GAD).

Any insight would be appreciated.

Regards from New Orleans,

Andy N4ADL

1802. 2M Dvap setup

From: billroeding
Topic: 1802 Message: 1802

I am getting ready to setup my Dvap, I know I have to set the frequency between 144.1-148.0 MHz is there an easy way to determine an unused frequencies in my area or used frequencies. I know there are several websites showing what is being used, but was looking for something more definitive.

Also does anyone have a file for importing to the Icom 92AD with all of the Dvap commands?

Like what is shown here
http://dvapdongle.com/DV_Access_Point_Dongle/FAQ_files/DVAP-RS92-prog-left.jpg

Thanks,

Could you try the latest version, 1.03? Be sure to install the Bonjour component as listed in step 9 of the installation instructions.

Let us know.

Wow, this is odd...

439025000 did not work, but several choices above 440 did:

```
Found 1 FTDI device(s)
Callsign set to (W2PW)
invalid frequency 439025000
Frequency set to 441000000
new frequency (441000000)
invalid frequency 439025000
Frequency set to 446050000
new frequency (446050000)
Opening DVAP device COM8
Opened device COM8
Device name (DVAP Dongle)
Device serial number (AP700060)
Device boot firmware version (1.09)
Device app firmware version (1.06)
Device transmit frequency range (421000000 - 450000000)
Device receive frequency (446050000)
Device transmit frequency (446050000)
Finished reading from name server
Device modulation mode (GMSK)
Ascp device started
DStar name server text message received ->A new version of
.
Please check http://www.dvapdongle.com/ for the latest.
```

1806. DVAP Frequency choices and DVAP Utility Program

Yahoo group: DVAPDongle
Date: 2012-10-04 15:45:03 UTC
From: moe_wheatley
Topic: 1806 Message: 1806

Here's a simple open source utility that may be of use for selecting an operating frequency. It implements a poor man's spectrum analyzer using the DVAP. It will show any activity as well as any internal spurs or local noise that you will want to avoid.

It is an Windows only program and there is no help file but just click connect, start and play around with it.
Don't mess with the frequency calibration value unless you have an accurate frequency counter or at least write down the value so you can get it back to the factory setting.

http://sourceforge.net/projects/dvaputil/files/

Consult any band plans when choosing a frequency so you don't interfere, especially the weak signal mode sections. The DVAP may not be strong enough to interfere but the HT or mobile rig you are using can.

http://www.arrl.org/band-plan-1

Bill,

The only real way to determine if a frequency is unused in your area is to monitor it for a period of time. I have discovered a few freqs that small groups of hams (sometimes as few as two) use for local chit-chat, so I've avoided those.

You also want to avoid operating in any of the weak signal and satellite segments, as well as in the SSB segment.

I use a splinter frequency inbetween two of the common simplex channels, 146.460 and 146.490. Thus my DVAP operates on 146.475. I've never heard anyone there.

Enjoy your DVAP! I've had great fun with mine since I got it a couple of years ago.

As a Frequency Coordinator (ducking with vigor) you can check your local band plan.

Here in Texas, I like the 145.5 to 145.8 simplex slice for DVAP on 2 meters. Usually use 145.61 and sometimes 145.670.

This is a low power usage and experimental area for TX and most other places.

On 70cm - the Society had made provisions years ago for NB digital simplex between 441.100 and 441.175. I realize that that does not work for some local options. Another area overlooked is the 439.500 to 440.000 area. Listen and make sure these no links using that 500 kHz spread. this is also a good area to put xband comms on dual band rigs (using tone of course).

Look at you local bandplans and find a slice for your DVAP.

Listen first and then select a frequency. DVAP is frequency agile so just "spin the dial" if there is an incumbent who never utilizes the frequency, but speaks up when he hears something.

BTW Robin, great job on the 70cm unit!

The ARRL band plan for two meters includes this catch-all area:

145.50-145.80 Miscellaneous and experimental modes

http://www.arrl.org/band-plan-1

I've used this for my DVAP as well as simplex IRLP node and never
heard another peep on the band locally.

From: w4brz
Topic: 1802 Message: 1810

Thanks everyone for the responses. I have everything setup, but I now have a new issue I cannot figure out. I can only connect as receive only. I have registered w4brz A with the D-Star Gateway I am registered with K4CO, however when I connect up it says receive only. I first tried it with my normal call sign and that did not work either. This appears to be a common setup issue and I may just be missing something.

Thanks again,

Bill

MY new UHF DVAP (AP700012) will also not accept frequencies below 440 MHz. It initially came up on 435.5000 Mhz, and it worked there; but that frequency is in the middle of the SAT band so I did not want to use it. It will also accept a frequency of 450.0000 MHz which would put part of the signal outside the amateur band.

I am running DVAPTool v1.03

1814. Re: 2M Dvap setup

Yahoo group: DVAPDongle
Date: 2012-10-05 15:22:26 UTC
From: jess_girard
Topic: 1802 Message: 1814

Hi Tim, All:

146.475MHz is the output frequency of W1NLK/R, a 2-meter FM repeater in Norwalk CT. The various frequency-coordinating bodies have approved the pair 146.475/147.475 (1-MHz split) around several metropolitan areas.

Tim's use of 146.475MHz for his DVAP will certainly not bother the repeater users in Norwalk since he would be competing with the repeater's output, but it he tries running his DVAP in that area he's likely to be frustrated at his end since the repeater's signal could overwhelm the input to his DVAP.

Also in the Philadelphia area there's a group using the same pair (inverted) as a uncoordinated repeater with an attached Echolink or perhaps IRLP node to allow users to speak to friends and family in (I think) Puerto Rico. When we have any extended 2 meter propagation we hear them on our squelch tails in Norwalk.

In any case, please be careful about 146.475MHz. It's not a simplex frequency around urban areas.

Jess,

I doubt I'll hear the repeater down here in central Georgia, hi, but your information is well taken and filed for future use. I just added the hotspot feature to my iPhone and plan to use my DVAP mobile, since there are no useful D-Star repeaters close to me - yet!

Will be making a trip by car in the very near future to Nashua, NH to meet my first grandchild, who is expected any day now. Will probably bring the DVAP along.

With the lack of available 2-meter pairs in our state, our coordinating body has been approving odd splits for new 2-meter D-Star repeaters, so you can never be absolutely sure what you're going to run into nowadays.

Hi Tom. You only have 8 digits in the example below. Try double clicking on the frequency to select all of the digits and hit delete. Then try entering something like 446000000 and see if that works.

It initially came up on 435.5000 Mhz, and it worked there; but that frequency is in the middle of the SAT band so I did not want to use it. It will also accept a frequency of 450.0000 MHz which would put part of the signal outside the amateur band.

Topic: 1820 Message: 1823

Hi John. Make sure you are running DVAPTool version 1.03. Also, plug in directly to the computer, not through a USB hub. I just purchased a cheap USB hub and the DVAP doesn't work properly through it.

When you click "Open", the terminal window (DOS window) will show the valid frequencies for your device. What does your say?

Thanks Robin. Am running directly to the PC; no hub. Using 1.03. DOS Window shows Device Transmit Frequency Range as 421-450. When I put in anything outside of 440-450, frequency input box goes blank and DOS window says Invalid Frequency. Odd. Any ideas?

73s.

Hi folks. I found the issue. When we first designed the 70cm DVAP, it was for 440-450 MHz only. Once the prototype was built, we found it could do 421-450 MHz. DVAPTool 1.03 still has the old frequency range.

A new version of DVAPTool will be out shortly.

Thanks Robin. 440-450 was such a clean delineation in terms of what was working and what wasn't, that it felt like a software issue. Glad to hear that is. Great unit; looking forward to the new DVAPTools. Thanks for making the D-Star experience even better with the DVAP. 73s. --John AA6JN

Join us for dinner this Friday at 5pm. If you are interested in D-Star, MotoTurbo or digital voice of any kind, you'll want to be there.

Like last year, we are meeting across the street from the Marriott at IHop. . Some may not know they have more than breakfast and pancakes. They have all kinds of entries, plus sandwiches and burgers. For example, http://www.ihop.com/menus/main-menu/dinner-favorites

Plus, you can keep your car parked at the Marriott and walk to the IHop.

IHOP
4200 Great America Parkway, Santa Clara, CA (across the street from Pacificon)
Friday October 12 at 5pm

I've reserved the back room - come on over and have some fun!

PS the D-Star Panel at Pacificon will be in Salon E on Saturday at 3:30pm. Robin AA4RC, John K7VE and I will be talking about the latest in D-Star.

1835. DVAPTool Not Opening - Ubuntu 12.04.1LTS

Yahoo group: DVAPDongle
Date: 2012-10-12 17:21:01 UTC
From: jpthegeek
Topic: 1835 Message: 1835

Greetings!

Recently rebuilt my workstation with a fresh Ubuntu 12.04.1LTS build.

Prior to this, was running DVAPTool with no issues on the old iteration - 12.04LTS.

Removed BRLTTY and Googled around but have not found anything that resembles what's going on.

DVAPTool application 1.03 extracted to desktop. Double clicking the app or running as Root from CLI fails to even open the app.

Pulsing green light on a connected 2M DVAP.

Anyone seen this? I'm sure I am missing something obvious, though I'm not sure what.

No luck on previous versions.

Still no luck running as root.

Literally nothing happens when I attempt to launch save for 'ksoftirq' appears in the TOP/HTOP list then disappears.

Anyone ever seen anything like this?

Robin,
Thanks for your reply.

Being blessed with only one (singular)active braincell I've decided to stick with that Russian analogy ... If it's not broken, don't! fix it.

Your software works perfectly on all 56 DPLUS reflectors (hardly surprising, since *YOU* wrote it)and that's good enough for me.

I was just curious to try connecting to a couple of other Russian stations (I've worked the obligatory one whom appears on REF001 from time to time) but I thought I'd try my 2 x sentences of Russian 'live'
on D-Star but I can't seem to connect to them (they use that 'other' system).

Never mind, as I said, the 56 x DPLUS reflectors are more than enough to keep me out of mischief for the forseeable future.

Looking forward to you Android offering for Christmas ... wheelchair mobile (without the laptop) on Frei Island.

Have a good one Robin and again thanks for your superb efforts.

73 John.

Wow, why didn't I think of that? I just swapped cables and it seems to be OK. Because it was intermittently bad I can't be certain until I have used it a few more times but I bet that was it. Thank you!

Hi Neil. Are you plugging in directly or using a hub? Try direct if you are currently using a hub.

If it is still not working, send me a direct email and we'll arrange to take a look at it.

1846. DVAP - 2 meter or 70 CM?

Yahoo group: DVAPDongle
Date: 2012-10-18 14:53:08 UTC
From: KC9IL
Topic: 1846 Message: 1846

This might be a silly question, but if I don't own a UHF-only radio, would I be better off getting a 2 meter DVAP due to its better range than 70 cm? Are there any additional benefits to the 70 cm version over the 2 meter one?

Thanks & 73,

Warren

Depends on your locality. Things like local band usage or QRM have to be taken into consideration.

If for instance, you have some of the dreaded Gigabit PLT devices nearby, they can swamp the 2M band when transferring at full speed, so its worth checking before you buy. This is not an issue on UHF (yet). (They radiate at around 2-380MHz full tilt, here in the UK at least.)

Other than that, the only benefit I can see is being able to have a higher gain and/or smaller antenna on a handheld using UHF.

I have had the 2M one for a while and find it superb for testing/hotels etc. As I ran a fully blown 2M hotspot at my old QTH, I would of liked to of had a UHF one for testing also.

From: Neil
Topic: 1841 Message: 1849

Hi Robin -- Plugged in directly, no hub. I got your email about offering to take a look at it and thanks. But it is now working 100% on my Windows 7 laptop although still failing 99% of the time on the Mac. So, I don't think the dvap is defective although there is some sort of problem with the Mac for sure. I have even tried starting the Mac in safe mode so that only Apple-approved extensions are running and it still does the same thing. So it might be a problem with the new OS. But as long as I have it going on the laptop I might as well just keep it there instead of on the Mac. Out of curiosity have you tested this on Mac OS X 10.8.2 as yet? Anyway, thank you for the support and unless you want to actually examine the dvap I'd rather just stay on the "air" with it on the laptop instead of losing it for a few days or more. Thanks!

From: albertkarel
Topic: 1857 Message: 1857

I chased the UPS guy down this afternoon to take possession of my new 440 DVAP. With only a 31a, I previously was forced to put a "hotspot" together. After the initial agony of setup, it worked well and did a good job during the recent DSTAR QSO party.

That's why I was amazed at how excellent the "user experience" is with the DVAP. Almost instant execution of DSTAR commands (there was a considerable delay with my hotspot), many excellent reports on the audio, seamless installation and operation.

THANKS for all your work on DSTAR, but for now, the biggest thanks is for this excellent piece of equipment.

My mobile phone contract is up for renewal now and I can choose almost any phone I like. I currently have a nokia n8 which cannot run your dvap. I am not keen on the new lumia series either as they run windows/7/8, again wont run with the dvap.
I would like some advice from you what phone I would need or operating system I would need that can run.....without any problems the DVAP, whether that be android/iphone* or whatever. What version of android for example. Obviously it would also need a usb socket to.

Your advice will be appreciated.

1860. DVAP Dongle not found error

Yahoo group: DVAPDongle
Date: 2012-10-28 09:30:16 UTC
From: Nik Presser
Topic: 1860 Message: 1860

G'day all on the DVAP list,

I've just changed over to a new laptop - Toshiba running XP sp3

I've searched through various messages on this list but can't find my problem.

I've carried out the install as per
http://www.dvapdongle.com/DV_Access_Point_Dongle/Installation.html then had to go here
http://www.ftdichip.com/Drivers/VCP.htm for the FTDI driver. I also had to go here
http://support.apple.com/kb/DL999

The green LED on the DVAP is now slowly pulsing on and off ok. When I go to fire up the DVAP Tool v1.03 I soon get an error "DVAP NOT FOUND" error.

Any ideas??

Thanks.

Cheers,

Hi Nik. I recently had the same problem which was tracked down to a USB hub. If you are using a hub, try plugging in direct. If you are direct, try a different USB port.

Also, you might try http://opendstar.org/tools/DVAPToolTest.exe. Place it in the same folder as DVAPTool.exe and double click on it.

1866. Gateway Unknown

Yahoo group: DVAPDongle
Date: 2012-10-30 17:24:36 UTC
From: haroldclifford@ymail.com
Topic: 1866 Message: 1866

I just received my 20M DVAP and I have a couple of questions,.

1. No matter what London reflector i use from this page

http://www.dstarinfo.com/reflectors.aspx

I always get "Gateway Unknown". I have a ICOM 80AD. The only way i can talk to the UK is when they show up on another reflector.

2. I cannot use the I, E and U command. To unlink I have to use the DVAP TOOL Force Disconnect tab.

I tried to go by the DVAP SETUP instructions which said that i must set them in the 8th position. My 80AD does not allow any input past the 6th position. Is there a way around this.

Many thanks,

Harold (K1FFD)

Hi Harold,

All Icom radios have 8 positions in the four user programmable sections of; YR:, RPT1 and RPT2, the MY: setting has 8 plus the four after the '/' for a short name or operating condition of your choice.

You just need to scroll through with the > (or 6) key to get to the 7th and 8th positions.

The system in use means that you 'dial' the Reflector (or repeater) in the YR: field by programming the callsign, band module then a Link command, like:

YR:REF005AL

Or:

YR:GB7OKC L (Notice the space in the 7th position.)

Then once the link is made (you should get a voice prompt saying 'Remote system linked), you go back to the normal 'chat' (YR:CQCQCQ) to talk normally.

(Its probably worth saving these as a different memory channel than the normal 'chat' channel of "YR:CQCQCQ" so you don't have to keep reprogramming the radio each time.)

The RPT1 and 2 remain the same as long as you are on the same system, your DVAP in this case.

MY: remains as your callsign as long as you own the radio and doesn't change for as long as you own that radio :-)

Neil G7EBY.

Hi All,

I am new to Linux and OpenSUSE, in particular. But I am wondering if there is anyone who can direct me in how to install DVAPTool in Linux. Any help would be most appreciated!

Peace,
Stephen

Well i finally figured out that using the angle key (>) you have to be careful just how many spaces you use. I was using too many !!!

Anyway the only letter i really need is the U key to unlink with and doing it the way you described works great. The E and I key doesnt work using this procedure for some reason.

Many thanks Neil,

Harold

Hi Cameron. If you haven't installed the latest drivers already, go to www.ftdichip.com and click on Drivers and then download/install the latest VCP drivers.

Let us know if that helps.

Hello All,

FWIW ....

I know the definition of insanity is doing the same thing over and over again and expecting a different result, but it has been my experience (on Mac OS X.7.5 and Ubuntu Linux 12.04) that it can take a few tries before the DVAP Tool "finds" the DVAP ... even though the green light is in slow pulse.

Just a thought ...

I think there is a definite problem here with Mac OSX (10.3.2) and the DVAP dongle. As you know, I was experiencing this also and was not using a hub and using the latest drivers on my late 2009 Intel iMac. Before 10.3.2 I noticed what Stephen here reports: The software did not see the DVAP nad if you tried many times in a row it usually did find it. However, once I went to the latest Mac OS this was no longer true. Once it "lost" the DVAP starting and restarting, trying over and over had no effect. It was never found. As you know I finally decided to ditch using the Mac and went to using my PC laptop. Otherwise I never would have got this to work again. You really have some sort of problem with the Mac that was present in an annoying fashion on previous Systems but appears to be catastrophic for some users on the newest System.

1882. DVAP 440 & repeater configuration

Yahoo group: DVAPDongle
Date: 2012-11-08 21:06:25 UTC
From: dawes.john@rocketmail.com
Topic: 1882 Message: 1882

Hello all

I have a DVAP 440 and it is great (thanks Robin). I am using an ID-31A and an IC80AD and have accessed repeaters and reflectors using the DVAP 440. However, I have a new issue which has arisen and which I havent' n been able to solve. With the ID31A , when I enter a simplex frequency into the radio (from group 20) and then try and change the TO setting to our local Port B repeater, VK5RWN B, the TO setting does not change but switches to CQCQCQ.

The moment I change the FROM setting to VK5RWN B I can enter any other repeater into the TO setting. I have been able to access the local repeater using the DVAP and the ID31A a couple of days ago, but it seems I have changed a configuration setting and can't work out which one. There is no problem with reflectors. I set the simplex frequency in the FROM setting and then using the CS button and go to YOUR CALL SIGN and select the appropriate reflector. When I try and do the same thing with a repeater 'Gateway CQ' the radio beeps and nothing happens.

Any advice will be greatly appreciated.

1883. Dongle/radio not talking to each other

Yahoo group: DVAPDongle
Date: 2012-11-10 04:33:58 UTC
From: zl2arn@xtra.co.nz
Topic: 1883 Message: 1883

Hi guys,

Just a quick note re this subject. Some of you may be having similar problems.
My 70cm dongle was working nicely for the first week, then it stopped talking to the radios. (ID-31A & ID-880H) ??
After much investigation and testing, Robin suggested I try +/-5Khz settings in the DVAPTool. And yes there was the problem, the dongle and radio were some 7KHz apart.

1. You can do a simple plot of frequencies by moving the DVAPTool in 1KHz steps each way and plotting where your radio stops responding. Or

2. You can use Robins very neat DVAPUtil software which has a Spectrum Analyser display, and you can see immediately where you are.
With very careful adjustment you can move your dongle frequency to align with your radio.
But make sure first you know what your frequency is by using a calibrated frequency counter.

My dongle and radio are now on the same frequency and working perfectly.

1884. Robin - any news on the DVAPTools ARM port?

Yahoo group: DVAPDongle
Date: 2012-11-11 16:41:18 UTC
From: kd4ebm
Topic: 1884 Message: 1884

Hi Robin:

Just wanted to see if there's any news you can share, and to offer my opinion that if you wanted to offer an ARM port as an unsupported/beta option, I'd be all for it.

Understand the support issues that can crop up with more exotic implementations (e.g. Raspberry Pi) might not be worth the audience supported.

Hi Bob. For now, the only ARM based program is the network server daemon. It allows you to plug in the DV Dongle or DVAP to an ARM/Linux device and use it/them over your local area network. You still have to have a PC or Mac for the main program though.

Hi guys. Try adjusting the frequency up/down by 1-5 kHz in DVAPTool and see if that makes a difference. If it does, you may need to recalibrate the DVAP frequency with DVAPUtil.

1890. Quick Disconnect...suggestion for future versions of Dongle and DVAP software.

Date: 2012-11-16 05:40:11 UTC
From: albertkarel
Topic: 1890 Message: 1890

Thanks Robin for a great DVAP....the 440 has been rock solid
and a joy to use.

My Question:

I wonder....why do we have to "Disconnect" on DSTAR, either on DPLUS,
Dongle or DVAP?

Is it possible that you could just program it so that when I issue a Link command, the
system assumes and understands that I want to disconnect from any existing link?

Thus, if I am linked to REF 12A, and I agree to QSY to 30C...
why can't we just issue a link command to REF030C?....why do we
have to first disconnect? Can a direct link capability be
built in to the DSTAR structure that sees the existing link and automatically unlinks it
and then carries out the new link command?

THANKS for any thoughts you may have.

Hi Dave. There is nothing special about the provided cable. I have seen some cheap cables that did not have a sufficiently long mini connector to go into the unit fully.

Hi Al. The software was designed to function similar to when you work a repeater. Multiple people can connect with and use the DVAP at the same time, just like a repeater. One user may not know that another user has linked to a gateway/reflector so the software will tell them if they try to link while already linked.

1894. DVAPTool version 1.04 released

Yahoo group: DVAPDongle
Date: 2012-11-19 21:04:23 UTC
From: aa4rc
Topic: 1894 Message: 1894

Version 1.04 of DVAPTool has been released.

Changes include:

1) fixed issue where the device would sometimes not be found (works around the USB3 FTDI driver bug and a race condition on Linux).

2) expanded the 70cm support to include frequencies 421-450 MHz.

The new network DVAP support requires Apple Bonjour libraries on your Windows system. These are installed when you install Apple programs like iTunes or Apple printer support. If you receive a message that DVAPTool failed to start due to a missing dnssd library, install the Bonjour print services from the Apple web site shown on the Downloads page.

Here's a copy of the Apple Bonjour link: http://support.apple.com/kb/DL999

For Linux users, this release was built on Ubuntu 10.04 LTS 32 bit and tested on 10.04 32 and 64 bit, 11.10 32 bit, and 12.04 32 bit. Make sure you take a look at the readme.txt file in the DVAPTool folder for installation requirements/instructions.

The new DVAPTool software is available on the Downloads page at http://www.dvapdongle.com.

73,
Robin

Topic: 1894 Message: 1895

The new 1.04 tool has fixed the recurrent problem on my Intel iMac (10.8.2), thanks! I think, tho, I may still keep the dongle mostly on the laptop PC as I have grown attached to the log-in data on the PC's DOS terminal screen as the dongle finds its way online. If there is ever a way you could include this logging-on data on the Mac version of the Tool that would be great! Thanks again.

1898. Re: Quick Disconnect...suggestion for future versions of Dongle and DVAP software.

Yahoo group: DVAPDongle
Date: 2012-11-20 22:10:02 UTC
From: albertkarel
Topic: 1890 Message: 1898

Hmmmmm.....It never occurred to me that more than one person can use a DVAP at a time.

I surely do not comprehend the complexities of this wonderful device....so I just go back to my request that a "Quick Disconnect" be incorporated into each Link command. When one is ignorant (not stupid, mind you) everything appears simple!

So, in my simple world, if I am linked to 12a and want to hear what's going on on 30c....I just send REF030CL and the system understands that by that I mean:

IF not linked, THEN REF030CL
IF already linked, THEN UNLINK and REF030CL

Perhaps 2 commands simply cannot be given the system in one command.

If it could be done, tho, the number of UNLINK commands would drop by 90% or more, and linking transactions would be far more efficient for the operator.

THANKS

1899. Not Connecting to USB Device

From: bryanbeam
Topic: 1899 Message: 1899

I've been using my DVAP without any problems. I moved my computer and reconnected the DVAP and now I get this message when I open the connection. "It looks like you are connected to a USB serial device other than the DV Dongle. Please check the device com port."

The only thing I can think of is I plugged into a different USB outlet on my computer. I've tried all of them and still get the message.

I'm using DVAP Tool version 1.4.

Any ideas??? Thanks in advance for any assistance.

1901. Installing on Windows 8

Yahoo group: DVAPDongle
Date: 2012-11-22 17:37:49 UTC
From: dubinky10
Topic: 1901 Message: 1901

I can only figure that this must be because I'm using windows 8.
I installed DVAPTools but it won't run.
First it said I was missing FTD2xx.dll, so I downloaded it.
Then it said I was missing dnssd.dll, so I downloaded it.

Now it says "The ordinal 79 could not be located in the dynamic link library c:\program files\dvaptool\dvaptool.exe

Any ideas?

1903. Connection issues DVAP 440

Yahoo group: DVAPDongle
Date: 2012-11-23 14:14:21 UTC
From: vk2war@rocketmail.com
Topic: 1903 Message: 1903

Hi People,

I received my DVAP 440 about two weeks ago. In all that time I was unable to connect my ID-31A to the closest repeater or any reflector.

I spent countless hours trying everything.

In the end it turned out to be my Billion 7800N (touted to be the best modem/router you can get) that was the problem.

Now I tried allowing port 20001 in. I checked out all the connection ports the DVAP was using in and out. I added the ports to my firewall.

Nothing seemed to work, and I am totally uneducated in NAT so struggled with that.

Whilst changing my settings on my Billion 7800N I accidentally reset the modem. I have a Pocket wifi modem that I use whilst on the go. I connected the laptop to the pocket wifi and all of a sudden DVAP worked,

I went back to the Billion 7800N and in the end I just could not get the DVAP to connect to a repeater or reflector.

I gave up and purchased a NetGear D3000 and within 5 minutes I had the DVAP440 working like a trooper.

So people of you are getting a constant "Ignoring Transmit" error. Check your modem, change your modem and make sure your windows firewall or other firewall software is not blocking the DVAP from connecting.

Hope this helps

Jason

Well, I admit that I didn't look up dnssd.dll since I had already looked for ftd2xx.dll and didn't find it.
Problem is, I had already installed the bonjour stuff and it didn't change anything.

Any other suggestions?

Thanks!

Hi Ionut. DVAPTool was compiled and tested on Ubuntu. You might try that. The "AMBE out of sync" message indicated that data is being dropped between the device and the program. That is usually due to inadequate hardware or other programs running that are preventing DVAPTool from getting sufficient CPU cycles.

From: YO9ION
Topic: 1907 Message: 1909

Hello, Robin
I will try to see exactly where is the problem, I was curious about the 2 errors:
- Qt: Session management error: None of the authentication protocols specified are supported
- DNSServiceBrowse error=-65563

Thank you,
Ionut YO9ION

--- In DVAPDongle@yahoogroups.com, "aa4rc" <aa4rc@...> wrote:
>
> Hi Ionut. DVAPTool was compiled and tested on Ubuntu. You might try that. The "AMBE out of sync" message indicated that data is being dropped between the device and the program. That is usually due to inadequate hardware or other programs running that are preventing DVAPTool from getting sufficient CPU cycles.

1910. Running 2 Dvaps on one computer

Yahoo group: DVAPDongle
Date: 2012-11-27 00:50:15 UTC
From: n1toq@arrl.net
Topic: 1910 Message: 1910

Does anyone know if its possible to run a 70cm and a 2 meter dvap on the same computer at the same time? Thanks and 73.

Yes, if you run two different applications/programs.

1912. Re: Installing on Windows 8

Yahoo group: DVAPDongle
Date: 2012-11-27 03:38:32 UTC
From: aa4rc
Topic: 1901 Message: 1912

I just installed Windows 8 64. I plugged in the DVAP and it automatically loaded the drivers. I then installed the Bonjour Services (not just the dll). When I installed DVAPTool 1.04, it came up and worked perfectly.

The only change I made to the system was to disable windows firewall for all profiles.

1913. DVAPTool - Linux compiled for RPi?

Yahoo group: DVAPDongle
Date: 2012-11-30 04:23:46 UTC
From: w4oa.mitch@ymail.com
Topic: 1913 Message: 1913

Is the DVAOTool - Linux compiled only for Intel processors? Is there a binary for the Raspberry Pi?

Any other way to use the DVAP with RPi?

Any suggestions welcomed!

From: Rubens
Topic: 1914 Message: 1914

My dvapdongle VHF is working, nothing of the windows no longer recognizes the card, now swapped cable, since I changed computer and does not recognize the DVAP.
On board the LED blinks green and blue LED always on.
What can I do to fix the problem?
Or send to exchange bought the site hamradio.com

Who can help me?

Rubens PU2LRZ

Hi Rubens. It sounds like some program has opened your DVAP and is sending data to it. Make sure that you don't have another program running that uses USB devices (like a hotspot). Also, make sure that you are plugging the DVAP directly into a USB port and not through a USB hub. We've seen some hubs that cause problems like these.

Thanks fRobin, or the reply, do not use hub, is connected directly to my PC. When I connect to the computer it is connected with Led Blue and green LED blinking, and windows no longer recognizes the device.

Have you tested it on two computers and presents the same problem.

what else can be done?

Ahh, that is actually the blue and yellow lights (hard to tell through the red case). The green LED pulses slowly at the top right of the case.

Something is transmitting/receiving constantly. Those LEDs are connected to the USB tx/rx from the computer.

Have you tried a different cable? Also, make sure you have the latest drivers from www.ftdichip.com (the VCP version).

If that doesn't resolve it, you can send it back to HRO for an exchange or send it directly to me and I'll take a look at it. You can email me directly for that.

From: mike_kj6tnn
Topic: 1918 Message: 1918

I have a DVAP Dongle that is about 6 month old. It worked very well with my IC-80D. I upgraded to release 1.04. Now I dont think my transmissions are getting out. When I connect to the PC the voice replys "System Linked Reveive Only".
Has anyone else had this kind of expreiance?
Can this be fixed?

Thanks

Hi Mike. Receive only happens when the callsign you are using is not registered. That includes the terminal registration which you use in the 8th character of both mycall in the radio and the callsign field in DVAPTool.

1920. Odd issue: 440 DVAP & ID-31A - doesn't accept I or E command

Yahoo group: DVAPDongle
Date: 2012-12-03 04:56:32 UTC
From: k6brr
Topic: 1920 Message: 1920

Hi All

I scanned the posts and didn't find anything exactly like this.

I'm trying to help a buddy in another state get his ID-31 & 440 DVAP working. I've never actually touched an ID-31 so that presents a bit of a challenge but we've made pretty good progress but hit a minor impasse this afternoon.

We've setup 5 channels using the DVAP's base frequency of 435.500 under the (as I recall the syntax) Repeaters option 20 Simplex section.

These are the YOUR entries:
Channel 1 - CQCQCQ
Channel 2 - xxxxxxxU (where x is a space)
Channel 3 - xxxxxxxI
Channel 3 - xxxxxxxE
Channel 5 - REF014CL

No entries in REF1 or REF2

The DVAP responds to CQCQCQ with the usual beep.
The DVAP responds to the xxxxxxxU <Unlink> with "Not Currently Linked" as it should
However there is no response from the I or the E command - nor does it link to REF014.

I've had him double check the character count of spaces before the commands and verify that we're in DV mode and that the frequency is the same for all the channels.

Any ideas appreciated. I'll get him on the forum tomorrow to simplify the communications.

Thanks & 73,
Dana

Hi Dana. Use "DVAPxxxI" and "DVAPxxxE" (where x is a space) to issue commands to the DVAP.

When in doubt, check the instructions at http://www.dvapdongle.com. The above issue is covered there on the "Using the DVAP" tab in the "Radio Command Reference" section.

Yahoo group: DVAPDongle
Date: 2012-12-03 15:32:08 UTC
From: aa4rc
Topic: 1918 Message: 1923

Hi Mike. Here's what your registration looks like:

USER REGISTERED AT GATEWAY
[KJ6TNN] [WB6BA]

TERMINAL LAST HEARD GATEWAY
[KJ6TNN A] [KJ6TNN A]
[KJ6TNN B] [KJ6TNN B]
[KJ6TNN C] [WB6BA A]
[KJ6TNN D] [KJ6TNN D]

You are missing the "space" terminal. Take a look at the instructions at http://www.dstargateway.org for instructions on adding the "space" terminal.

If you always use an "A", "B", "C", or "D" in the 8th character of callsign/mycall like above, you won't have an issue. I see from the logs that you are also using a "space" in the 8th character of the callsign field in DVAPTool. You have to register that "space" to use it (or use one of the characters above that you already have registered).

Robin

That's the format we used in the Display field - I'll do the same thing in the YOUR field.

I'll forward the link. http://www.dvapdongle.com

By the way I have 3 of the 2M DVAPs - The DVAP dongle is among the most useful and fun ham radio items that I've purchased - and I have a lot of toys.

Thank you for the superb product design and ongoing support.

1925. Re: DVAP Dongle

Yahoo group: DVAPDongle
Date: 2012-12-05 01:23:50 UTC
From: mike_kj6tnn
Topic: 1918 Message: 1925

Hi Robin
I feel like such a dope. This can not be that hard, this is what I have done so far...
I went into the registration pages and reconfigured as your log shows;
[KJ6TNN A] [KJ6TNN A]
> [KJ6TNN B] [KJ6TNN B]
> [KJ6TNN C] [WB6BA A]
> [KJ6TNN D] [KJ6TNN D]

I could not make any contacts using my ID80 HT. I tried the DV Dongle with no success. I followed your instructions you provided on adding the space.

The DVAP links but the transmission does not go through.
I checked the MYCALL on the HT. It reads KJ6TNN (No Letters after the call sign so it would show as a blak in the 8th position?)

I am thinking that I must add a letter in the 8th place in MY CALL. Is this true?
So I reconfigured my registration page to read:
KJ6TNN A kj6tnna-DVAP
KJ6TNN (Space 8th) kj6tnn-ID80
KJ6TNN C kj6tnnc-dvdongle

It links up but the transmissions do not go through. Please help me. What am I doing wrong?

Thanks
Mike - KJ6TNN

1926. DVAP on Raspberry Pi?

Yahoo group: DVAPDongle
Date: 2012-12-05 06:07:11 UTC
From: w4oa.mitch@ymail.com
Topic: 1926 Message: 1926

Robin,

I have the 70cm DVAP and ID-31A, and am having a ball!!! Great product and very easy to use.

I would like to make a portable hotspot using a Raspberry Pi and the DVAP, with the hotspot on my cell phone providing the internet connection. The Raspberry Pi with wireless adapter works great with my cell phone for surfing the web.

Have you any plans to compile the DVAPTool for the Raspberry Pi?

Thanks,
Mitch W4OA

Once you are linked up, in order to transmit you must switch the "URCALL" field to "CQCQCQ " (transmit to a connected system). I hope that helps. 73

From: aa4rc
Topic: 1918 Message: 1928

Hi Mike. Bob Lucas brought up a good point. Make sure that you have switched back to "CQCQCQ " to talk.

I just looked up your registration and the "space" entry has not made it out to the network. Until it does, you will have to use the "A", "B", "C", or "D" in the 8th position of the callsign field in DVAPTool as well as the mycall field in your radio.

Check back with the gateway where you registered to make sure that space entry is there. Also, if you know the admin of the gateway, ask him to check to make sure his system is syncing with the network.

Hi Geoff. Please read the installation instructions. They discuss this very issue. It has also been discussed here many times and is discussed in the release announcement in this group.

Hint, follow step 9 in the installation guide at www.dvapdongle.com.

Hi Robin

Only just joined the group, so didn't see previous posts. Thought that as 1.02 was already installed that 1.04 would just update the existing installation. Step 9 fixed the issue thanks.

Hi
Make sure you completely delete the old version, plug in the dongle to your USB first and xp should look for the software automatically. I had the same problem because I installed the software first then plugged in the dongle and got errors with .dll files missing.
Good luck
Steve G4NHP

Hi J.D.

When you try to link to a reflector, what do the mycall/urcall/rpt1/rpt2 fields in DVAPTool show?

If there was a problem with your internet connection when you clicked "Open", it would not have received the reflector list. Try clicking "Close" and then "Open" again to refresh the list.

Many thanks! It appears that there is a LOT of interest of using the RPi and DVAP with a cellphone for a portable D-Star hotspot. Also, it will be nice to just set the RPi and DVAP in the shack for the shack connection.

I agree with using the RPi as the host computer in the shack. It would be nice to just have it running all the time without having to run the software on my main computer. The price of the RPi makes them great single use computers.

1943. "Dropping Extra Voice/Data Packets"

Yahoo group: DVAPDongle
Date: 2012-12-18 21:47:19 UTC
From: brian95008
Topic: 1943 Message: 1943

I just loaded DVAP ver. 1.02 on my new Win 8 machine and now when transmitting I'll occasionally see an error on the DOS screen that reads "Dropping Extra Voice/Data Packets". This setup was working great on my old Win 7 PC.

Any ideas on what would be causing this?

Hi Brian. You should be using version 1.04 of DVAPTool. The "extra" packets are normal and can be ignored. The UDP protocol can have duplicate/out of order packets. It doesn't hurt anything in DVAPTool.

Thanks, Robin. I loaded ver 1.04 and all seems to be working fine. BUT, I do see on the DVAP Version 1.04 screen some words in-bedded in the program are cut-off. Like "Station Callsign" is missing the "gn". "DVAP Device" is missing the "ce". "Force Disconnect" is missing the "F".

Is this a known issue?

I've also heard from another user on Win. 7 he's seeing the same thing.

Hi Brian. If you increase your default font size in Windows, it will cause problems for DVAPTool.

1947. "D-STAR Live", December 29th on W5KUB.com

Yahoo group: DVAPDongle
Date: 2012-12-20 01:00:42 UTC
From: wb4qdx
Topic: 1947 Message: 1947

W5KUB.COM presents a special live video broadcast, "D-STAR Live", on December 29, 2012 from 10:00 AM until 4:00PM Central time (1500 until 2100 UTC). The live Internet broadcast will feature many D-STAR topics discussed by Ray Novak, N9JA, of Icom, Robin Cutshaw, AA4RC, co-creator of the DVDongle, DVAP and D-Plus, John Davis, WB4QDX, frequent D-STAR speaker and trainer, and Ed Woodrick, WA4YIH, of DSTARinfo.com and the D-STAR Calculator.

The broadcast will also host live chat for questions and comments and will feature a live D-STAR net on the air. For more information, check out www.W5KUB.com.

Brad,

I would think that is true if your local gateway block DVDongle users as we do. We don't do this because we don't want them. We do it because of limited bandwidth and most of our repeaters are connected to a reflector. Reflectors have n=much more bandwidth than repeater gateways.

If you are concerned about not be able to use your DVDongle on your local repeater, I would contact the admin to find out if you can before buying it. Otherwise, there are plenty of places you can connect to use it.

I hope I am not completely misreading or misunderstanding your question, but you do not have to rely on someone else any more than you would if you went to Ham Radio Outlet or Amateur Electronic Supply (or others) and bought a new radio.

As long as you are a registered D-STAR user, and that process is relatively simple, and you understand the FCC rules, you should not have to get permission from anybody else.

If I am wrong, I hope I can rely upon someone on this list to correct me in a pleasant and educational manner.

Brad,

The DVAP dongle gives you the ability to connect, via the Internet, to any D-Star repeater with a Gateway and any reflector. You don’t have to even have a local repeater. You normally register your callsign with your nearest D-Star repeater, but you can also register elsewhere if your nearest or local repeater owner is resistant. You will find that the store where you purchased your DVAP will register you if you ask them. Once registered, you will be able to enjoy the full functionality of your DVAP. I’ve owned one since they came out and have thoroughly enjoyed it.

Brad:
I think you will find that most D-STAR repeater operators will allow a limited number of simultaneous Dongle or DVAP users to connect directly to a repeater. By default, the DPLUS software running on most repeaters to support Dongles and DVAPs allows up to four direct connections. Systems can increase or decrease that number depending on their Internet connections.

Keep in mind that if a particular repeater is linked to a reflector, your direct link to that repeater is also connected to the reflector. If you know that a local repeater normally links to a reflector, it would be best for you to connect directly to that reflector since reflectors have much more bandwidth to handle many connections.

I also confirmed that your callsign is already registered on WO0MD with a terminal added so you should be good to go anywhere. Have fun on D-STAR!

Hello,

for those of you running Raspberry Pi with dvservice what distribution have you loaded? I downloaded Raspien and dvservice is unable to load libdns_sd.so.

Here is what I'm seeing:

```
open("/usr/lib/libdns_sd.so", O_RDONLY) = 3
read(3,
"\177ELF\1\1\1\0\0\0\0\0\0\0\0\0\3\0(\0\1\0\0\0\354\17\0\0004\0\0\0"...,
512) = 512
lseek(3, 22628, SEEK_SET) = 22628
read(3,
"\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0\0"...,
1000) = 1000
lseek(3, 22332, SEEK_SET) = 22332
read(3, "A2\0\0\0aeabi\0\1(\0\0\0\0057-A\0\6\n\7A\10\1\t\2\n\3\f"...,
51) = 51
close(3) = 0
stat64("/usr/lib", {st_mode=S_IFDIR|0755, st_size=12288, ...}) = 0
writev(2, [{"dvservice", 9}, {": ", 2}, {"error while loading shared
libra"..., 36}, {": ", 2}, {"libdns_sd.so", 12}, {": ", 2}, {"cannot
open shared object file", 30}, {": ", 2}, {"No such file or directory",
25}, {"\n", 1}], 10dvservice: error while loading shared libraries:
libdns_sd.so: cannot open shared object file: No such file or directory
) = 121
```

This is with dvservice-angstrom. I'm downloading archlinux now.

You could block DVDongle users from connecting to your gateway if you need to due to bandwidth considerations. But they still need to register somewhere.

In such a case, I would think you could still work with them by letting them register on your site, but educate them on why they should connect to a reflector instead of your gateway.

There have been a lot of responses to your question about access to the D-Star network via a DVAP. I think "permission" is not the correct word to use. The registration process is meant to verify the requester is a licensed ham. Registering on a local gateway is hoping the local admin (or admins) would have a better chance of knowing who you are and that you are a supporter of that gateway/repeater just like any other repeater in your area. The latter is difficult to apply to users that really are not considered local to the nearest gateway and can get access through any of the Dplus supported devices via the Internet. As you can see from the over whelming response to your thread, if you are a ham, you will have no problem getting registered (which you have already done). If your call is removed from that gateway (death, theft, no local interest in supporting the gateway, etc) you can get registered elsewhere. Have you ever tried to register on Echolink? D-Star registration is not a big deal. From an Admin's perspective, I think it is just harder to manage.

Thanks for the advice everyone. I use to use dstar locally but have been away for about 5 years out of the country. Good to know I'm still registered. And good to know the dongle is independent of others. I intend to use locally while I am back in country, then use in the mission field when I return.

Thanks everyone.

Are you running any type of "Port checker" or anti-intrusion software "firewall" that might be causing issues?

Thanks Brain. I can confirm I am using version 1.04. And it's not a timing issue as the times that it drops varies.

Kind Regards Daniel Erickson ZL4DE

Subject: [DVAPDongle] DVAP 70CM

Merry Christmas all

I am new to Dstar and am trying to use the 70CM DVAP with the ID-31.

The problem I am having is after I connect to a Reflector or Gateway, once I transmit, after a short while the DVAP stops transmitting even tho I am still transmitting on Handheld.

My Internet connection speed is, 8Mbps Download, 2Mbps Upload

Anyone got any ideas what is going on?

If your using a laptop with the DVAP check you screen saver settings and
your hard drive and general systems settings. They are typically set to
have screen saver go on in 5 min. And hard drive shut down up to 30 min.
I had to disable all of these setting in order to get reasonable talk time.

1968. 70CM dvap

Yahoo group: DVAPDongle
Date: 2012-12-28 03:15:21 UTC
From: kc2idb
Topic: 1968 Message: 1968

Hello all, New to the group here, im having a problem only when I connect to REF001C it reports dup packets from the same call no matter how many times i Connect or disconnect from it, all the id-31a does is make random r2d2 until I force disconnect. It only happened when I connect to that reflector. Any other reflector it works just fine.

Thanks
Ken

1971. No DV AP Dongle Found.

Yahoo group: DVAPDongle
Date: 2012-12-30 02:01:32 UTC
From: Doug
Topic: 1971 Message: 1971

I know this sounds old to you guys, but I cannot finD the answer when I searched the forum. I have a 64 bit Vista machine. Versions 1.02 and 1.03 of the DVAPTool works. However, if I try to use 1.04 or 1.05 with my 2 Meter DVAP, I get "no dv ap dongle found". I then manually downloaded the latest driver from www.ftdichip.com/Drivers/VCP.htm for my machine. It tells me after the update, I need to reboot and I do. Even after all of this, the newer software doesn't seem to recognize my dongle. I then said, "it must be my dongle needs a firmware update". I try this and the software that updateds the firmware doesn't work. It doesn't see the DVAP. I try DVUpdater 1.03, 1.04, and 1.05. None of these recognize the dongle. My dvap dongle works just fine with dvaptool 1.02 and 1.03. So, I know my dvap is okay.

Does anyone have any suggestions?

The DVAP software installs and the driver as well. It identifies the dongle and appears to work but it won't communicate with the radio. Works just fine on Windows machine.

Hi (didn't get your name).

First, make sure you have the latest FTDI USB drivers installed from www.ftdichip.com. If you still have issues, try moving the frequency in DVAPTool up/down 5 kHz (away from the radio frequency) and see if that makes a difference. If the frequency change works, the DVAP just needs to be calibrated (which you can do).

I watched the broadcast on W5KUB this past weekend and noticed the tease for Android support. I have a Galaxy S3, Nexus 7, ASUS Transformer Prime, and if they ever release a 64gb Nexus 10 I'll get one of those too. I've been watching the 440 DVAP with serious interest and will probably be purchasing one next time I can find a sale or used unit. The fact that you will be supporting Android at some time in the future is a huge selling point to me. I appreciate all of the time and effort you are putting into this development!

Have a Very Happy New Year!

Robert

1979. Raspberry Pi

Yahoo group: DVAPDongle
Date: 2013-01-01 19:01:49 UTC
From: michael_w6oso
Topic: 1979 Message: 1979

I have a new Raspberry Pi running Linux Wheezy. I want to run the 2 meter DVAP software on the Raspberry PI. I downloaded from the DVAP website the file: DVAPTool - Linux :
http://www.dvapdongle.com/downloads/DVAPTool-1.04-linux.tgz
The Rasberry Pi will not open the the downloaded software.

Does anyone know how to configure the DVAO software for the Raspberry Pi (Wheezy)? Does the Linux version of the DVAP software act like the Windows version? Do I have to load additional software to the Pi to make the DVAP work?

Any help would be very appreciated.
Thanks
Mike - W60SO

Hi mike .tgz is a tarball which is like a zip file so you need to unzip
this first eith xarchive which should be on the pi. Then run the bin file
that is in the unzipped folder. Linux is different to windows.
Let me know how far you get I will see if I can help you.
I have my DVAP running on the rsspberry pi raspbain with Johnathon naylors
software and its so stable.

1986. DVAP Dongle Issues

Yahoo group: DVAPDongle
Date: 2013-01-08 04:29:27 UTC
From: simon.dowson@rocketmail.com
Topic: 1986 Message: 1986

Hi...

Wonder if anyone can help... I have had the DVAP Dongle since Christmas, but so far not been able to get going with it.

First question is - Can the DVAP Dongle be used with DVTool like the DV Dongle as well as being used at other times as an access point? I made that assumption when I bought it but it may not be a valid one.

Second question is registration. I am currently out of the UK and in Canada for another 6 weeks. My local UK repeater would be GB7RW but there is not a registration link for that box as far as I can see. Can anyone suggest a way of getting registered on the D-Star network by other means?

Finally - Using DVTool (Java) I can open the device on its com port and get the Device name and serial number. An audio test using the sound card works fine, but the Audio test using the dongle doesn't. Viewing console output shows numerous lines of :

audio output buffer empty (delta -30)

with each line the delta increases and soon the port closes.

The pulsing green light goes out the moment I press start but don't know is this is to be expected.

Sorry for the long post... I have been fighting this thing since Xmas.

Any suggestions gratefully received!

Thanks - Simon - G4EQS

From: Bert van der Zwaan
Topic: 1982 Message: 1987

Hi Birmham,

Please explain what you mean with "the DVAP shuts down"?
My DVAP does not do that.
I can shut down the software that I am using to control it but the DVAP remains active until I power it off.
What I noticed is that the DVAP "locks up" from time to time.
This is mainly caused when bad signals are received (I call those R2D2 signals, sorry I am a Star Wars fan).

If this is what you mean than it should not be accepted as normal. There is no timer to set or change for this.
It would require a firmware update to solve.

Good luck.

Hi Simon. The DVAP swaps the AMBE in the DV Dongle for a RF modem chip so it does not work with DVTool.

If you get a DV Dongle, make sure to use the latest beta at http://opendstar.org/tools/DVToolInstaller-2.0beta5.exe.

Topic: 1986 Message: 1989

Hi Robin,

Thanks very much for the quick reply. I had a feeling it would be some basic misunderstanding on my part. I know it can be a pain when newbies ask dumb questions! I will concentrate now on getting registered and using my IC-92D with the DVAP.

Thanks
Simon

HamRadioNow: Double Dose of D-STAR at the DCC

HamRadioNow has just uploaded two D-STAR related talks from last September's ARRL/TAPR Digital Communications Conference! Watch them at: www.HamRadioNow.tv.

The first talk is from Moe Wheatley AE4JY, on how he developed the DVAP. You've probably seen Robin Cutshaw AA4RC, either live at a forum or on one of our videos (and an interview in Episode 20). Robin wrote the software for the DVDongle and DVAP, and he's been the public face of the products. But this time, Moe steps out of the shadows (or from the back row of the forums) and makes his own presentation... and he does a great job!

Next, John Davis WB4QDX - a familiar name to just about everyone in D-STAR - digs into the low and high speed data modes, and shows how easy it is to use the D-RATS program with your radio. And in case you missed, it, HamRadioNow has John's three-hour D-STAR training seminar from last year's Dayton Hamvention? (look for Episode 12).

If you're curious about digital voice beyond D-STAR, there's a TAPR talk on the state of HF digital voice just before John's talk.

HamRadioNow is viewer supported. If you get something out of our programs, please help us to keep making them by stopping by our web site - www.HamRadioNow.tv - and "click the pig" (that's Arvin, our piggy-bank mascot).

1995. No rx audio

Yahoo group: DVAPDongle
Date: 2013-01-09 23:32:28 UTC
From: Glenn Dunstan - Dunstan and Associates
Topic: 1995 Message: 1995

Hello all from Tropical Australia

I have a strange problem with my UHF DVAP.

It has been working perfectly for about 2 weeks, until yesterday.

I can not get any receive audio on my radio (880H) from the dongle.

If I key up the radio on the Dongle freq with a simple CQCQCQ call, I can see the dongle transmit a response on the radio S meter, but I do not receive any recovered audio from the radio - there is no 'beep'.

Similarly, I can connect to a reflector, but there is no connection message decoded from the radio - I see the carrier back from the Dongle, but there is no recovered audio.

All the Dongle LEDs are working normally, and I listened to the Dongle in FM mode - there is data modulation on the Dongle signal OK.

The radio is OK - I can key up the local DStar repeater normally.

I swapped the dongle to another PC - same problem.

Ideas?

Hi Glenn. Try changing your radio frequency up/down 5 kHz and see if that makes a difference. If it does, you just need to calibrate your DVAP. Try downloading the DVAP Util from the download page at dvapdongle.com. Run it and center the RF footprint by changing the calibration value in the lower left corner.

We've seen this happen a couple of times lately when programs other than DVAPTool were used with the DVAP (especially on the raspberry pi).

2001. Problem with DVAP

Yahoo group: DVAPDongle
Date: 2013-01-10 23:01:37 UTC
From: Fran Miele
Topic: 1077 Message: 2001

I have experienced several lock ups with my DVAP. What I mean is that both the Blue and RED lights stay on and my handheld displays a constant "FM Detect" message until I unplug the DVAP from the USB. This happens when using the DVAP with both DVAPTOOL on my Windows machine and Johnathan Naylor's software on my Raspberry PI. It usually occurs after the DVAP has been running 24x7 for a couple of weeks, although it happened twice today

Any thoughts as to why this occurs and how to fix it?

Hello Simon

You need to get registered through your local gateway.

Where is your nearest D-star repeater?

Is there a UK d-star info web page?

The registration links are normally on there.

Hope that helps.

Hi Glenn,

Thanks for your message... I have pretty much worn Google out trying to find a registration link or contact for GB7RW. Its not a heavily used repeater, but it is local to where I am when in the UK. I have exhausted the obviously available options... but will keep trying. I am out of the country for another 5 weeks, before I can actually use my handheld on the repeater directly... it would have been nice to use the DVAP here which is why I got it in the first place.

Cheers
Simon

Hi, Vic,

Thanks for asking...

Might be next week, and maybe I'll release them an hour at a time, so at least one or two hours will come next week. I have one other HamRadioNow story I'll be working on next week, and a client project the following week that will use up all my time, so I'll be finishing the DCC (any remaining GNU and the Banquet Keynote from BDale Garbee in early February.

I need to hire an editor! Anyone know how much they charge?

I assume that this is of no help to you:

http://www.dstarusers.org/viewrepeater.php?system=GB7RW

I hope that I understand what you want to do. You want to get registered
so that you can use D-STAR. If that is correct, here is an option:

http://www.bay-net.org/dstarreg.html

If this does not help, please press "delete" and I wish you luck.

Hi Dave,

Thanks for you message. The page for GB7RW has no registration link, so I could not go that route.... I had tried the other link to K6MDD at Christmas and 2 or three times after, but the registration did not get completed..

Thanks to Mark (ZL2UFI) I am now registerd via ZL2VH and up and running until I get back to the UK, when I will be able to pursue GB7RW.

Thanks
Simon

2014. Help with Raspberry Pi and DVAP Dongle

Yahoo group: DVAPDongle
Date: 2013-01-15 04:45:52 UTC
From: Kelvin
Topic: 2014 Message: 2014

Both work independently, but I want to pair up the Pi and the DVAP and need some pointers/tips/help in getting the right package for the Pi.

I've tapped into the openDV software from Jonathan Naylor G4KLX and the instructions contained in Hans-J. Barthen, DL5DI, document and all seems to go well until I get to 'apt-get install repeater' and the result is

E: Unable to locate package repeater

So it appears the package is not available.

I'm wondering how others have managed to get this to locate the correct package.

Help is appreciated.

You need to be running the plain Debian version, not Raspian; there isn't yet a Raspian version of Jonathan's software.

2019. Ordinal 80 could not be found

Yahoo group: DVAPDongle
Date: 2013-01-17 00:06:50 UTC
From: mikeb_onsite
Topic: 2019 Message: 2019

Hi, I just upgraded my DVAP tool to the latest one, and it failed to run, claiming the above ordinal could not be found in the FTD2DX.DLL. OK, I went to the FTDI drivers website and downloaded the latest version, which is 2.824

I tried to uninstall the old version using control panel - it doesn't even appear in there. I then went to hardware manager, and right clicked on the USB COM port. I clicked on uninstall. I then un-plugged the computer from the outside world, and plugged the dongle back in. It found it, and I then pointed at the new drivers, which it seemed to install OK. Re-booted the machine, and ran the dvap tool, and got exactly the same damn message as per the subject header. I then opened hardware manager again, and confirmed I am running version 2.824 of the FTDI driver.

Not sure where to go from here, anyone got any ideas, please?

Thanks,

Mike.

2023. DVAP and Linux

Yahoo group: DVAPDongle
Date: 2013-01-21 08:26:18 UTC
From: John Dawes
Topic: 2023 Message: 2023

Hello Robin and all

I have both a 2m and 70cm DVAP operating with Windows XP and Windows 7. I have great fun with this set up - but Linux is a bit like Mount Everest: it is there and I would like to have a go at it.

I have downloaded the DVAP tool for Linux (1.4) and have tried to get it doing in Linux Mint 13 and 14. I have not had any success, although the interface screen comes up and I have entered my call sign, added a frequency correctly, and clicked open and nothing happens. Robin says that DVAP tool 1.4 Linux works with a variety of 'flavours' of Linux and may be someone out there has succeeded with Linux Mint? The computer noted the connection of the DVAP.

Any suggestions, help will be greatly appreciated.

73 John Dawes
VK5BJE

Perhaps Robin may suggest an appropriate Linux distro for an old guy?

2028. DVAPTool for Raspberry Pi Update?

Yahoo group: DVAPDongle
Date: 2013-01-23 14:30:08 UTC
From: jrkolonay
Topic: 2028 Message: 2028

Hello Robin

Just wondering if you have an update for the Raspberry Pi build of DVAP tool or a command line equivalent. I've had limited success using the Freestar image, and honestly, that's a lot more functionality than I'm looking for.

I literally just want to use an RPi for a Dstar appliance!

Thanks, and 73

Topic: 2023 Message: 2029

Hello Michael,
thanks for the email, I have removed the Modemmanager and I will check again for the britty package. I have made a little more progress and have the software recognise the DVAP, and when I connect it shows the correct indication. However, the running log program is not visible and I suspect one of the files in Robin's software has not opened or executed properly. I did connect once to our local repeater here in Adelaide, VK5RWN C and to Reflector 001C - but not a second time. Other than that I am impressed with Linux Mint. It is good to know someone else has succeeded.
When I have it all sorted out I will report back.

I have DVAPTool running on Linux Mint without any problems. Be sure to remove ModemManager and br1tty packages.

2032. New DVAP Problem

Yahoo group: DVAPDongle
Date: 2013-01-25 18:35:51 UTC
From: kelandis@...
Topic: 2032 Message: 2032

Hello All

Just got the UHF dvap this past wednesday1-23-13 and all was working great. Linked to reflectors,repeaters etc.

So...I decided to change the dvap to my Raspberry pi but didnt have all the info I needed to set it up.

Long story short..I moved it back to my Mac and now it wont work.

Symptoms:

DVAPtool will see the dvap and the blue led flashes. However..when I transmit to it nothing happens...no green receive led but the signal strength shows up on DVAPtool software. It also shows the serial number and DVAp Dongle in software but nothing in any of the other fields as before.

Any help will be much appreciated!!

PS...have tried to install and get working on 2 other computers with same results.

Tnx es 73

Hi Kent. We've had a handfull of folks that used third party software on the PI that had the same problem. It seems to be corrupting the calibration data in the device. You can download DVAPUtility from the downloads page and try to recalibrate it yourself or send it in for calibration.

2036. DVAP (70CM) and IC-92AD Problem

Yahoo group: DVAPDongle
Date: 2013-01-26 01:48:39 UTC
From: butch weber
Topic: 2036 Message: 2036

Hello, I hope you can help me. Its been a hair puller for sure.

Problem: DVAP works fine with IC-880h. On the IC-92AD HT it only will transmit to the DVAP, no receive.

I have the 70CM DVAP and it did work at one time with the HT.

What actually happens is I see the DV signal being received from the DVAP and while the 880 will decode it the HT won't. Right at the end of the transmission it changes to the FM DET icon. If I press the squelch to hear what is going on I at first hear the Digital signal on FM and than get what sounds like R2D2 signals.

The HT will work fine with a DStar Repeater both transmit and receive.

Has anyone come up with this problem?

I can't say the HT is bad because it works with both analog and DStar repeaters.

I can't say the DVAP is bad because it works fine with the IC-880h.

It actually works well with the IC-880h and having the DVAP on an external antenna I can drive about a mile around the neighborhood and it works great.

I am perplexed and don't know how to fix this problem. Please help if you can.

Thanks,

Butch - WA4GIF

2037. DVAPtool question.

Hey all, was just looking at some stuff on the DVAP/dongle website regarding changing the "stock" voice announcements heard whan linking/unlinking, etc, and got to wondering, i know one can replace these via recording your own voice announcements, which i kinda like, but i was wondering, is there a way for me to bring in (import) something like a Windows sound file or a .wav file on my machine and use that instead? if not then i`d like to suggest this as a update idea. Also on the same line, what about having a option to completely disable the voice announcements altogether? Another suggestion for a feuture feature. Thanx! 73 DE N9NRA

Hi Butch. Download the DVAPUtility from the downloads page at www.dvapdongle.com and install it. Then run it and take a look at the spectrum from keying up the 880 as compared to the 92. You may need to tweek the DVAP frequency calibration so that both are centered.

Hi Kent. As long as the full bandwidth of the radio shows up in the display, that should be ok. Placing the radio at 146.000 (in the US) before calibration is best practice but not absolutely required. For folks in IARU regions 1/3, use 145.000.

Hello Robin

I replied directly to you with a screenshot of the readout I get when trying to use the DVAP….I tried to use the DVapUtil and it will connect to the Com port and say its Running but nothing else. '

The screenshot I sent was in a .pdf file. Did you receive it?

Thanks!

2045. Re: [DVAPDongle] Re: DVAP (70CM) and IC-92AD Problem

Yahoo group: DVAPDongle
Date: 2013-01-27 00:41:40 UTC
From: Butch Weber
Topic: 2036 Message: 2045

Hello Robin, Thanks for the help. That fixed it but I also found out that the Raspberry Pi is corrupting the calibration data. I assume they are resetting the calibration to a set point in the software because every time I hook it up to the Pi it reverts back to the same problem. I can't get the DVAPUtility program to run right either. It connects but don't show any information about the DVAP or provide any signals on the grid. I know it is connected because it will transmit when I click the Transmit box. I have the DVAP set for the middle of the 70cm band 435500 Mhz, but when I take it off the Pi it always reads 435494 Mhz and never works with the 92AD. I can't look at the receive signal from the 880 or the 92AD because I don't get the signal on the grid. So what I have done is use a frequency counter to bring it back to 435500 Mhz by inputting a -250 in the calibration box. After that I get out of the DVAPUtility and run DVAPTools and both rigs work with the DVAP. If I hook it up to the Raspberry Pi, the 880 works fine but the 92AD don't because it reverts back to 435494 Mhz. Did you write the software for the DVAPNode and if so do you know if it defaults the calibration? I have even tried to get the calibration as high as 435506 Mhz on Windows 7-64 Bit but it continues to revert back to 435494 Mhz. If there were a calibration program for the Pi I think I could get it to work there. As it is, I can't use the Pi-DVAP combination around the house because it don't work with the HT. I wanted to use the Pi due to the low power consumption and would be able to leave it hooked up all the time and possibly use it as a Hotspot later on being able to make it portable. So that is what I found out and I can get it back to working properly as long as I don't hook it up to the Raspberry Pi. :-(

Thanks again,

Butch - WA4GIF

Hi Tom. Make sure you are using commands that are documented on the "Using the DVAP" page at http://www.dvapdongle.com.

Remember that "CQCQCQ " only works when you are linked somewhere, otherwise it is an unknown command.

Hi Bill. We've noticed that the FTDI drivers sometimes fail to register the device if you boot with it plugged in. Your fix of unplugging/plugging fixes it. Hopefully, they will fix this problem.

It works great with both the 440 and 2M DVAPs.

As to its use with some of the other hotspot boards, that's probably the same situation as happened with the ID-31. The tolerance of protocol were tightened up to increase the performance of the radio. Any hotspots that aren't tuned to give a clean signal may have problems.

Tuning a hotspot correctly requires the use of spectrum monitors and relatively sophisticated test equipment. Tuning the volume knob on a hotspot board until a radio works does not quite fit the requirements.

2056. Schemes while swapping between DVAP commands and memories

Yahoo group: DVAPDongle
Date: 2013-01-31 21:29:45 UTC
From: John Breland
Topic: 2056 Message: 2056

What "scheme" do you guys use with your handhelds to toggle between connecting to a repeater (or reflector), the CQ comand, and the unlink command?

Currently I have unlink and CQ in memory locations 1 and 2. Reflectors are in the next several memory banks. This wasn't a problem intil I entered several dozen repeaters and reflectors. I feel that there has to be a better scheme than what I am doing to switch between these commands while using the DVAP.

Any suggestions?

2057. 70cm DVAP & IC-91AD -- poor receive!

Yahoo group: DVAPDongle
Date: 2013-01-31 21:53:33 UTC
From: kk7pw
Topic: 2057 Message: 2057

Hi folks,

I am new to the list. I am using a 70cm DVAP with a Comet SMA-24 antenna and RazPi, and use both ID-880H and IC-91AD. I get excellent (anticipated) performance with my 880H (via my outside Comet GP-15 at 25ft -- the 70cm signal seems to easily find its way in and out of the house), though my 91AD is rife with R2D2 in close range and around the house. Anyone else have this experience with 91AD? I have tried replacing the stock antenna on the 91 with the SMA-24 and no improvement. Also went back to stock DVAP antenna just to see if any benefit -- no change. Low or high power -- no difference.

BTW, when I was previously using the 2m DVAP, I had no such issue, so I am guessing the UHF is more challenging to receive / decode than the VHF. Not sure. Any 91 tweaks come to mind?

Thanks for any advice.

2061. Raspberry Pi Re: DVAP and Linux

Yahoo group: DVAPDongle
Date: 2013-02-01 07:14:08 UTC
From: kk7pw
Topic: 2030 Message: 2061

Hi. I've been running my RazPi with (initially) a 2m DVAP and now a 70cm DVAP (heard from others there were receiver tweaks made for 70cm). My system has been running great. IRCDDBGW works and updates fine. My second RazPi is currently deployed as a media center running Rasbmc. :)

I run both an ID-880H and an IC-91AD. The 880H plays very well, and my outdoor Comet GP-15 tribander (at 25') listens and speaks well to the DVAP indoors (which I now have sporting a dual-band Comet SMA-24 whip). Trouble is my IC-91AD is now suffering from constant R2D2, even in proximity to the DVAP, while the 880H (using the same DVAP) works fine.

It has been suggested that the DVAP is somehow off frequency and needs to be calibrated using DVAPtool. I'm unsure about this, since if so, the 880H would / should also be R2D2'ing.

Anyone have thoughts on this? Anyone else have DVAP issues using the 91AD, or any tweaks to settings I should consider? BTW, I have also tried using the SMA-24 antenna in place of the stock 91 antenna, with no improvement.

All for now. 73.

2063. BEWARE of 3rd party DVAP software for the Raspberry Pi

Yahoo group: DVAPDongle
Date: 2013-02-01 14:27:50 UTC
From: aa4rc
Topic: 2063 Message: 2063

As several people have experienced, there is a flaw in the 3rd party software for the Raspberry Pi. The software wipes out the calibration data that is programmed into the DVAP at the factory.

If you use the software, you will have to recalibrate using the DVAP Utility software. It probably won't get you as close as factory settings but can bring it back to usable.

2066. Re: [DVAPDongle] Schemes while swapping between DVAP commands and memories

Yahoo group: DVAPDongle
Date: 2013-02-01 15:28:11 UTC
From: Tim Hardy AF1G
Topic: 2056 Message: 2066

John,

My setup is similar to what you described. In my IC80AD and ID880H, I have an entire bank of channels dedicated to the DVAP.

Chan 00 is my CQ channel. Chan 01 is the unlink command. Chans 2 and 3 are the ID and echotest channels. Then I have all the reflectors in numerical order followed by repeaters I might link to.

Rather than dial to a reflector to link it, I just enter the channel number on the IC80AD keypad and quick-key to link. Once linked, I punch 00 on the keypad and I'm back on my CQ channel. Dialing up one channel lets me unlink. It's about the simplest way I could think of to organize it.

Robin,

Wiping out important device settings is definitely NOT a good thing.

Which software are we talking about? There are several, it would be good to know which one(s) - to avoid them, and/or to have them "fix" it..

I do not believe it is my WinDV you are talking about, because that is not available for the RPi's. Still, as my second DVAP *is* connected to a Hackberry (not RPi, but similar), it would be good to know!

Thanks,

Fred

2072. Re: [DVAPDongle] 70cm DVAP & IC-91AD -- poor receive!

Yahoo group: DVAPDongle
Date: 2013-02-02 04:00:33 UTC
From: Butch Weber
Topic: 2057 Message: 2072

I had that problem as well with my IC-92AD. What I found out is that the Raspberry Pi version of the DVAPNode software corrupts the calibration data that the factory sets the DVAP to before shipping. I reset it using the Windows DVAPUtil program to bring it back right on frequency and the HT started working again. By the way the ID-880H worked in all cases. I plug the DVAP into the Pi and reboot and it reverts back to the same frequency that don't work with the HT. What I found is that in the Pi DVAPNode software is an Offset. I set this offset the same as what it took me to get back to the correct frequency using the DVAPUtil software in Windows. In my case it was -250 to get it back on frequency. Now that the offset has the -250 in it, the HT and the 880 work in both the Pi and the Windows DVAPNode software.

Hope this helps.

I use the UR callsign memory locations to add the different link commands. This gives you 60 different possibilities for them. I set the first one to CQCQCQ (to set after linking), 2nd to U for unlink, DCAP I and E in the next two, after that any reflectors I want and/or repeaters. I just have to change the UR Callsign by going to Menu, Callsign, Edit, then turn to the one I want and hit Enter. Then I can use PTT to get the right link. It sounds harder than it really is. By the way, I'm using the IC-92AD.

Per a user it is the DVAPnode or DStarNode software. Can someone confirm?

Hi Brian. You can use DVAP Utility to see the current calibration setting (and reset it).

It is either DVAPnode or DstarNode, not sure which. It has an "offset" field that wipes out the calibration. I think it is just a bug. It should have used a different API call.

Hi Butch. Thanks for pointing that out. You can check the calibration value with DVAP Utility before playing with the other software. You can then restore it afterwards when the DVAP quits working. :)

I can confirm what Butch posted. It is G4KLX's DVAP node software.
I recalibrated my DVAP using Moe's DVAP Utility. Confirmed that the setting persisted by disconnecting/reconnecting it to my PC. Then plugged it into the Pi. Rechecked it with DVAP Utility and it was reset to zero.

I can confirm that it is DVAPnode. That is the only Pi software I have used and it wiped out the calibration. Happens on both 2M and 70cm DVAPs.

2085. RE: [DVAPDongle] Schemes while swapping between DVAP commands and memories

Yahoo group: DVAPDongle
Date: 2013-02-03 18:49:11 UTC
From: Woodrick, Ed
Topic: 2056 Message: 2085
Attachments: 2 described; binary payloads are missing from this source WARC

John,

Many people often put each "home" repeater in it' own "bank" then you can quickly switch between memory banks, or quickly switch between functions within a bank. The DVAP is generally setup as another bank.

For those repeaters that you may want to have programmed in, but not necessarily consider a home repeater, these are often grouped into one or more banks, for example, one bank for each surrounding state.

You didn't mention which radio that you were using, that can make a big difference, and the capabilities of the radios can vary greatly. The ID-31 and ID-51 completely change the way that memories are organized.

For many of the radios, there's the ability to download the information for importing into the radio's software. http://www.dstarinfo.com/icom-import-files.aspx allows you to download in a variety of fashions to support the programming method that you desire.

Sent: Friday, February 1, 2013 8:48 AM
To: DVAPDongle@yahoogroups.com
Subject: [DVAPDongle] Schemes while swapping between DVAP commands and memories

What "scheme" do you guys use with your handhelds to toggle between connecting to a repeater (or reflector), the CQ command, and the unlink command?

Currently I have unlink and CQ in memory locations 1 and 2. Reflectors are in the next several memory banks. This wasn't a problem until I entered several dozen repeaters and reflectors. I feel that there has to be a better scheme than what I am doing to switch between these commands while using the DVAP.

Any suggestions?

Topic: 2056 Message: 2086

Thanks for the replies everyone. I use a IC-92A, which is not easy to hop between banks with. Maybe I am overlooking a memory management feature? I don't really have "home repeaters" because the HT is the only D-Star radio I have and the closest D-Star repeaters are over a mountain from me. I would be "dead in the water" without my DVAP. I sure do turn that memory knob a lot though

Has anyone come up with a simple package for the Raspberry Pi and DVAP combo? I don't want to run a repeater or gateway, just something like DVAPtools only ported over to the R-Pi. The R-Pi/DVAP are made for each other. If we only had a program that didn't need to mess with port forwarding or setting up as a gateway it would be nice.

From: la2qaa
Topic: 2089 Message: 2089

Hello Robin,
Like (I suspect) many otheres, I'm eagerly awaiting the Android mobile phone DVAP application.

You previously mentioned Christmas but I maybe the Raspberry Tart software took priority ... however, I *DO* realise you're a busy chap.

Any news on a possible release date ??.

Being 500km from a D-Star repeater I'm totally dependant on the DVAP and it would certainly ne nice not to have to lug a laptop round on the (mechanical) wheelchair.

The DVAP + Galaxy SII + O.T.G.USB would be the bee's knee's.

Take a look on Page 76 of the manual. Changing memory banks is as easy as rotating the top button.

You're missing the point. It's over kill to set up as gateway or get a club call to register as a repeater just to connect with the DSTAR network. All I want to do is use my DVAP as it was intended with the R-pi as the computer.

> Has anyone come up with a simple package for the Raspberry Pi and DVAP combo? I don't want to run a repeater or gateway, just something like DVAPtools only ported over to the R-Pi. The R-Pi/DVAP are made for each other. If we only had a program that didn't need to mess with port forwarding or setting up as a gateway it would be nice.

The ICOM DR mode, I think, takes care of all that without programming. 99% is already in DR enabled rigs (ID-31, ID-32, etc.). It incorporates into 2 fields (T0, FROM) all you need for all DVAP commands, including talk, link, unlink, echo, status, and connecting with all reflectors worldwide...all without programming. Linking to a specific repeater, or call sign routing to a specific ham can easily be done. Just spin the control knob, and perhaps tap the enter button a few times as needed. DR also gives you access to nifty features like listing nearby DSTAR repeaters. DR mode plus a DVAP lets you easily and quickly zoom around the DSTAR world.

I'm really stuck getting the dvap working. Keep getting "gateway unknown" message when trying to connect. The "I" and "E" work fine. I turned off the firewall on windows and anti-virus program. Blue light flashes on the dvap, pulsing green light before software is opened. Internet connection is strong. I put the module in the 7th space and the L in the 8th space. Not sure whatelse I could be missing. I do see the following message on the dos screen when loading the software. "It looks like you are connected to a USB serial device other than the DV dongle, please check your device com port." Not sure if that has any value or not. Any thoughts would certainly help.

Tnx

Albert,

The DR mode does indeed give those capabilities, but, it does so for repeaters. Since the DVAP is simplex, the radio doesn't turn on the features in the same way. Bummer.

I use DR mode with the DVAP by setting up a "repeater" for the DVAP frequency that has an offset of 0.00. That way the radio thinks it's a repeater and will do the DR stuff appropriately.

Steve can you give me a screen shot of your repeater page. I got the offset of 0.00 and all but what goes in the remaining fields. I tried it but must be missing something some where. It will be a while before I can test it again since I did a dump thing and rendered my dvap inoperable. Hoping to get it back up and going soon

2106. DVAPTool version 1.04 for Raspberry Pi released

Yahoo group: DVAPDongle
Date: 2013-02-18 19:45:11 UTC
From: aa4rc
Topic: 2106 Message: 2106

DVAPTool for the Raspberry Pi is now available for the Raspian Wheezy distribution 2013-02-09-wheezy-raspian.img.

Follow the steps below to install/run:

1) make sure you are running Raspian Wheezy 2013-02-09 and are connected to the internet with your Pi.

2) open an LXTerminal window and run: "sudo apt-get install qt4-dev-tools". Answer "Y" when prompted.

3) in terminal window run: "curl -O http://opendstar.org/tools/DVAPTool-1.04-rpi.tgz"

4) in terminal window run "sudo tar xzPf DVAPTool-1.04-rpi.tgz"

5) in terminal window run DVAPTool with "./DVAPTool" from your home directory.

Note that this is a full GUI version. I'm working on a text only daemon.

There are no current plans to compile DVAPTool for any distribution other than Raspian. It may or may not work on others.

From: W.
Topic: 1901 Message: 2107

Robin,

I just attempted installation of my DVAP on a Windows 8 machine with Bonjour installed (during installation of iTunes and listed in the programs listing). The drivers loaded and I have the DVAP showing in the device listing as Com 3, however when I start DVAPTool 1.04 it is not recognizing the DVAP and listing Com 3. I have verified the latest firmware in the DVAP.

Any further thoughts? Should I de-install Bonjour and reinstall it as stand-alone?

Thanks,
Stan, WA4DYD

When setting up a repeater for the FROM field with a zero offset (so that the Gateway CQ function works with a DVAP)...the ADD function requires a CALLSIGN before it will allow you to save the new "repeater". How do you handle that? What CALLSIGN would be added, or is there a workaround? THANKS

Topic: 1901 Message: 2113

Hi Stan. Try version 1.03 of DVAPTool and see if that makes a difference. A few folks have reported the same issue that you currently see. I'm working on some debug/test code to try to figure out why 1.04 doesn't show the device.

The change in 1.04 was to use the FTDI API to ask for devices. You'd think that their API would work better than scanning the registry (which is done in 1.03).

Robin,

Thank you so much for making this program. I have been using it on my Pi for a while now, and it is perfect. I'm very spoiled at being able to bring my own D-star repeater with me without having to open my laptop. I am looking forward to a text only version. Is ircDDBgateway available in a text only version too? I'd love to not have to run X on my pi.

Did you make sure you are running the latest or a standalone copy of Bonjour? I ran into this and that is how I solved it.

2119. DVAP question

Yahoo group: DVAPDongle
Date: 2013-02-19 17:57:53 UTC
From: Rusty Bryant
Topic: 2106 Message: 2119

I'm about to purchase an ID-51 and a UHF dvap.

I've heard that a dvdongle will not callsign route to another dvdongle, so my question is, will a dstar radio callsign route through a dvap to another dvap on the other end?

It's an elementary question I'm sure but unlike IRLP which has pretty much a single source for information, dstar has about a million sources. Of course, that's not a bad thing but its sometimes hard to find an answer.

Thanks!

Subject: [DVAPDongle] DVAPTool version 1.04 for Raspberry Pi released

DVAPTool for the Raspberry Pi is now available for the Raspian Wheezy distribution 2013-02-09-wheezy-raspian.img.

Follow the steps below to install/run:

1) make sure you are running Raspian Wheezy 2013-02-09 and are connected to the internet with your Pi.

2) open an LXTerminal window and run: "sudo apt-get install qt4-dev-tools". Answer "Y" when prompted.

3) in terminal window run: "curl -O http://opendstar.org/tools/DVAPTool-1.04-rpi.tgz "

4) in terminal window run "sudo tar xzPf DVAPTool-1.04-rpi.tgz"

5) in terminal window run DVAPTool with "./DVAPTool" from your home directory.

Note that this is a full GUI version. I'm working on a text only daemon.

There are no current plans to compile DVAPTool for any distribution other than Raspian. It may or may not work on others.

2121. QUESTION: MAKING DVAP and "GATEWAY CQ" WORK TOGETHER

Yahoo group: DVAPDongle
Date: 2013-02-19 18:56:48 UTC
From: albertkarel
Topic: 2121 Message: 2121

Thanks to Robin for all his good work here. I hooe he might help on this one.

On the ID-31 and 51, DR mode is very useful.

One valuable feature is the GATEWAY CQ list. It gives you quick access to all of the repeaters on the world-wide ICOM repeater list.

While you are in the TO field in DR mode, you just hit the center button and you see Local CQ, Gateway CQ, Your Call Sign, etc. Clicking on Gateway CQ brings up a list of all the repeaters, sorted into areas of the world. WOW...what a feature.

BUT IT DOES NOT WORK WHILE USING THE DVAP. That is a significant loss...not being able to easily link with worldwide repeaters because we are using a DVAP.

Because you must use a simplex frequency to contact the DVAP, the internal ID31 and 51 firmware apparently concludes that if you are on a simplex frequency, you are NOT going to be linking, so it DISABLES THE GATEWAY CQ MENU!

I would much appreciate it if Robin could advise how we can have our cake (tasty DVAP) and eat it too (have full GATEWAY CQ functionality).

I tried setting up a repeater link with zero offset, but couldn't make it work...perhaps I did it wrong.

THANKS in advance for help with this problem.

Hi Don. Unfortunately, Apple wants their pound of flesh to connect with their devices. First, you have to have your lawyers get with their lawyers to hammer out a contract in the MFI (made for iPod) program. :)

Using a Raspberry Pi, it would be possible to extend the device via wifi so you could still use it with a custom app.

2134. Re: Installing on Windows 8

Yahoo group: DVAPDongle
Date: 2013-02-20 16:33:30 UTC
From: W.
Topic: 1901 Message: 2134

Robin,

I found I had 1.03 in my download library and loaded it. While it displays COM3 as a com port, it will not open the port. I get the error messages "Cannot open com port COM3" and Cannot open DVTool device COM3". Not sure how to proceed at this point. Every indication is that the "device" is working properly. Any thing you would like me to test for you, let me know.

I have run into a few issues with two other USB devices, one a USB connected GPS that had a Prolific chipset no longer supported under Windows 8 and another that was an RS-232 to USB adapter that has worked under every other OS I have used it with from 98 up through Windows 7 (could be the same chipset issue, but I'm unable to determine if that is the case).

Thanks,
Stan

I think he was asking how to run the software from a cold boot to create a headless system. I had the very same question. In fact, I will be adding the wifi dongle to use with my iPhone. That will bring up a whole new series of questions. I am not a Linux guy (can you tell?).

Thanks,
Dave

Thanks, Roy. I would think that since I just downloaded iTunes from Apple and it is included that it would be the latest version. I've had issues with two USB devices not working with Windows 8 that did work with Windows 7 due to USB chipset compatibility problems. It does get a little frustrating upgrading OS's at times.

I noticed an autostart folder in /homr/pi/.config/autostart for the DVAPnode image to autostart the two programs. That's probably what he is referring to.

2138. Re: [DVAPDongle] QUESTION: MAKING DVAP and "GATEWAY CQ" WORK TOGETHER

Yahoo group: DVAPDongle
Date: 2013-02-21 01:24:56 UTC
From: Michael Kaufman
Topic: 2121 Message: 2138

Hi Al:

I have been using my ID51 with my vhf davap with no problems. In the from field in DR mode select the CS button followed by selecting repeater list scrolling down to # 20 followed by the blue button will get you simplex frequencies list. I use 145.67 for my dvap, the blue button will select it. The RX-CS will select the To field. The CS button will get you another menu, the third field down "your call sign" will get you an entire menu of commands to be used on the dvap, all of the reflectors are listed as well as un link and CQ and I added repeaters that I frequent to the list.

Have fun with the radio I love mine

Mike

Thanks Robin,
I went back and re-did step 4 to make sure that I did it correctly and then everything else worked as it should. The DVAPTool software is working GREAT on the PI!!! Thanks for all of your hard work.

Are there any plans to adapt the software so that it will automatically start and connect to the DVAP-DONGLE so that no user interaction will be necessary?

Thanks again and 73

Hi Robin,

I performed these steps. When I try to execute the DVAPTool I get an "unable to connect to X server" message.

There were no errors reported by the previous steps.

Any ideas?

Hi Robin,
I flashed my SD card as per your instructions. All of your instructions are fine until Line 4, where you call for "sudo tar xzPfDVAPTool-1.04-rpi.tgz". The reply from the PI is "xtar: old option 'f' requires an argument. try 'tar -- help or 'tar--useage' for more information.

Is there a mistake in the line 4 instructions? I am condifent that I downloaded a good software as I used the SHA-1 Checksum software to varify the complete 2013-02-09-wheezy-raspbian.zip software.

Do you have any ideas or suggestions?

Thanks
Mike - W6OSO

Mike,
There is a space between the xzPf and DVAPTool in the command line. It is hard to see on the instructions but if you look close you will see it.

Give that a try!

From: jsfcalif
Topic: 2121 Message: 2144

Mike,

I think Al wanted to use Gateway CQ rather than Your Call Sign so he would have access to all the repeaters in the database and not have to add each repeater to the list as you did.

In the from field in DR mode select the CS button followed by selecting repeater list scrolling down to # 20 followed by the blue button will get you simplex frequencies list. I use 145.67 for my dvap, the blue button will select it. The RX-CS will select the To field. The CS button will get you another menu, the third field down "your call sign" will get you an entire menu of commands to be used on the dvap, all of the reflectors are listed as well as un link and CQ and I added repeaters that I frequent to the list.

I've been having a lot of fun setting up the little Raspberry Pi computers to work with the DVAP. Although there is a lot on the Internet about this, I thought I would share my experiences in a blog post in case it might answer some questions that anyone might have about setting up this system. The blog post is here:

HI MIKE-

That's just how I did mine too....BUT...it does not give you
access to all the repeaters listed under GATEWAY CQ. To get to repeaters while on a DVAP, you must program them in by hand! If you are on a repeater, you have an amazing pre-loaded, world-wide list. That's
a significant loss.

THAT'S WHY I HOPED ROBIN WOULD CHIME IN WITH A FIX.

We LOVE our DVAP's and we LOVE our ID-31's and 51's, but the without some help here...we're going to miss out on an important feature of those radios...ALL THE PRE-PROGRAMMED REPEATERS listed under Gateway CQ.

AL

It may not be the most artful, but this works here...
Add the following to the "rc.local" file (in /etc)

```
# Start X Server so DVAPToo can start...
su pi -c startx
```

Create the following ".xinitrc" file in /home/pi and make it executable (chmod 755 .xinitrc)

```
#!/bin/sh
#.xinitrc
# Start DVAPTool
exec /home/pi/Desktop/DVAPTool -open
```

This starts an xserver session at boot and then runs DVAPTool and "opens" it so you are ready to connect via RF. As soon as you see the blue LED light up, you can key up to connect...

Mike,
There is a space between the xzPf and DVAPTool in the command line. It is hard to see on the instructions but if you look close you will see it.

Give that a try!

Thanks Ed that was very helpful, I had to make one minor adjustment because of where DVAPTool was installed, based on Robins' install instructions, on my SD Card, so I have "exec /home/pi/DVAPTool -open" in .xinitrc and it fired right up.

2158. DVAP Commands on 2m DVAP

Yahoo group: DVAPDongle
Date: 2013-02-23 14:33:47 UTC
From: Mark
Topic: 2158 Message: 2158

I got a new ID-51 recently and was getting it all setup for use with my 2m & 70cm DVAPs. While checking out the DVAP commands, talk, link, unlink, echo, status, etc. I noticed that echo and status don't work on the 2m DVAP and work as expected on the 70cm DVAP. Initially, I thought it was the ID-51 programming or something. However, I grabbed my IC-91AD and got the same results.

I got on the air and worked with a friend and coordinated a test and of course his DVAP operated as expected with all the commands. Interestingly, if I setup for echo test on mine, connected to a repeater, when I transmitted the DVAPTool would show UR: E but he would show that I was sending CQCQCQ in the UR: field. When he made the same test, his DVAP should show UR: E as expected and I would see UR: E and he would get his echo test as expected.

This is all very perplexing because I think all the commands use to work on my 2m DVAP. The only thing I can think of is that my 2m DVAP was purchased the first day they were available at HRO and I am sure the other one is likely somewhat newer.

As I was writing this, I am wondering if there has every been a firmware update for the 2m DVAP and I just need to update or something.

Mark,
WB5SLA

Hmmm. Did you notice that DVAP echo and status UR are different from DSTAR repeaters?Echo and status test for DVAP is:UR: DVAP<sp><sp><sp>EUR: DVAP<sp><sp><sp>I Look about 1/2 of the way down: http://www.dvapdongle.com/DV_Access_Point_Dongle/Using_the_DVAP.htmlThat works like a champ for me. The DVAP plays around with the various UR fields as it knows that you are calling simplex. What you see out on the various repeaters and gateways is not exactly what you have in your radio. Just my 2 cents. Others could tell you the more technical side. 73. _-_-_ Dave, AE7TD

This all works just fine on my Pi. My question is there a way to eliminate the pop up that says your running the current version so I can see the small monitor attached showing the DVAP window without having a mouse to click the OK button. This is not a big deal was really curious for convenience with the least hardware.

2177. Can't open DVAP on RPI

Yahoo group: DVAPDongle
Date: 2013-02-28 19:55:01 UTC
From: Fran Miele
Topic: 2177 Message: 2177

I installed the DVAPTool on my Pi today. When I try to open the device I get an error: Here is what I see in the terminal window:

```
pi@raspberrypi ~ $ ./DVAPTool
DVAPTool version 1.04
Restored parameters:
UserCallsign=W1FJM
DVDevice=/dev/ttyUSB0
Frequency=145685000
SquelchLevel=-80
TxPowerLevel=10
O/S: Linux
DNSServiceBrowse error=-65563
new frequency (145685000)
Callsign set to W1FJM
Frequency set to 145685000
FTDI serial device ttyUSB0 found (A6007EW0)
Serial device (/dev/ttyUSB0) added
Found 1 FTDI device(s)
Callsign set to (W1FJM)
Callsign set to (W1FJM)
Opening DVAP device /dev/ttyUSB0
Cannot open com port /dev/ttyUSB0
Cannot open DVTool device /dev/ttyUSB0
```

How do I resolve this ?

Fran, W1FJM

Since it appears to be a com port issue have you tried changing your com port?

Also are you running Wheezy and which version?

This might be a stab in the dark but ha be you tried to browse the Internet with your Pi? Looking the line that reads "DNSServiceBrowse error=-65563" you might not be connected to the Internet properly. Just a guess though.

From: Fran Miele
Topic: 2177 Message: 2180

I just looked at the /dev/ttyUSB0 file and it says the owner id OPENDV.
Could this be the reason DVAPTool can't open it?

DVAPTool is installed on a PI that also has Ircddbgateway and Repeater
installed that would use the DVAP. However they are not running.

Any useful info will be appreciated. I don't know enough about Linux to
figure this stuff out.

Thanks

Adrian,

I have your emails, but didn't see anything with this issue.

I know the command you just sent will append to a user account, but what is it actually going to do? What is "dialup"? I like to understand what I? am doing so I learn.

Thanks

2186. Read Only Reflectors?

Yahoo group: DVAPDongle
Date: 2013-03-01 04:26:42 UTC
From: Jeff
Topic: 2186 Message: 2186

I just setup my new 70cm DVAP for use with my ID-31A and it seems good so far but one reflector REF012C being used for the PAPA D-Star round table net and my DVAP will only connect read only. Are they locking out DVAP's or is it people need to pay to use the PAPA reflectors/repeaters? Some of the people on the round table were not in the local area to the repeater so its not rejecting all people.

I have no problem connecting to REF014C and being seen there, so I have least some things right in my DVAP setup...

Thanks!

Jeff Ellis

Hi Jeff. It looks like your registration of the "A" terminal made it through to REF012. Try it again. Also, try connecting with a space in the 8th character of the callsign in DVAPTool.

Adrian,

The usermod did not fix it.

The only way I can get DVAPTool to run and let me open the DVAP is if I log in as "root" and run "/home/pi/DVAPTool".

2189. Echo and Info commands in DVAP on ID-31A

Yahoo group: DVAPDongle
Date: 2013-03-01 15:48:37 UTC
From: ar11964
Topic: 2189 Message: 2189

Can someone please give me a hint how to enter DVAP E and DVAP I commands into my ID-31A? The programming software rejects the final character. On the HT itself the Simplex command seems to have disappeared after loading the dstar info repeater lists. Everything else, reflector linking, Unlink, etc. was programmed in using the software and micro SD card and works as expected. Thanks, Alan, K2RHK

2190. Overloading on the DVAP with ID-31A

Yahoo group: DVAPDongle
Date: 2013-03-01 15:58:24 UTC
From: ar11964
Topic: 2190 Message: 2190

I'm seeing some overloading problems on my new 440 DVAP, and I wonder if anyone has some ideas how to get around them other than keeping my ID-31A on the lowest power setting and as far from the DVAP as possible? If I operate closer than about two feet I get either no link or an unstable one. If I operate, say, 10 or 15 feet away I start to see some packet loss and then have to increase power. I makes operation a bit tricky. I'm in a very high IM location but I'm not sure that has anything to do with it. I've tried varying operating frequencies and squelch settings without effect. Thanks, Alan, K2RHK

2191. Re: [DVAPDongle] Read Only Reflectors?

Yahoo group: DVAPDongle
Date: 2013-03-01 17:03:48 UTC
From: Jeff Ellis
Topic: 2186 Message: 2191

I just tried just using my call as if I was going to a local repeater (like you suggested with a space in the 8th character) and I was able to link. to REF012C and I show up there on last heard. In DVAPTool I still have the Station Callsign locked to "KG7BMA A" on http://ref012.dstargateway.org it shows me as a remote user as the DVAP and Last Heard as the radio.

So I am guessing that is the correct configuration and gives systems a path to route back to my radio if someone tried to call sign route to my radio?

Thanks so much for the help. This is a lot different then what I am used to with ip routing.

I am loving the use of the DVAP so far. Its making my ID-31A useful.

73,
Jeff

Fran,

Open DVAPTool and next to DVAP Device" it will list a Com Port. You can try changing that. You might want to check your other software and see which com port it is configured to use.

I am not familiar with the other software but if it running at the same time sharing the com port could be problematic.

Wish I could help more.

Timothy McGowen

2193. Instructions adding DVAPTool to your Raspberry Pi with Autostart.

Yahoo group: DVAPDongle
Date: 2013-03-02 04:24:47 UTC
From: Mike
Topic: 2193 Message: 2193

Hi All,

After a few days of trial and error, I finally have my DVAP working with Robin's DVAPTool for RPi and operating as a standalone "just power it all up and you're done" auto start operation. With the help of Robin's instructions posted here in the group and a bunch of web surfing, I got it working quite well. I figured I would make it easier on the next ham and documented my steps. I added the procedure to this groups Files link. Please check them out and let me know if I left anything out.

73
Mike, W2SWR

P.S. Thanks Robin for all your work!

2194. RE: [DVAPDongle] BEWARE of 3rd party DVAP software for the Raspberry Pi

Are there instructions on how to use the DVAP tool to capture the factory settings on a 70cm DVAP?

Thanks

WA6JFK

From: DVAPDongle@yahoogroups.com [mailto:DVAPDongle@yahoogroups.com] On Behalf Of aa4rc
Sent: Friday, February 01, 2013 6:28 AM
To: DVAPDongle@yahoogroups.com
Subject: [DVAPDongle] BEWARE of 3rd party DVAP software for the Raspberry Pi

As several people have experienced, there is a flaw in the 3rd party software for the Raspberry Pi. The software wipes out the calibration data that is programmed into the DVAP at the factory.

If you use the software, you will have to recalibrate using the DVAP Utility software. It probably won't get you as close as factory settings but can bring it back to usable.

73,
Robin

2197. Re: Echo and Info commands in DVAP on ID-31A

Yahoo group: DVAPDongle
Date: 2013-03-02 13:11:42 UTC
From: Mark
Topic: 2189 Message: 2197

Sure, I ran across this issue on the 2-meter DVAP. Does not seem to be a problem on the 70cm version. Anyway, for some reason the DVAP does not seem to like just the command out in the 8th space with nothing before it. So, all you need to do is put something before the command, it does not matter what it is. So for clarity, I put the following:
Echo EInfo I
For me, this made it start accepting the commands.
Let me know if you have any more questions.

Whoops, I forgot one thing. If the programming software is rejecting the last character, my guess is that you are miscounting by one space and attempting to put the command in space nine.

Mike, thanks for putting the info in one location. I'm have a problem with some of the instructions (it may well be an operator issue, as the Raspberry is new to me) and assume you verified the instructions before you posted, correct?

Issue I'm having is with line "cd /.config & (enter)" reports "No such file or Directory"

2202. Re: Overloading on the DVAP with ID-31A

Yahoo group: DVAPDongle
Date: 2013-03-02 17:12:10 UTC
From: k9ruf
Topic: 2190 Message: 2202

Actually this sounds like the problem I was having with my 31 and then the 51. What you might be experiencing is that the DVAP is not on the frequency that you are displaying. If you download the DVAP utility which is a basic spectrum analyzer you can transmit with a known frequency source such as an another HT and see how acurate the DVAP receives it. The problem I was experiencing was the Dstar radio would not break squelch yet it would siplay an S meter reading. With the DVAP utility you can recalibrate the DVAP plus or minus a couple hundred Hz until the signal is centered on the frequencey you entered in the DVAP. Your problems may have started if like me you're using a raspberry PI since it resets the DVAP calibration from the factory. With this process you can bring it back in alignment. Hope I didn't confuse you but this made a world of difference for me with my issue.

Good Luck!

K9RUF
Dave

>
> I'm seeing some overloading problems on my new 440 DVAP, and I wonder if anyone has some ideas how to get around them other than keeping my ID-31A on the lowest power setting and as far from the DVAP as possible? If I operate closer than about two feet I get either no link or an unstable one. If I operate, say, 10 or 15 feet away I start to see some packet loss and then have to increase power. I makes operation a bit tricky. I'm in a very high IM location but I'm not sure that has anything to do with it. I've tried varying operating frequencies and squelch settings without effect. Thanks, Alan, K2RHK

2203. Re: Instructions adding DVAPTool to your Raspberry Pi with Autostart.

Yahoo group: DVAPDongle
Date: 2013-03-02 19:25:41 UTC
From: Les
Topic: 2193 Message: 2203

Mine won't autostart for some reason.

I created the autostart directory in the /home/pi/.config directory. I created the DVAPTool.desktop using the LeafPad editor file which looks like this:

DVAPTool.desktop

Name=DVAP Tool

Exec=/home/pi/DVAP/DVAPTool -open

Icon=/home/pi/DVAP/dvap.png

Terminal=False

I also created the DVAP directory in /home/pi which is a copy of the DVAPTool.desktop located in /home/pi/.config/autostart

Both files are executable but the DVAP does not autostart. If I try to run the DVAPTool.desktop manually I get the following errors from the script:

The DVAPTool starts without errors if I log into the desktop and connects to the correct COM port.

I'm probably missing something in the instructions, but so far have not seen what the problem is.

```
pi@raspberrypi ~/.config/autostart $ ./DVAPTool.desktop
./DVAPTool.desktop: line 1: [Desktop: command not found
./DVAPTool.desktop: line 3: Tool: command not found
./DVAPTool.desktop: line 5: -open: command not found
```

From: ab4bj
Topic: 2193 Message: 2205

I have also added this to my blog as an update to my original post. You can find it here (the autostart for DVAPTool is at the bottom of the post):

http://ab4bj.com/wordpress/2013/02/setting-up-a-raspberry-pi-to-work-with-a-dv-access-point-dongle-dvap/

Giving credit where credit is due, I agree that VK4TUX first posted this info (DVAPTool -open), but it took an email to me from John, WB4QDX to point me in the right direction (and I'm sure he got some if not all of his info from posts that he found here and elsewhere). Thanks to everyone on this forum and in the Dstar community at large for sharing this information - it seems to be a community effort and evryone deserves some credit for this process. After all, that is the essence of ham radio. I'm looking forward to further refinements that others may choose to post here.

Thanks and 73,

AB4BJ

2206. Link issue

Yahoo group: DVAPDongle
Date: 2013-03-03 05:08:29 UTC
From: Jeff
Topic: 2206 Message: 2206

I am betting this is a dumb issue, but I don't know what happened. Everything had been working great the other day. I tried to change the frequency to match one of the pre-programmed simplex frequencies to see if things would work better that way. That did not seem to work so I put it back to 435.500. When I give the info command or echo everything works. When I tell it to link to a reflector nothing happens. The command shows on the radio and on DVAPTool but it does not connect.

Here is an example of what shows in the DVAP Tool when I key up:
MY:KG7BMA /ID31
UR: REF010CL
R1: DIRECT
R2: DIRECT

Listening to KG7BMA

So the command is making it to the DVAP but nothing connects. I have tried with different reflectors in the list with the same results. With ECHO and Info working it seems like I am talking fine to the DVAP so I don't know why this is not working. I am running DVAPTool 1.04. I tried unplugging the DVAP and then putting it back on with no change in what its going.

What is strange is everything worked a couple of days ago.

Thanks

Jeff

From: Mike
Topic: 2193 Message: 2209

Hi Everyone,

I made a few mods to the instructions and just now replaced the DVAP_Tool.txt file which was somehow corrupt. I just tested the procedure and it is now working. Please make sure you are using rev 5 of my instructions and download a new DVAP_Tool.txt file.

Just a note: the pi's web browser dosn't like downloading stuff from yahoo groups too much. once I click to download any file, the browser gives me an error page, but it does in fact download what I wanted to my "/home/pi" folder.

Please let me know if you have any further issues.

> > After a few days of trial and error, I finally have my DVAP working with Robin's DVAPTool for RPi and operating as a standalone "just power it all up and you're done" auto start operation. With the help of Robin's instructions posted here in the group and a bunch of web surfing, I got it working quite well. I figured I would make it easier on the next ham and documented my steps. I added the procedure to this groups Files link. Please check them out and let me know if I left anything out.

2210. dvap rpi loading trouble

Yahoo group: DVAPDongle
Date: 2013-03-03 19:44:40 UTC
From: perryc
Topic: 2210 Message: 2210

I followed the directions, everything went fine until I typed in

sudo tar xzPf dvaptool-rpi.tgz
I got an error that reads as follows

gzip: stdin: not in gzip format
tar: child returned status 1
tar: error is not recoverable: exiting now

any ideas?
just about to put rpi thru insinkerator.....

Thanks, Dave. I'll give it a try. That's the same situation here; it'll show a full S meter reading but sometimes not break the squelch. I'm using the native Windows software, but it's possible that the DVAP is slightly off. I see the DVAP is very sensitive to the placement in the room. I thought I had found a location where it was happy but just now it turns out that it may not be so after all. The amount of stray RF floating around in this midtown Manhattan location - enough sometimes to even crash my wireless mouse - may have something to do with the problem too. I'll post the results.

Thanks again for the suggestion.
Alan, K2RHK

> Actually this sounds like the problem I was having with my 31 and then the 51. What you might be experiencing is that the DVAP is not on the frequency that you are displaying. If you download the DVAP utility which is a basic spectrum analyzer you can transmit with a known frequency source such as an another HT and see how acurate the DVAP receives it. The problem I was experiencing was the Dstar radio would not break squelch yet it would siplay an S meter reading. With the DVAP utility you can recalibrate the DVAP plus or minus a couple hundred Hz until the signal is centered on the frequencey you entered in the DVAP. Your problems may have started if like me you're using a raspberry PI since it resets the DVAP calibration from the factory. With this process you can bring it back in alignment. Hope I didn't confuse you but this made a world of difference for me with my issue.

2214. Re: Echo and Info commands in DVAP on ID-31A

Yahoo group: DVAPDongle
Date: 2013-03-03 21:35:17 UTC
From: ar11964
Topic: 2189 Message: 2214

Thanks, Mark. As it turns out, I was able to enter the commands into the ID31 directly, but not through the 31's programming software on Windows. I then saved to the SD card on the 31 and moved the card back to the Windows computer where I was able to continue with the setting up process. I appreciate your help. Thanks again, Alan, K2RHK

> >
> > Can someone please give me a hint how to enter DVAP E and DVAP I commands into my ID-31A? The programming software rejects the final character. On the HT itself the Simplex command seems to have disappeared after loading the dstar info repeater lists. Everything else, reflector linking, Unlink, etc. was programmed in using the software and micro SD card and works as expected. Thanks, Alan, K2RHK

If you have run DVAPnode, you may have wiped the calibration data in the DVAP. You can download DVAP utility from the web site and run it to check to see if you are still on frequency. If not, you can use the tool to adjust it.

73,
Robin

Hellow All,

My DVAPTool works well no other device like Monitor.
if you don't mind Japanese site, commands and files are same.
But I can't explain detail in English.

2379 pts/0 00:00:00 ps
pi@raspberrypi ~ $
```

If I try to ssh into the Raspberry and manually run DVAPTool&

```
pi@raspberrypi ~ $ ./DVAPTool&
[1] 2386
pi@raspberrypi ~ $ DVAPTool: cannot connect to X server

[1]+ Exit 1 ./DVAPTool
```

if acts like the desktop is not running, but I can see it in the process list:

```
pi@raspberrypi ~ $ ps aux |grep X
root 2000 0.1 1.5 16444 7096 tty7 Ss+ 06:48 0:01 /usr/bin/X :0 -auth
/var/run/lightdm/root/:0 -nolisten tcp vt7 -novtswitch
root 2178 0.1 1.4 9336 6568 ? S 06:48 0:01 Xtightvnc :1 -desktop X -auth /root/.Xauthority
-geometry 1280x800 -depth 16 -pixelformat rgb565 -rfbwait 120000 -rfbauth
/root/.vnc/passwd -rfbport 5901 -fp /usr/share/fonts/X11/misc/,/usr/share/fonts/X11/Type1/
,/usr/share/fonts/X11/75dpi/,/usr/share/fonts/X11/100dpi/ -co /etc/X11/rgb
pi 2210 0.0 0.3 12792 1500 ? Ssl 06:48 0:00 /usr/bin/lxsession -s LXDE -e LXDE
pi 2286 0.3 1.9 82216 8728 ? S 06:48 0:02 lxpanel --profile LXDE
root 2287 0.0 0.3 12792 1504 ? Sl 06:48 0:00 /usr/bin/lxsession -s LXDE -e LXDE
pi 2288 0.1 2.4 93592 11200 ? S 06:48 0:01 pcmanfm --desktop --profile LXDE
root 2308 0.3 1.8 79408 8472 ? S 06:48 0:02 lxpanel --profile LXDE
root 2309 0.1 2.0 88996 9396 ? S 06:48 0:01 pcmanfm --desktop --profile LXDE
pi 2388 0.0 0.2 4348 912 pts/0 S+ 07:01 0:00 grep --color=auto X
```

After logging into the Rsspberry using VNC and try to manually start DVAPTool from a SSH session, DVAPTool still cannot connect to the X server although I am currently logged in via VNC thru the desktop.

```
pi@raspberrypi ~ $ ./DVAPTool&
[1] 2391
pi@raspberrypi ~ $ DVAPTool: cannot connect to X server

[1]+ Exit 1 ./DVAPTool
pi@raspberrypi ~ $ sudo ./DVAPTool&
[1] 2392
pi@raspberrypi ~ $ DVAPTool: cannot connect to X server

[1]+ Exit 1 sudo ./DVAPTool
pi@raspberrypi ~ $
```

I can open a xterm in the VNC session and start DVAPTool manually without any errors.

2226. Re: dvap rpi loading trouble

Yahoo group: DVAPDongle
Date: 2013-03-04 19:11:29 UTC
From: perryc
Topic: 2210 Message: 2226

success at last :-)))
My problem was, not noticing on my lilput hdmi portable monitor with tiny tiny font, that the down load was not completed, of the tgz file.
I finally caught it out of the corner o my eye, and reran the upload several times to see small error posting in the command line fly by stating that there was not enough room on device.

Having used 4gb sd cards on all my other pi projects, I did not realize that the program and all the qt4 tools require at least a 8gb card, so I grabbed a 16 from my android phone, reformatted it, and started all over again.

After going through the directions, also paying particular attention to case sensitive letters like the command xzPf, everything came together around midnight.
I followed the auto start directions and, voila, success.

thnx for all the reply's and emails from every one.
now to get the wifi dongle going today, so I can use this in the car with my t-mobile 4g hot spot module.

thnx again everyone, and especially robin.
I think after that project, I have advanced 10 years with my progressive hair loss :-)

My next project, will be trying to get my android galaxy s2 to ssh into the pi to control it with out a monitor.
any ideas.

2227. using an android galaxy s2 to ssh into pi to control DVAP

Yahoo group: DVAPDongle
Date: 2013-03-04 19:15:40 UTC
From: perryc
Topic: 2227 Message: 2227

Has anyone tried to use their android phones to ssh or Putty into the rpi to control the DVAP dongle.
that's my next project.
anyone have any ideas.

Hi Brian. Just run the dvap utility from the download page. There is a calibration value on the screen.

Download a ssh client to your DROID and type in the IP address to the pi, you would be better off using vnc though to use robins software you need a GUI

Haven't tried from my Android tablet but I have used Putty and VNC to
connect to the Pi and start DVAPTool from my Windows laptop.
It works A.O.K.

From: ar11964
Topic: 2190 Message: 2233

Thanks to everyone who has replied to my note. I've finally found a location for my new DVAP which seems to be least affected by the ambient RF floating around in the middle of NYC, not to mention the hash generated by my computer, odd digital clock, etc. I may have mentioned that stray RF in this apartment is so severe that I often cannot use my wireless mouse. But if I leave the DVAP in precisely that location it works fine. I'm going to try using a well-shielded USB cable, looping it around a ferrite core, and maybe some aluminum wrapped around the DVAP -- but for now it's working fine.

For the record, I'm using the DVAPTool 1.04 only and have not used any other software with it.

Thanks again. Alan, K2RHK

I'm using the native Windows software, but it's possible that the DVAP is slightly off. I see the DVAP is very sensitive to the placement in the room. I thought I had found a location where it was happy but just now it turns out that it may not be so after all. The amount of stray RF floating around in this midtown Manhattan location - enough sometimes to even crash my wireless mouse - may have something to do with the problem too. I'll post the results.

> > > >
> > > > Actually this sounds like the problem I was having with my 31 and then the 51. What

you might be experiencing is that the DVAP is not on the frequency that you are displaying. If you download the DVAP utility which is a basic spectrum analyzer you can transmit with a known frequency source such as an another HT and see how acurate the DVAP receives it. The problem I was experiencing was the Dstar radio would not break squelch yet it would siplay an S meter reading. With the DVAP utility you can recalibrate the DVAP plus or minus a couple hundred Hz until the signal is centered on the frequencey you entered in the DVAP. Your problems may have started if like me you're using a raspberry PI since it resets the DVAP calibration from the factory. With this process you can bring it back in alignment. Hope I didn't confuse you but this made a world of difference for me with my issue.

If I operate closer than about two feet I get either no link or an unstable one. If I operate, say, 10 or 15 feet away I start to see some packet loss and then have to increase power. I makes operation a bit tricky. I'm in a very high IM location but I'm not sure that has anything to do with it. I've tried varying operating frequencies and squelch settings without effect. Thanks, Alan, K2RHK

2235. Re: Instructions adding DVAPTool to your Raspberry Pi with Autostart.

Yahoo group: DVAPDongle
Date: 2013-03-05 05:38:18 UTC
From: Jeff
Topic: 2193 Message: 2235

hi all,

First I would like to thank Robin, aa4rc, for all the effort required to port DVAPTool to the RaspberryPi platform and also to thank Mike, w2swr for putting together the autostart pdf file.

I did want to share the one difficulty I had in getting the RaspberryPI and the DVAP to work as an autostart solution and thought I'd share my troubles and solution to same.

For my configuration I wanted to use my PI with a wireless USB adapter. In this way I could use the wireless network at home or use the hot spot on my phone if I wanted to be on the go. The adapter I used was an ASUS USB adapter. It works fine with the RaspberryPI and was fairly cheap.

I followed the installation instructions for the DVAPTool software. It worked wonderfully. Then I followed the PDF in the files section of the group in the DVAP for Raspberry Pi Autostart folder. After rebooting things seemed to work fine. I got the blue blinking light on the DVAP but got a "Gateway Unknown" error message on trying to connect to anything. I did all of my installations and configuration from a putty/Xming remote XWindows session. I rebooted with the PI plugged into a monitor. All looked good (blue light on DVAP and window up and open on the screen) but received the same "Gateway Unknown" when trying to connect to anything. Mind you the it worked perfectly when DVAPTool was started manually. On a hunch I plugged in a network cable and rebooted. This worked which lead me to believe that the wireless adapter was taking longer to connect and not ready by the time that DVAPTool was starting. My solution was to insert a delay in the starting of the DVAPTool program. I inserted a 90sec delay by creating a startup script (DVAP_start.sh) and inserting it into the DVAP_Tool.desktop file located in the autostart folder replacing the DVAPTool. The modifications are listed below.
This solution worked and provided more than ample time for the wireless card to locate and connect to the network and obtain an IPaddress.

```
##########################################################
File: DVAP_start.sh

#!/bin/sh

# wait 90 sec
sleep 90

# Start DVAPTool
exec /home/pi/DVAP/DVAPTool -open

##########################################################
```

run the following command from the /home/pi/DVAP directory

```
chmod 755 DVAP_start.sh
```

This will make the DVAP_start.sh file executable.

##

File: /home/pi/.config/autostart/DVAP_Tool.desktop

```
[Desktop Entry]
Name=DVAP Tool
Exec=/home/pi/DVAP/DVAP_start.sh
Icon=/home/pi/DVAP/dvap.png
Config=/home/pi/.config/DVDongle.com/DVAPTool.conf
Terminal=false
Type=Application
Catagories=Application;
StartupNotify=true
```

##

If anyone wants a prebuilt image for R PI that boots up and runs DVAPTool, about as close to plug and play as you can get, with instructions.

All you have to do is put your callsign and frequency in.

And if you want it is also running VNC so you can remote into it.

Email me at

WA6JFK at me.com and put something in the subject line like

Send me the link to DVAPTool image

I will gladly do so.

2239. Trouble getting the DVAP to work with my Netbook

Yahoo group: DVAPDongle
Date: 2013-03-05 20:18:32 UTC
From: w4dca1
Topic: 2239 Message: 2239

I received my DVAP and got it working just fine with my desktop Windows XP machine, but I cannot get it to work with my Toshiba Netbook, which is running Windows 7 starter. When I first connected it to the Netbook I saw where it said new device found and then it said new device ready to be used, just as it did on the desktop machine. However on the Netbook, no Wizards came up to do the set up as it did on the desktop. I waited in case it was just slow loading but the Wizards never came up. So I thought I would uninstall the DVAP and try again, but now when I go back and connect it, nothing happens. The green light is on and pulsing, but nothing else happens as if the computer (Netbook), does not see it connected any longer. It still works on the XP desktop, but I really would like to get it to work on the Netbook so I can have it when I travel. I hope I have not done something where it can not be corrected for the Netbook. Any help and guidance will be greatly appreciated, and keep in mind I am not a real strong computer type of guy, but can and will follow directions if kept simple. Thanks....David....W4DCA

Hi David. Try downloading the latest FTDI USB drivers from www.ftdichip.com and install them. They should have a self extracting/installing executable there.

If that does not help, try running DVAPTool version 1.03 to see if that makes a difference. A handful of folks have had issues with 1.04 finding the device.

Robin.....I went to the FTDI site to do the install, and following their instructions, when I go to my "Device Manager" on my computer, it does not show the DVAP at all even though it is connected.But in the Device Manager, I do see under ports a "USB Serial Port (COM 13)" and under Universal Serial Bus Controllers it does show a "USB Serial Convertor" ,but again the DVAP does not show under Device mamanger so I can update the files as it shows in the FTDI site. Forgive me if I am being dense on this, but I do not know what steps to take to get the DVAP to show under the Device Manager..

When I first connected it to the Netbook I saw where it said new device found and then it said new device ready to be used, just as it did on the desktop machine. However on the Netbook, no Wizards came up to do the set up as it did on the desktop. I waited in case it was just slow loading but the Wizards never came up. So I thought I would uninstall the DVAP and try again, but now when I go back and connect it, nothing happens. The green light is on and pulsing, but nothing else happens as if the computer (Netbook), does not see it connected any longer. It still works on the XP desktop, but I really would like to get it to work on the Netbook so I can have it when I travel. I hope I have not done something where it can not be corrected for the Netbook. Any help and guidance will be greatly appreciated, and keep in mind I am not a real strong computer type of guy, but can and will follow directions if kept simple. Thanks....David....W4DCA

Brian and Ed,

Thanks for the image.

I downloaded your work and flashed it to the SD card. It fired up right away. I entered my call and rebooted the PI. The software made the internal configurations and auto started making Robin’s software very handy for WIFI hotspot applications either through an in home WI-FI network or through a cellular hotspot.

Great job!

Thanks,

Mike – W6OSO

Just FYI

The image was created by Ed, KB6THO

I helped a little with some testing and the instructions.

WA6JFK

Enjoy!

If anyone wants a prebuilt image for R PI that boots up and runs DVAPTool, about as close to plug and play as you can get, with instructions.

All you have to do is put your callsign and frequency in.

And if you want it is also running VNC so you can remote into it.

Email me at

WA6JFK at me.com and put something in the subject line like

Send me the link to DVAPTool image

I will gladly do so.

WA6JFK

From: Brian Frobisher
Topic: 2252 Message: 2252

Here is the link to a premade image that you can load onto an SD card and have an "Almost Plug & Play" experience.

There are instructions and also a readme

This image was created by Ed, KB6THO and he wants to share it.

He will make improvements as time permits, but this one really works now, very well.

I have received many compliments from people who have D/L and used.

Brian

From some long-ago notes:

73
Ted
W1GRI

RADIO SETUP:

* Enter your callsign into the MYCALL field of your radio.
* Select DV mode and configure simplex operation, usually by holding down the "DUP" key until there is no "dup+" or "dup-" on the radio display. You do not need to enter RPT1 nor RPT2 since the radio will place "DIRECT" in both when in simplex mode.
* Enter the simplex frequency you programmed into the DVAP.
* All commands are entered into the URCALL field as detailed below.
* Use the lowest power setting on your radio to prevent overloading the DVAP front end.

DVAP USE

Just like the gateway, the DVAP uses the URCALL parameter for linking and commands. For ease of use, program memories for your favorite calls, a "QSO" memory (CQCQCQ) and an "Unlink" memory (U). The QSO and Unlink memories are generic, so you can use them with any DVAP link you make.
DVAP QSO: Set your radio to your link memory, then key up to connect. After you hear the "Remote System Linked" message, switch to your QSO memory for the duration of the QSO. When you want to drop the connection, switch to your unlink memory and key up.

DVAP COMMANDS (URCALL):

* "DVAP I" (request voice ID from the DVAP)
* "DVAP E" (key down and speak for echo test)
* "CQCQCQ " (transmit to a connected system)
* "xxxxxxmL" (to link to a repeater or reflector, place the callsign of that system
* in the first six characters of the URCALL field, replace the "m" in the 7th character with the module you wish to link to, A, B or C. Use "L" in the 8th character to indicate the LINK command. For example, to link to Reflector 001 module C, use "REF001CL" in URCALL. To link to gateway W4DOC module A, use "W4DOC AL" in URCALL.
* " U" (7 spaces before U. Unlink from a linked gateway/reflector)

DVAP LEDs

* Green: Slow pulse when connected to PC/Mac; when connected to a remote system, switches to show DVAP receive activity.

* Red: DVAP transmit activity.
* Yellow: Internet packet loss during transmission.
* Blue: USB activity from the PC/Mac to the DVAP. You should see the blue light blink about once per second when connected to DVAPTool (keepalive packet), with fast flickering during transmit and receive activity.

Subject: [DVAPDongle] D Star DVAP Connectivity. Help request

Hello Gents....

I bought an ID 51 yesterday and a DVAP.

I had an Icom 80 some years ago and registered though have not been on the air since 2008 (with D Star).

So I came home, unboxed the gear. And dutifully began "relearning" D - Star/ DVAP and D Plus

* D Star INFO <http://query.ki4swy.org> Query confirms that I am registered from 2008 (Call sign: wa4d)
* Reviewed the 3 hour Very excellent WB4QDX John Davis D Star You Tube Tutorial from Dayton 2012
* Loaded RTS Software with Southern Calif. D Star Freqs for starters
* Loaded Drivers, connected PC to ID-51. Successfully
* Loaded Drivers and DVAP Tool 1.04 Successfully on a Win Laptop
* DVAP Lights show Normal. Pulsing Green at first. Blue Flash in Idle
* DVAP Tool Dialogue Box says Device Opened.
* The DVAP Tool app Recognizes the Dongle, My Station Call and DVAP device Comm port
* The DVAP tool does NOT Populate the fields for MY: UR":R1: R2:
* I scanned the CD manual of the ID 51. Enough to get her pgmed and running.

All that said, I remain "land locked" as it were.

1) The DVAP tool app and DVAP hardware all show "Normal" operation

Does not the DVAP tool go out and scan for my registration?

Is it possible my registration is corrupted?

2) How does my ID 51 "link" with the DVAP.?(Yes, I realize simplex RF...but what is the protocol? Is this memory related? Pgming? Will it not work as

the DVAP App does not appear to have talked to the "Registrar"?

3) Is my failure to connect possibly related to improper programming of the radio?

I've got a Radio, I've got a DVAP. And I'm stuck!

If anyone has the patience to answer these elementary questions, then my faith in mankind will surely be restored.

And despite this delay, I've much enjoyed the introduction to D-Star and the architecture.

Thank You

Regards,

Mike/wa4d

Excellent mini tutorial Ted!

Long ago noted still valid

The ID 51 is a whole lot of radio. I 'v long been an HF SWL. But this mode looks more fun than I gave it credit for.

I'd like to start a tech discussion on one of the reflectors this summer

Thank you Ted!

Hi Robert. I would first try downloading/installing the latest FTDI USB drivers from www.ftdichip.com. Then reboot without the DVAP connected and reconnect.

DVAPTool automatically finds any FTDI based device and populates the device field. You cannot enter nor delete an entry from that field.

2270. Raspberry Pi HELP !!!

Yahoo group: DVAPDongle
Date: 2013-03-13 12:48:57 UTC
From: benybarr
Topic: 2270 Message: 2270

I just purchesd a Raspberry Pi,Should have it by Friday !!!!
I am facinated by the idea that i can connect it to my DVAP and dont need to keep my desk top computer on all the time...I am planning to use it true my wireless router direct,however the BIGEST problem is that I have NO idea where to start...and I mean it !!!
I am clueless when its come to computers (took me a month to get my IRLP node running)
I am looking for some one who is willing to help with this project(on your won risk),I understand time is very valuable for people,so I am willing to compensate the brave one....please contact me of list
at benybarr@...
Thank you very much

2275. Add button to shut down pi, and 4g hot spot interconnect for mobile dstar

Yahoo group: DVAPDongle
Date: 2013-03-17 06:51:42 UTC
From: perryc
Topic: 2275 Message: 2275

Now that we have the pi operating fine on auto boot, I was wondering if just unplugging the pi might corrupt files in the long run.
Perhaps we could figure out a way to add a small push button to start and cause the PI to do a proper shut down.
Maybe a button tied to the gpio pins
And well we are at it, another button to acknowlede the small window, stating we are running the lastes t version of robins software, and nowt blocking the dvaptool window.
I finally got my DVAP working with my PI, a wifi dongle, and a T-mobile 4g hot spot, for when I am not around a dstar repeater.
It works great.
I had one problem, where after enterig all the access points I would be using, with the wifi dongle, I could not connect to a different wifi source, once I connected through one of the wifi points.
I tried enabling all the points, with WPA, AND WPA2 on twomof them, but found mine would not connect to a new ap.
Insolved this by just having 4 16 gb cards with only one ssid, and password, and just swapped them out when I wanted to change internet connections.
Spark fun just came out with 3 very neat. HDMI small touch screens with a small shield, that works great with the PI.
I am lookig forward to orderig a few of them.

2276. 70CM DVAP screwed up

Yahoo group: DVAPDongle
Date: 2013-03-17 08:22:08 UTC
From: Brian Frobisher
Topic: 2276 Message: 2276

My 70CM DVAP has been working flawlessly.

I have been using it with KB6THO's "PI/DVAPTOOL" image.

Well, today I got experimental and downloaded an image from "Down Under" fired it up on my PI with the DVAP connected and now my DVAP is all screwed up.

I think it must be off frequency or something.

The lights look normal but nobody's home.

I need to send it in for repairs I guess.

Topic: 2276 Message: 2277

Brian;

Sounds like you got bit by the calibration zeroizing bug.

Last night I did a little experimentation and found a way you can recalibrate the DVAP without a freq counter.

Put the DVAP on a PC, and run Robin's DVAP Utility software. Connect to the DVAP. If the calibration value shows zero after connecting, then the software you downloaded probably cleared the calibration value from your DVAP. Here's how to experimentally set it:

Set the frequency in the DVAP Utility program to your preferred simplex frequency. Set your HT to the same freq in DV mode.

What you want to do is use the calibration value to find the edges of the passband on your receiver. Increase or decrease the calibration value in increments of 100 and tick the "TX On" box--repeat until until the HT does not show a signal when TX On is checked (and the xmit LED is lit on the DVAP). Then go back by half (50)...if there's no signal, back up by half again (25), or if there is, go the other way by 25...and keep bracketing the value this way until you find the calibration value where the signal just starts to drop off from full scale on the HT's S-meter. You can change the calibration value in the window while "TX On" is still ticked, but give it a few seconds to change after making an input. Once you find the edge, write that value down. Then you have to go up/down and find the other edge of the passband the same way, which on my IC-92AD is about 440 Hz wide. Take the average of those two values, and set it in the calibration window. That value should work--if it doesn't, try tweaking it up/down in small increments--that average value should be very close, though.

Example--I found the passband edges to be at calibration values of -125 and -665. The average of them is -395, which was the original factory calibration value set before I started.

Topic: 2276 Message: 2278

Brian,

First off have you tried the DVAP plugged into your laptop or computer directly and running DVAP Tools? If it works as it should that way then maybe you have some ISO configuration problems.
Can you be more specific on what you downloaded and installed. The web page and Version or release date.

What radio are you using with your DVAP. Also you mentioned that you had been using a version from KB6THO that worked...so I am assuming that you have a Raspberry PI that was working. Some of the software like ircDDB Gateway needs to be configured to work on your Raspberry PI. This can be very confusing if your are not familiar with how to do that.

If by chance the DVAP is off frequency there is a tool called DVAP Tools that can be used to check it. However I would not attempt to do that unless you know what your doing.

You should be able to get help from the PAPA group there are many people using the DVAP & RPI.

2280. Re: VNC

Yahoo group: DVAPDongle
Date: 2013-03-17 22:25:54 UTC
From: w6kd
Topic: 2253 Message: 2280

Chris;

VNC stands for Virtual Network Computing--it's a set of programs used to allow remote access on one computer by another. If you've ever used or seen something like PCAnywhere, that's the general idea.

There are two programs you'll need--a VNC server that runs on the Pi, and a VNC client that will run on the remote PC.

There are several good free VNC servers you can run on the Pi--X11VNC and TightVNCServer both come to mind. I use X11VNC on the Pi because it gives access to the console session running on the Pi--what you see from the remote computer is what a person looking at a monitor on the Pi would be seeing. TightVNC spawns a new virtual session when it runs, so you can't see anything that was, for example, autorun at boot time because it's running in a different user session.

That said, I do use the Windows version of TightVNC as my VNC client. No problem with using X11VNC for the server and TightVNC as the client. www.tightvnc.com is a good place to start.

There's no reason this cannot happen, but what would be better is the DVAP integrated with Rpi with a web server front-end allowing you to connect from any web browsing capable device. The front-end would allow you to change any settings in the DVAPTool software. I am thinking of something similar to how you connect to a router. It shouldn't be that difficult; we would have headless RpiDVAPs that we could still control without hooking up a monitor or keyboard. I think I have a new project for myself!

James, yes ?the first thing I did was take the DVAP to the PC and make sure it was no the pi etc.

Yes thanks.

I actually think my DVAP is having more issues than just being off frequency (and I don't think it is off frequency after doing to tests)

It needs a trip back to the DVAP repair depot.....

It's possible his hack image had nothing to do with the demise of the DVAP, but it seems mighty coincidental, but again who knows.

Gee, thanks Adrian.

Again, this could all be coincidental, my posting was not to put blame etc, but possibly save others crapping up their DVAP's if this was even possible using the image you posted.

?

Sometimes pays to read the readme file first and do the gui settings upfront, as this was/is setup with a 2m dvap seen working (with your vnc viewer) :

vk4tux.no-ip.org:5900

no password needed > live right now

with exactly the same fedora 17 remix image on the rpi seen realtime Auto start/auto boot with many program options.

You can type reboot in terminal and come back to it 3 minutes later via vnc.

20 hams now report to me it is working great , 3 with 70 cm dvaps, but they read the readme first and setup the programs on a dry bootup.

2289. RpiDVAP Integrated Proposal

Yahoo group: DVAPDongle
Date: 2013-03-18 15:19:36 UTC
From: kv4lh
Topic: 2289 Message: 2289

Project Goal: Fully Integrate Rpi & DVAP under one housing unit (i.e. same box)

- Add Wireless Networking

- Create Web-server Front-End for access to DAVAPTool over local network

- Everything Autostart

- Streamline OS for DVAP exclusively

- Plug-N-Play Everywhere!

What are your thoughts?

Where would I start to build a case/housing for both units under one roof?

Does anyone know if there is an API of some sort to the DVAPTool?

We could use The Apache Web Server, the only things missing is an interface between the web server and the DVAPTool. Does anyone know of anyone working on this already? If not, who wants to join me on this project?

From: jeff robinson
Topic: 2271 Message: 2290

Then maybe we could have a backup DVAP hotspot on our local HSMM-mesh using our Austin tunnels. One way to get VOIP on the mesh, if the local repeaters are down and we have no local internet service. I like it!
Jeff, N5XHI
http://www.hsmm-mesh.org/

There's no reason this cannot happen, but what would be better is the DVAP integrated with Rpi with a web server front-end allowing you to connect from any web browsing capable device. The front-end would allow you to change any settings in the DVAPTool software. I am thinking of something similar to how you connect to a router. It shouldn't be that difficult; we would have headless RpiDVAPs that we could still control without hooking up a monitor or keyboard. I think I have a new project for myself!

From: ab4bj
Topic: 2291 Message: 2291

After seeing the great work by VK5REX and W5TMP to assemble a DVAP and RPI in a "go box", I tried my hand at building one over the weekend. Here are the results of my efforts. A fun weekend project.

http://ab4bj.com/wordpress/2013/03/a-go-box-for-the-dvap-with-raspberry-pi-for-dstar/

Adrian,

Can you direct me to any file named readme in your dropbox?

There is a "Read_This.txt file, is that the one you are talking about?

It really does not give any warning about doing any changes before connecting your DVAP.

Again, I think my DVAP has issues probably not caused by your image, it was just strange that it happened when I tried V3.

I am pasting the text from your "Read_This.txt" below.

Can you show me the warnings to initially boot without DVAP installed?

Thanks

WA6JFK

"Remix notes

Remember to change the callsign and ip values to your own.

dvapnode calls a script which also brings in dcsgateway, so leave dcsgateway unchecked
in autostart unless you need it otherwise to work with a different program.

You can edit dvapnode command from dcstux.sh to dvapnode -gui to enable single execution for
that entry.eg if you need dvapnode with a different program and do not need dcsgateway,
or you can replace dcsgateway in dcstux.sh in (usr/bin) to another program name, or more,
just add by using & program-name. & between the program names.

If thats all too hard, you can contact me

vk4tux@... and I'll upload a custom image for you.

see

https://www.dropbox.com/s/fvziacplxta6ae9/remixautostart.jpg

to show autostart select location from

Top left > Panel > Applications Menu > Session & Startup sub menu.

Aircard & wlan support is in place, any device can be added via network manager.

Rpi repo is installed, and can be updated for for repo updates if available
@

http://vk4tux.no-ip.org/IMG/rpm/Rpi.repo

sudo yum update (name of dstar program you want updated)

This keeps your free space at max, instead of just sudo yum update, which
will
consume some, but your choice.

Further future image's will be made available by me, and also later for fc18
remix.

At the moment for image size (Fits on 4GB card) and capability fedora 17
remix is
hard to beat

To: DVAPDongle@yahoogroups.com
Subject: [DVAPDongle] Re: 70CM DVAP screwed up

Sometimes pays to read the readme file first and do the gui settings
upfront, as this was/is setup with a 2m dvap seen working (with your vnc
viewer) :

vk4tux.no-ip.org:5900

no password needed > live right now

with exactly the same fedora 17 remix image on the rpi seen realtime
Auto start/auto boot with many program options.

You can type reboot in terminal and come back to it 3 minutes later via
vnc.

20 hams now report to me it is working great , 3 with 70 cm dvaps, but
they read the readme first and setup the programs on a dry bootup.

Re-send. I found how to auto-start DVAPTool, but I still stuck on:1 -- how to not have the popup "You are running the latest software" dialog box, and2 -- the fact that the "lock callsign" checkbox is always checked (I run two ID51a's in the house -- one for my wife and one for myself), so I need the auto-start to have this be unchecked -- it always seems to start up with it checked by default. Any suggestions on how to handle these two options from the command line? Thanks. 73. _-_-_ Dave, AE7TD

Subject: RE: [DVAPDongle] RE: Autostart DVAPTool on Windows

And the "lock callsign" checkbox is always set. As I run multiple radios in the house (between my wife and myself), I find that I must uncheck the "lock" to be able to use multiple MY settings through the DVAP.

So in addition -open, How do I deal with these two 'interactive' requirements? Almost there . . . but not quite. :-)

Thanks.

Dave

I am running the DVAPTool in Linux but the solution to one of your problems should be the same in Windows. When I envoke the command line I add - nolock (i.e., DVAPTool -nolock -open -frequency 146550000) ... the -frequency is optional but the -nolock will uncheck the "lock callsign" checkbox.

2313. DVAP and IC-91AD For Sale

Yahoo group: DVAPDongle
Date: 2013-03-23 00:40:14 UTC
From: Arnold
Topic: 2313 Message: 2313

I have had my DVAP about a year and my IC-91AD a couple of years. I first built one of Mark's hotspots and had fun getting it together then sold it. Now because of lack of time and interest I am going ahead and sell my DVAP and radio. The DVAP has had very little time on it. I purchased it after I sold my hotspot just to have something more convenient. I have the original box, antenna and a USB cable. It works great as I just checked it out on Wednesday night. I will take $200 for the DVAP. The IC-91AD has been great for me I just don't use it anymore and there is no reason I should keep it. It comes with the original antenna, 2 batteries, speaker mike, wall wart charger, drop in charger, and the Icom serial programming cable. I am asking $500 for the radio. I am not a big talker on the radio so there are no problems with it. My call is K4AHH in TN. If you are interested in either of these just email me and we can arrange a PayPal transaction.

Hey there from Andy, N9NRA. Looking at the info ya provided i see it says "checking callign (KB9BNY) aganst station callsign (KB9BNY B). based on this i`m thinkin` this is an issue of authentication. to wit: registeration, in short, the callsign you have isn`t matching up with the regestered callsign, and the system is having an issue, you have no letter in the 8TH position and the callsign it`s checking against does. This might be the reason you`re having this problem, as what happens in this case is you can connect, but only in "listen only" mode (you`d hear a comback from the gateway something like, "remote system linked, recieve only". I know this is just a guess, but based on what you said and what i saw in the log ya posted it looks like this is your problem. Ya might try making sure that ya don`t have anything after your call, that should fix your issue, if not then it`s something else entirely different causing it. Good luck to you and 73. Andy, N9NRA

Andy,

I have tried it both ways and I get the same result.

Thanks

Erik

Hi Erik. If the KC9OKW repeater is not syncing properly with the US Trust Server, you could see this issue. You will need to check with the admin of that repeater. Ask him to check is gateway sync.

73,
Robin

2318. Changing From 2M to a 70CM DVAP

Yahoo group: DVAPDongle
Date: 2013-03-25 15:36:38 UTC
From: Neil
Topic: 2318 Message: 2318

Hi -- My Icom 31A is on the way so I sold my 2M DVAP and bought a 70cm one. I will be using it with the new 70cm HT and with the 70cm section of my 2820H that I used to use the 2M section on for DSTAR, My question is -- am I just going to have to plug in the 70cm DVAP and use my already-installed driver and Tool (1.04)? I had thought the driver might be different but unless I am missing something on the website I guess not?

2321. RE: [DVAPDongle] Re: 70CM DVAP screwed up

But, if someone wants to run DVAPTOOL only and wants about as close to "Plug and play" as you are going to get...

This image is for you.

Brian, yes its a shame did not dd from a 4GB card to provide more options for card burn.

I have developed an R6fix remix image that includes one click scripting to revert to command line only (No X)autologin mode running certain dstar services, d-rats being one of them and it works very well. The cpu load of course is far less.

communication is done ssh;

ssh -Y ham@...-ip.org <mailto:ham%40vk4tux.no-ip.org>

vnc in graphical mode;

http://vk4tux.no-ip.org/vnc.html & click ok on applet to view.

x programs from the rpi can run on your client x server.

A simple restore.sh run in cli or > #startxfce4 graphical boot to then click a 'GD restore' desktop launcher takes it back to graphical autostart/login boot configuration.

I look forward to Robins upcoming DVAPTool service (dvaptoold ?) to run in this setup, hopefully as a service like;

dvaptool.service in lib/systemd/system/

```
[Unit]
Description=DVAPTool Service
ConditionFileIsExecutable=/path/dvaptoold
After=syslog.target network.target

[Service]
Type=forking
User=ham
#Edit the -logdir path to reflect where you want the logfiles to go.
#Edit the -confdir path to reflect where your config data is located.
ExecStart=/usr/bin/dvaptoold -daemon -logdir /var/log/ -confdir /etc

[Install]
WantedBy=multi-user.target
```

The service.sh script systemctl enables the services, sets up getty@ tty1 cmd line autologin & sets .../systemd... target to multi user (cmd mode > No X).

The restore.sh script returns everything back to original configuration.

Adrian ... vk4tux

2323. Can't Change DVAP Settings on RPi

Yahoo group: DVAPDongle
Date: 2013-03-29 04:09:54 UTC
From: KC9IL
Topic: 2323 Message: 2323

I have my Pi up and running on Autostart. Works beautifully.

I tried to change the power level or uncheck the "lock" box, but any changes won't "stick" on the next boot up. Am I missing something here?

Thanks & 73,

Warren

Nope, it should be the same as far as I know. Also uses the same tool to access. All you should do is change the Frequency (Hz) to a 70cm frequency.

Mark

2326. Newbie qestions

Yahoo group: DVAPDongle
Date: 2013-03-29 18:40:48 UTC
From: Dave
Topic: 2326 Message: 2326

Hi to the group,I am looking at purchasing the dvap unit and looking at running it with a raspberry pi set up.
can anyone point me in the right direction with regard to the best os for the raspberry,also what size of memory card to use.
the system will be only used for the dongle and needed software and would like to set it up to auto start everything on power up.
any help appreciated thanks.

2327. Setup Help OSX

Yahoo group: DVAPDongle
Date: 2013-03-30 05:33:54 UTC
From: charlie_kc2ped
Topic: 2327 Message: 2327

Let me start by saying I am on a MacBook Pro under OSX 10.7
I have an ID-31a and a 70cm dongle
I have downloaded, installed and mostly configured DVAPTools
When I key down the green light lights up
I got connected to reflector 20A but as receive only
Reading here I learn that is because I entered my callsign with _A at the end
After closing the DVAP, changing the callsign to agree with the way I registered with the gateway, and opening the DVAP I am not even able to connect to 20A as receive only
If I send a DVAP ___I the radio says DVAP Dongle and nothing more but scrolls Not Connected
That I was able to connect to 20A as receive only says that my staved UR is programmed correctly and that, at least when I was using the _A my computer is properly communicating with whatever black box it talks to out there on the internet
So what am I missing here

Also, I notice that when I have the squelch set to Auto on the ID-31 the green deceive light is on almost all of the time although there is no signal to break squelch
If I manually set squelch to 2 the light goes out
Do you have to manually set squelch when operating on a DVAP or do I need to drag the squelch slider in DVTools farther to the right

Thanks

2328. Re: Changing From 2M to a 70CM DVAP

From: Neil
Topic: 2318 Message: 2328

Yes, that's exactly what happened. No changes were needed at all other than choosing a 440 frequency. Work very nicely with the 31A.

I will be using it with the new 70cm HT and with the 70cm section of my 2820H that I used to use the 2M section on for DSTAR, My question is -- am I just going to have to plug in the 70cm DVAP and use my already-installed driver and Tool (1.04)? I had thought the driver might be different but unless I am missing something on the website I guess not?

2329. Re: Can't Change DVAP Settings on RPi

Yahoo group: DVAPDongle
Date: 2013-03-30 14:08:07 UTC
From: rsmith.1141
Topic: 2323 Message: 2329

Is this with Robin's software? If so, close the DVAP connection, exit the software and return to the Pi desktop. Then open the file manager and start the software from the desktop. Then if you change the settings from there and exit the software it should remember the settings the next time you autostart. At least this worked for me.

Hope this helps...

Hi Charlie. You have registered a "space" terminal correctly so make sure you have a space in the 8th character of the callsign field both in the radio and in DVAPTool.

I looked through the logs and see that you used an "A" sometimes.

Robin,

We checked the sync status all is normal. This behavior is replicatable on two other repeaters. I can link, but when I transmit, my transmission isn't repeated on the repeater.

2333. Callsign registration?

Yahoo group: DVAPDongle
Date: 2013-03-31 02:35:12 UTC
From: Steve Garwood
Topic: 2333 Message: 2333

I just fired up my VHF DVAP after a period of inactivity with it. Do I have to register my callsign with an "A" after it or something similar?

It was working previously with just my callsign entered in the box with no problem. Now I attempt to connect and go into Receive Only.

I had made no changes, using the same laptop, IC-92AD and the DVAP.

Thanks
Steve, N0CZV

Hi Steve. I don't see your callsign as being registered. Perhaps your registration gateway went away?

You will need to register again. You can follow this instructions at www.dstargateway.org for that. Just select your closest gateway.

Thanks Robin,

I've already started the process through a local gateway website. I had also noticed that my IC-2820H would not transmit, though receive is fine. Not sure what happened to the site that I had registered through. I was not sure how to check if I was registered. I did not have a login to check unless there is another way.

2339. AA4PP: Gateway Unknown

Yahoo group: DVAPDongle
Date: 2013-04-01 12:41:30 UTC
From: Dave S.
Topic: 2339 Message: 2339

Good morning, all,
Yesterday was my first successful (albeit partially) use of the DVAP. I first attempted to connect to my club's local repeater, AA4PP without success. I then attempted to connect to a repeater I'm familiar with in Lakeland, FL, KJ4ACN -- that was successful. I then tried AA4PP again...no luck. I get the message "Gateway Unknown". Is it me, is it the club repeater, or something else? Thanks for any help.

Best regards,
Dave Sheppard W2PAX
Naples, FL

I can speak for my experience. I have the ID-880H in my truck and the dvap mounted under my dash. I run the 880 on low and so far have not seen any ill effects.

I would like to hear from Robin on this as well.

As long as you separate the radio antenna from the DVAP antenna, you should be OK with 5 watts. A few feet should be good.

Dave,

I had the same issue on our local repeater yesterday. I was installing the software on a new notebook PC. Initially, I thought it was a problem with the new PC or some incompatibility; however, everything worked fine on my other PC with the same software & hardware. In the end, it turned out that the repeater itself was having problems. I contacted the repeater owner and they got everything working and all is well now.

Randy,

Thanks for your comment. It rang a bell in my memory. I was running Robin's software in a virtual desktop. I think what was happening was I was making changes in the virtual copy. Once I remember to shut down all instances of the DVAP software and reopen, then make changes, all is well.

George,

Use this image. Just burn to a 16GB card and follow instructions. They say it will fit on an 8GB card, but I tried and it failed. 16GB card works like a champ.

https://www.dropbox.com/sh/mfyw3j6dwkpmriz/V56pE5JqTL

Have fun!

73,

Warren

I was connected to 30c this afternoon. I can connect to any reflector without issue, its just the repeaters.

Looking at the info ya provided i see it says "checking callign (KB9BNY) aganst station callsign (KB9BNY B). based on this i`m thinkin` this is an issue of authentication. to wit: registeration, in short, the callsign you have isn`t matching up with the regestered callsign, and the system is having an issue, you have no letter in the 8TH position and the callsign it`s checking against does. This might be the reason you`re having this problem, as what happens in this case is you can connect, but only in "listen only" mode (you`d hear a comback from the gateway something like, "remote system linked, recieve only". I know this is just a guess, but based on what you said and what i saw in the log ya posted it looks like this is your problem. Ya might try making sure that ya don`t have anything after your call, that should fix your issue, if not then it`s something else entirely different causing it. Good luck to you and 73. Andy, N9NRA

2354. DVAP Audio/Signal

Yahoo group: DVAPDongle
Date: 2013-04-05 16:18:48 UTC
From: rustyb78
Topic: 2354 Message: 2354

Should the audio/signal/carrier coming from the dvap be 100% constant?

As I listen to mine, the audio cuts out. And when I say audio, I really mean the signal.

Using the DVAPUtil, I did a transmit test of the dvap and with a dead carrier I still hear a break in the signal. This happens about every 1 second or so.

Thanks..

Rusty

2363. DVAP Problem

Yahoo group: DVAPDongle
Date: 2013-04-11 13:11:23 UTC
From: kf4hrkf4hr
Topic: 1238 Message: 2363

I recently purchased a DVAP unit through Amateur Electronic Supply. Initially the driver and software loaded fine and the unit was working perfectly (linking to D-Star repeaters was no problem). Then I had a software issue with my PC and had to reload Windows 7. After reloading Windows my PC worked fine but I wasn't able to get the DVAP working again. I've tried reloading the DVAP Drivers and DVAP Tool Software multiple times and on 3 different computers and I get the same results. Everything seems to be up until I try to enter the Frequency in the DVAPTool 1.04 screen, then I get an "invalid frequency 144.500" (I get the same response regardless of the frequency I enter).

I am running an Intel i7 PC using Windows 7 OS. I've copied what I'm seeing on the DVAPTool screen below. Note that the DVAPTool screen is indicating "Windows XP" as the O/S. I'm not sure why. I have tried to load the drivers as indicated in the Installation Guide, and also installed the Bonjour installer (which I didn't need to do on the initial install), but I get the same results.

Any suggestions on how to fix this problem would be greatly appreciated. Also does anyone know a tech support phone number to call about the DVAP?

Tnx in advance,

KF4HR

DVAPTool Screen text:

```
DVAPTool version 1.04
Restored parameters:
UserCallsign=KF4HR
DVDevice=
Frequency=
SquelchLevel=-80
TxPowerLevel=10

Frequencies are entered in Hz so try 144550000. Take a look at the instructions at www.dvapdongle.com. :)

Thanks Robin. That did it.

Just curious. Why is the DVAPTool screen indicating XP OS? I'm running Windows 7. It's working, so I assume it must not make any difference?

2366. Re: AA4PP: Gateway Unknown

Yahoo group: DVAPDongle
Date: 2013-04-11 18:28:18 UTC
From: Les
Topic: 2339 Message: 2366

I was having a problem with my DVAP connecting to my repeater gateway. I was running my DVAP on a Raspberry Pi. It turned out there was a problem with the Raspberry PI DNS and it could not resolve the IP address for my gateway.

I ran the update on the Raspberry Pi and installed DNSUTILS. Now the Raspberry Pi DNS can resolve the IP for my gateway and my DVAP can connect to the gateway with no problem.

Yes, I do it all the time - Mac to PC to Rpi - work, home and on the road, respectively.

Hi Mitch. There have been a number of folks that downgraded their firmware to an incompatible version. DO NOT DOWNGRADE FIRMWARE!! You may render your DVAP unusable.

What version of the firmware is currently on your DVAP?

For everyone, DO NOT DOWNGRADE FIRMWARE!!!!

From: Larry Seese
Topic: 2375 Message: 2380

Hi Larry,

Glad to hear of your success! I have been running my own DVAP with the standard 1.04 Tool and standard FTDI drivers on my 2011 MacBook Pro (OS10.6.8) with no issues -- easy to install and fun to play with!

But I just got a new iMac with Mountain Lion pre-installed (replaces a previous iMac that died in a huge lightning-induced power surge), and the talk I've been hearing is that 10.8 has issues. Haven't had a chance to test all this out on my new iMac yet (have not set it up quite yet) but I would be very interested in hearing more about what you did, such as:
1. which drivers did you install (v2.2.18 is the latest, as far I know), and
2. where did you get the Beta5 tool? How is this different from v1.04?

My bigger question is: I'm wondering why you would be successful when others have had problems...

Your Retina model MBP probably came with 10.8 installed, and at least one person that I know with a problem upgraded to 10.8. I'm just wildly guessing that upgrading a Mac that previously worked with the DVAP to 10.8 *maybe* requires the FTDI drivers to be removed and then re-installed to mesh better with the 64 bit 10.8. ??? I'm not experienced enough to know if this is even a possibility, and I'd welcome anybody's input...

Thanks and 73!

2383. D-STAR Training available at Dayton 2013

Yahoo group: DVAPDongle
Date: 2013-04-17 15:22:13 UTC
From: wb4qdx
Topic: 2383 Message: 2383

DSTARinfo.com and the Georgia D-STAR group will again conduct training for beginning and intermediate D-STAR users during Dayton Hamvention 2013. The three hour class will be held at the Drury Inn Ballroom, conveniently located in the Hamvention hotel area at 6616 Miller Lane. The class will begin promptly at 8:00am.

This training will provide the basics for new D-STAR users guiding them through the registration process, getting on the air and get the most out of handhelds or mobiles. More experienced users will benefit from topics including the DV Dongle, DV Access Point, making a hotspot with a Raspberry Pi, D-STAR nets, using D-STAR's high and low speed data features including the ID-1 radio, and where to find D-STAR resources to get the most out of D-STAR.

Class size is limited and pre-registration is required. The cost of the class is $15.00 and all attendees will receive all course materials. To register and pay class fee by PayPal, go to http://www.dstarinfo.com/d-star-infocon--dayton-hamvention-2013.aspx <http://www.dstarinfo.com/d-star-infocon--dayton-hamvention-2013.aspx> . For more info, email info@... <mailto:info@...> .

2387. ID-31A to be given away during Dayton D-STAR Class

Yahoo group: DVAPDongle
Date: 2013-04-22 01:24:46 UTC
From: John Davis
Topic: 2387 Message: 2387

If you've registered for the D-STAR training at the Drury Inn Ballroom in Dayton during Hamvention on Friday, May 17th, from 8:00am until 11:00am, you already have a chance to win an Icom ID-31A handheld radio to be given away during the class. There is still time to register for this comprehensive D-STAR class, but seats are filling up fast.

This training will provide the basics for new D-STAR users guiding them through the callsign registration process, getting on the air. easy programming of your D-STAR radio including the ID-31A and ID-51A radios, and get the most out of handhelds or mobiles. More experienced users will benefit from topics including the DV Dongle, DV Access Point, making a hotspot with a Raspberry Pi, D-STAR nets, using D-STAR's high and low speed data features including the ID-1 radio, and where to find D-STAR resources to get the most out of D-STAR.

Class size is limited and pre-registration is required. The cost of the class is $15.00 and all attendees will receive all course materials and a chance to win the Icom ID-31A. To register and pay class fee by PayPal, go to http://www.dstarinfo.com/d-star-infocon--dayton-hamvention-2013.aspx.

2390. DVAP & ID-51A transmit problem?

Yahoo group: DVAPDongle
Date: 2013-04-23 20:44:22 UTC
From: douglas_jackson@ymail.com
Topic: 2390 Message: 2390

I have DVAP, 70cm, [s/n AP700291] with ID-51A that have worked in the past, both on laptop & RPI.

I can ID, Ecko test, unlink & link, plus monitor REF001C & REF030C, but it appears that I can not transmit? I have a DV Dongle with the DVAP Dongle on the same laptop.

In the past I have logged with GPS on the DStar Info site, with no problems. Now I can hear conversation via the 51A & DVAP, but they can not hear me.

I have looked at the Calibration program, but this appears to be only for the VHF 144 DVAP?

Robin to you have any suggestions? Josh @ HRO only suggested I contact you.

Thanks, Doug KI4DVB

Hi Doug. Try changing the frequency in DVAPTool +/- 5/10 kHz to see if you are slightly off frequency (while keeping the radio frequency the original value).

Given that you are able to run the ID and echo test commands, it doesn't look like it is off frequency though. I see you transmit on your DV Dongle on REF030 but don't see any attempt to transmit with the DVAP. Does your radio have the same callsign as DVAPTool (with a space in the 8th character of mycall)?

2393. Just getting started

Yahoo group: DVAPDongle
Date: 2013-04-24 21:27:37 UTC
From: Richard K
Topic: 2393 Message: 2393

Hi,

Just a few basic questions ... I am running an ICOM-51a with RTSystems programming software and the 70cm DVAP. Everything is working great and I am able to RX / TX by connecting to a reflector.

First question is that, even though I've used the RT's D-Star calculator (it's AWESOME!!), I do get "gateway unknown" on many of the reflectors. Are they just sometimes up and down or is there likely a programming issue?

Second question is that I don't clearly understand the difference between connecting to a to a Reflector (like 30C) or to a Gateway or Repeater (like HRO). I understand what it means to connect to a reflector, but if I connect to a GATEWAY am I connecting to a single repeater location? When you want to have a connection to a specific repeater is that the purpose of a gateway?

Third question is, while I've successfully used the D-Star calculator to program the reflectors, do I also need to manually program the gateways or is what's in the ID-51a already usable somehow?

Fourth question is why would anyone own a D-Star radio and not have a DVAP? It is the coolest technology behind the coolest radio.

Thanks! Rusty KB4SHQ

2394. DVAP Serial Number Problem

Yahoo group: DVAPDongle
Date: 2013-04-24 13:31:22 UTC
From: stevef1903
Topic: 2394 Message: 2394

Hi - just getting into this technology and tried to up date new firmware
In the process I must have dumped the unit serial number
How do I reload the Red Dongle serial number
I am supposed to be using this device this weekend in a Ham Radio Youth Day event and I need to get it running real quick
Anything would be greatly appreciated.

Thank you
Stevekv4md

2395. problems with Version Firmwar dvapupdater 105

Yahoo group: DVAPDongle

Topic: 2395 Message: 2396

Hi Mike. Is there a reason you downgraded your firmware from 1.07 to 1.05? That will definitely break your DVAP.

I've posted here before that folks should NOT try updating their firmware unless told to do so.

Where did you get 1.05? I removed it from the dvapdongle.com web site over a month ago.

2397. Thoughts about using a tablet with the DVAP

Yahoo group: DVAPDongle
Date: 2013-04-25 14:24:00 UTC
From: andrewthall
Topic: 2397 Message: 2397

I know you're working on Android software for the DVAP. I have a Nexus 7 and would love to use it with the dongle. I was wondering about the drain on the tablet's battery. As I'm sure you know, most tablets only have one connection and require an OTG cable for connection to an external USB device.

Can you come up with some sort of configuration where an external power supply could be used to help power the dongle? Otherwise, could you give a reasonable estimate of operating time using the internal battery when starting with a full charge?

Andy, K2OO

2398. RaspberryPI Question

Yahoo group: DVAPDongle

From: NextGen_Users Creator
Topic: 2398 Message: 2398

Anyone know if the Raspberry Pi can be moved from Network to Network and connect appropriately? I would like to take the PI on the road with me when I travel and can share the Verizon installed in my laptop or hotspot my phone. So I would have three WiFi Networks configured.

Thanks for any suggestions / Direction

Brad W4INT

2399. Re: RaspberryPI Question

Yahoo group: DVAPDongle
Date: 2013-04-27 08:54:31 UTC
From: wkendrvr
Topic: 2398 Message: 2399

Yes. You will have to make sure you configure the other networks. I do this with an ATT hotspot and my home network.

There is an image that is floating around that has HALT and REBOOT as radio commands, and for the rare cases where it didn't seem to work I was able to remotely reboot the Pi and get everything working again.

Lots of good question, Rusty. Let me take a stab at them.

On your first question, are you connecting to reflectors through a DVAP or a local repeater? With few exceptions for rare outages, reflectors are up 24/7. If you are getting "Gateway Unknown" responses, either the local repeater is not syncing to update its IP addresses for reflectors or, if on a DVAP, you did not have a good Internet connection and when you started up, the DVAP did not get a good list.

Second question, a reflector connects multiple repeaters, Dongles, DVAP and hotspots together. If you're on a DVAP, you can connect to a reflector directly. If you are on a local repeater, you must link that repeater to a reflector. If you link to a repeater (gateway), you are on that repeater AND any other repeaters or reflectors that repeater may be linked to.

Third question, if you have an ID-51A, you don't need to manually program anything. The 51A has reflectors and repeaters programmed in the DR memories already. To access them, press and hold DR. You will see a TO line at the top and a FROM line at the bottom. Highlight the FROM line, press the Blue button and select either Repeater List or Nearest Repeater. Selecting Repeater List lets you select the region and drill down to a specific repeater. If your GPS is turned on, select Nearest Repeater and you will get a list of several repeaters with the closest one at the top of the list.

Back to DR, highlight the TO line and press the Blue botton. Select Your Callsign and scroll to a reflector you want to link to and press PTT. Next scroll to Use Repeater and select for talking (CQCQCQ).

For your fourth question, there isn't a question. I agree. The 51A is the best radio to date and a DVAP is a fantastic add-on. Have fun with D-STAR.

What makes it better than a 92AD John? I asked AES USA for a quote on one recently.

I know they have the SD card, and I hear there has been a microphone membrane cover replacement in design (or retrofit?), to improve the original audio quality.

Are they also submersible?

Thank you for the reply! This afternoon I was able to connect to the local repeater. Originally I had been told that there was not a limit to the number of links allowed to the repeater but then today I was told that there in fact is a limit and that is probably why I was not able to access this repeater. I also learned that this repeater reboots every midnight so I assume all existing links are dropped at the reboot. I guess I got lucky and got in today before the limit was reached. From what I have been able to learn (and I'm not sure that this is right...) there is a limit to the number of links to repeaters but no limit to links to reflectors. Thanks again!

From: Dave Wickert
Topic: 2393 Message: 2409

I do not have a 92AD, but I spent a lot of time with one from a friend evaluating which one to buy. For me, the decision came down to two things. First, I wanted a built-in GPS. That was a deal breaker for me. I also wanted a HT that I could share with my wife and the 51A is much more straightforward to operate for the occasional ham. There are lots of differences, see the specs, but once you bundle in the GPS and ease of use, the 51A is a much nicer option (my opinion). 1: SD card -- I just got mine from Best Buy -- no special version required. The one that I got from HRO did not include an SD card -- AES may be bundling one but the basic unit does not come with an SD card. 2: New microphone membrane -- yes, ICOM has been retrofitting for about a month now. It is easy to tell if yours has been done, just look towards the bottom of the unit where the speaker is -- do you see a white dot just to the right? If so, then it has been mod'ed. All of the new HTs in the pipeline have the mod already done on them. The mod also included upgrading the DSP software. Between the two changes, the 51A works like a champ now. 3: submersible? yup, just like the 92AD. 73. _-_-_ Dave, AE7TD

Hi Phil. I checked the logs and you are using a "C" in the 8th character of your callsign field (mycall). You have not, however, registerd a "C" as a terminal. Replace the "C" with a space and it will work.

From: Bob
Topic: 2416 Message: 2416

I have the red 2M DVAP and have used it for several months. I got a Raspberry Pi and hooked it to that earlier this week. What a fun tool! I am traveling on business this week and decided to take the DVAP with me and use it on my laptop instead of taking the Pi. When I hooked it up and ran DVAP Tool 1.04, it started out as usual but no DVAP was found. Same result on a netbook that I have with me. Uninstalled the DVAP software, removed all references in the registry and re-installed. Still not able to find the DVAP. I do have the pulsating green light, but that's as far as it goes.

Everything on the DVAP tool window is grayed out except the spaces for my call sign and entering the frequency. Searched the DVAP sight and can't find any diagnostic tools. Any suggestions?

Thanks!

Bob

2420. -device command line option a bit too strict?

Yahoo group: DVAPDongle
Date: 2013-05-08 16:40:11 UTC
From: Brian Smith
Topic: 2420 Message: 2420

Does the Linux version of DVAPTool only accept device names on the command line that match the pattern "/dev/ttyUSBxx"? If so, my submission for the wish list is to make it less strict.

I've tried the unique udev path to the DVAP device (/dev/serial/by-id/usb-blahblahblah), as well as an easier to remember symlink to it in my home directory, but DVAPTool rejects both of those. It's not a permissions problem.

The reason for this:
I'm trying to configure both the DVAP and a GPS receiver on the Linux netbook that I use for radio purposes. I already have gpsd configured to use a specific device and therefore ignore the DVAP, but the GPS receiver also uses an FTDI chip and DVAPTool will sometimes try to connect to it if both devices are connected at the same time when DVAPTool starts.

From: g1ypq
Topic: 2421 Message: 2421

Hello Group, I have just received my UHF DVAP Today and am looking for a suitable UHF frequency to operate it on just to be politically correct.
I will be looking at wiring it to an outdoor folded dipole so to maximise my local coverage. I am using it in conjunction with my Icom ID-51 E. very happy with the pair of them. So could anybody tell me what frequency options I have thank you in advance.

As soon as the Android version is released I'll be able to report whether or not the Nexus 7 dock works well with the DVAP attached to a OTG cable. The dock uses the POGO pins on the Nexus so you won't need to use the USB port for power. I'm really itching for the Android version to be offered.

Cheers,
Robert

Hi Brad?

I looked through the logs and did not see any attempts to connect with the name/auth server from your IP. If you provide your callsign, I'll look that up as well.

We had a recent issue where the user could not get UDP packets through their internet modem. Once they switched modems, it all worked. It sounds like you have tried two different connections so that may rule out the modem.

The next thing to check is your antivirus/firewall software. Turn it all off for a test.

Thanks for the reply Robin.

In my two testing scenarios I have also turned off the firewall completely when connecting to the shared connection via my laptop. The second conection (WiFi HotSpot) from phone there are no restrictions as to TCP/UDP traffic when connected.

2432. Re: [DVAPDongle] Re: UK DVAP UHF

Yahoo group: DVAPDongle
Date: 2013-05-10 14:16:45 UTC
From: George Jones
Topic: 2421 Message: 2432

Hi Karl,

There are a couple of issues you need to address when using a DVAP on an external antenna system.
1. The manufacture does not warranty the DVAP from damage caused by a surge resulting from a nearby lightening strike when using an outside antenna.
With that being said, use some type of surge suppression in the antenna line.
2. The transmitter power level is only 10-MW. Feed line loss soon becomes an issue. I have successfully mounted a DVAP in a weather proof box right at the base of
the antenna to minimize feed line loss. I then operate the DVAP over a USB to Ethernet adaptor. CAT 6 cable is run from the tower down into the radio room where it
converted back to USB and connected to a Raspberry Pi computer.
3. Intermod and RX overloading can be a problem due to minimal filtering built into the DVAP. A helical filter in the DVAP antenna line helps with this problem but does
introduce some insertion loss.
4. Operating temperature can vary widely in an outside mounted DVAP box. Use whatever scheme you can devise to keep the box internal temperature within the
DVAP specs.

I hope this helps with your project. Good luck.

Many thanks George,
Issues I had not initially thought about, the idea is to maximise coverage around the home and garden not particularly the whole neighbourhood, I do have power and Ethernet in the loft space, so indeed I should think about having the antenna indoors with short coax run. I have failed miserably with the raspberry pi but have a friend fully conversant that is going to configure it for me next week, I am very happy with my purchases and look forward to making new friends and chatting to the world.....have a great weekend George and thanks for your interesting information.
(I usually hang around reflector 5A)

Interesting, but even residential neighborhoods are variable. Structures change the radiation patterns by moving the hose or parking a car differently.

It is also possible that the original antenna is broken. The original antenna didn't last a week, so I use an HT antenna on the dvap.

Report back?

2442. DVAP with ID-51

Yahoo group: DVAPDongle
Date: 2013-05-12 20:00:32 UTC
From: g1ypq
Topic: 2442 Message: 2442

Hello Group I am struggling with the correct settings for my ID-51 working through my UHF DVAP. I can work through any of the reflectors in my reflector list but I am unable to connect via any repeaters, in fact i cant even access Gateway CQ in the TO field, just beeping when i try to access Gateway CQ. My access channel to the DVAP is set up in the SIMPLEX menu memory and I believe this is where my problem lies.

If I go to from and select near repeater and choose my local repeater,
I can then go to TO select Gateway CQ and choose any repeater.

I am now pulling my hair out....

If anyone could help me how to correctly program the ID-51 I would be extremely grateful,,.....Thank You

I think I have posted the instructions for using a DVAP earlier in this group so you may want to search for any messages. However, if you are using the factory load for the repeater list, it's very easy to use a DVAP. Press DV and hold for a second, select FROM and press the BLUE button. Select repeater list and scroll down until you see Simplex/DVAP near the bottom of the list. You should have some default DVAP frequencies set and you can select one if you are using one of those if your DVAP is set to one of those frequencies.

NOTE: If your DVAP uses another frequency, you will need to edit your Repeater List to include your DVAP frequency and save it in the Repeater List.

Press the left CS button to get back to the TO and FROM display. Select TO, press the BLUE button, select YOUR CALL SIGN and USE Repeater. Now you're set for to use the DVAP. To link tot a reflector, highlight the TO field, turn the knob to the reflector you want and key the mic. Once the reflector responds a linked, scroll back to Use Repeater.

Sounds kind of complicated to start, but once you have your DVAP frequency stored in the Repeater List, it's easy to use a DVAP with your 51A. Oh, don't forget to lower your power on the 51 when using the DVAP. I always set mine to SLO (100mW) because the DVAP is only transmitting 10 mW. That will prevent overloading the DVAP front end.

2444. Low Flutter On Transmit

Yahoo group: DVAPDongle
Date: 2013-05-13 17:10:07 UTC
From: n7jnd
Topic: 2444 Message: 2444

Greetings All,

After receiving my new DVAP last week, I notice there is a low frequency flutter on the transmitted signal from the DVAP. It's certainly not distracting, but is this normal with the DVAP? It's there on both my home computer and work computer.

Thanks & 73,

Chris - N7JND

From: aa4rc
Topic: 2444 Message: 2445

Hi Chris. When run in DSTAR mode, the DVAP is digital only so there is no analog channel to cause flutter. Do you hear the same when you use the radio to talk directly to a repeater?

73,
Robin

Yes I have added my DVAP frequency under my simplex channels.

NOTE: If your DVAP uses another frequency, you will need to edit your Repeater List to include your DVAP frequency and save it in the Repeater List.

Could you tell me the correct way to write my DVAP into the Repeater List Thankyou

Karl

i use a memory space for each command to the dvap. the simplex frequency will always be the same. the differences will be in the "ur call" space. There you will enter the reflector you want to connect to. It should look something like. ref010c---L. where the final space will either be L for link or U for unlink. you will also need a memory spot for the CQCQCQ command, still with the same simplex frequency. This will enable you to talk once you are connected. After you are linked to the reflector of your choice(which you programmed in) then you can flip over to the cq memory slot to talk. when done simply flip over to the unlink command memory. Hopefully you will find this helpful. Please let me know so i know that my posts are not just annoying to the group.

You can certainly do it as memory locations. That’s the way I used to do it on my 92AD. However, with the DR memories, if you store your DVAP frequency ONCE in the Repeater List, then you can use all of the Reflectors and link/unlink commands in the TO list to go where you want. That frees the memory locations for other stuff including the old analog repeaters. Hi Hi.

2452. ID-51 + DVAP

Yahoo group: DVAPDongle
Date: 2013-05-15 07:39:40 UTC
From: g1ypq
Topic: 2452 Message: 2452

Morning Gentlemen, I still cant configure my ID-51E to access the repeater list only the reflector list, I have tried to put my DVAP in the repeater list and the error message I get on the computer screen in The DOS style DVAP box is
Ignoring transmissions from radio not in simplex mode RPT1/RPT2 must be set to DIRECT

This is how I have programmed my memory channel for the DVAP

NAME Karl's DVAP
SUB NAME UK
RPT CALLSIGN G1YPQ B
GATEWAY CALLSIGN G1YPQ G
OP FREQ 438.6000000
DUP -DUP
Offset 0.000000
USE FROM YES

there must be someone out there that is using the ID-31/51 with the DVAP that can point me in the right direction.

Regards

Karl

Karl:
You are putting this in the regular memory, not the Repeater List. Which software are you using, if any? However, it will work if you program a memory as follows:

Frequency: You DVAP frequency
Name: Whatever you want
DUP: Simplex
Offset: doesn't matter
UR: CQCQCQ
RPT1: blank or Direct
RPT2: blank

I believe it's ports 20001 thru 20005 UDP. And since the DVAP software only connects outbound, no ports need to be forwarded.

I don't have one, but it seems to me that the radio should be in simplex mode, not duplex with an offset of zero. On other radios, when you do that, RPT1/RPT2 are automatically set to DIRECT or NOT*USE.

Dvap needs a host, like a raspberry pi, laptop or desktop, which will access the mifi with a wireless 802.11 connection.

I do not believe that it is possible to cancel that dialog box via a command line. However I have found that there is no problem leaving it hanging around. The DVAP works prefectly fine with the dialog box visible.

Hope that helps.

2482. New DVAP / Icom ID-51 User Could Use a Little Help

Yahoo group: DVAPDongle
Date: 2013-05-21 20:39:55 UTC
From: n1pqg
Topic: 2482 Message: 2482

Hello to the group.

I've successfully connected to my DVAP running v 1.04. I have the Icom set to the lowest power setting as suggested. I can connect to pretty much any of the reflectors (REF004B for example) and monitor traffic, but when I connect I get the audio 'remote system linked receive only'. And when I try to transmit, I get the audio message 'link currently established.' I don't seem to be able to transmit onto the network.

My callsign on the radio and on the DVAPTool are the same. I didn't use the 'A' in the 8th character place as suggested but not required as I have no idea what that's for. I believe my call is registered correctly in the system. As I said, I can connect and monitor. I just can't transmit into the network via the DVAP.

Lastly, I'm good with what a repeater does in the Dstar world, but I am not clear on what a reflector is, what a gateway is, how they differ, and how to use them. I'm not necessarily looking for the beginners guide to using Dstar, but if someone knows where I could find such a guide it would be much appreciated. To a newcomer such as myself it's awfully confusing.

Hello

For starters your dstar registration is not completed correctly

See this URL

https://wb1gof.dstargateway.org/cgi-bin/dstar-regcheck?callsign=n1pqg

You need to log back into that dstar registration and follow the directions such as these...

http://www.dstargateway.org/D-Star_Registration.html

If I can help you any further.you can email me off line

WA6JFK at arrl.net

N1PQG asked, among other things:

> Lastly, I'm good with what a repeater does in the Dstar world, but I am
> not clear on what a reflector is, what a gateway is, how they differ, and
> how to use them. I'm not necessarily looking for the beginners guide to
> using Dstar, but if someone knows where I could find such a guide it would
> be much appreciated. To a newcomer such as myself it's awfully confusing.

A reflector is similar to a repeater, but numerous stations can connect to
a reflector and whatever is said on one repeater is then reflected back to
all of the repeaters. You may think of it like a yahoogroups "mailing
list."

A gateway is the part of a digital repeater that allows your voice message
to be sent (over the Internet) to other repeaters and reflectors instead
of just to the one repeater that you are using.

Sorry, I don't have a link to a guide such as you requested.

2491. Dvaptool.exe system error running windows 8

Yahoo group: DVAPDongle
Date: 2013-05-22 19:53:28 UTC
From: n2isp
Topic: 2491 Message: 2491

here is the error I am getting Dvaptool.exe system error running windows 8

The program can't start because dnssd.dll is missing from your computer. try reinstalling the program to fix this problem.

Did it 2 time restarted the pc and still did not work. The green light is flashing on the dv dongle.

Please help

You are not registered for DSTAR

You need to find a dstar gateway and register your callsign.

Otherwise this won't work at all.

From: charlie_kc2ped
Topic: 2244 Message: 2500

I don't know if I did the right thing but I plugged my radio transmit frequency into the Center Frequency box and set Span Frequency to 2 MHz and it looks like it is working. At least it shows what I expect it should show, not that I know what I am doing.
On my setup there is a wide peak to the right of the center frequency but then after a second or two the trace becomes more symmetrical around the center frequency, but then the left side of the peak disappears and everything is from the central frequency to the right.

Hi Hugo,

If you go to this web site:
https://wb1gof.dstargateway.org/cgi-bin/dstar-regcheck?callsign=k7hje

it appears as if you may have registered with a space in front of your call sign. You will have to contact the system admin to correct it.

Hugo,

I read this, too. I had a late appointment yesterday and didn't get to call you back.

You forgot the detail that when you connect, you get the "receive only" message, which means that your call in MYCALL in your radio cannot be authenticated in the dstar system as the system receives it.

Please refer to:
http://www.dvapdongle.com/DV_Access_Point_Dongle/Using_the_DVAP.html

Set up a second terminal on the gateway - w4ab.org/Dstar.do - with an A in the field just below where you setup the one with the blank yesterday.
On your radio, delete your MYCALL entry and re-create it, taking care not to add any characters other than your callsign.

In DVTool, put an A in the 8th character in the Station Callsign field after your callsign, then check the lock callsign box as shown in the example.

If you do exactly these things, at this point, this will work. The problem you had yesterday is that you had not put the correct terminal entry into the W4AB gateway. That is now fixed.

There are hundreds, if not thousands of DVAPs that work. Be patient, you'll get this one working shortly.

I'll email the w4bug admin and make sure you're deleted there, although you don't show as registered at both - perhaps Ralph hasn't yet approved your registration.

You really do NOT have to put an A as a second terminal if you already have a terminal registered with just a space. The DVAPtool software will work just fine with your regular callsign and no additional letter.

Hugo,

I read this, too. I had a late appointment yesterday and didn't get to call you back.

You forgot the detail that when you connect, you get the "receive only" message, which means that your call in MYCALL in your radio cannot be authenticated in the dstar system as the system receives it.

Please refer to: http://www.dvapdongle.com/DV_Access_Point_Dongle/Using_the_DVAP.html

Set up a second terminal on the gateway - w4ab.org/Dstar.do<http://w4ab.org/Dstar.do> - with an A in the field just below where you setup the one with the blank yesterday.
On your radio, delete your MYCALL entry and re-create it, taking care not to add any characters other than your callsign.

In DVTool, put an A in the 8th character in the Station Callsign field after your callsign, then check the lock callsign box as shown in the example.

If you do exactly these things, at this point, this will work. The problem you had yesterday is that you had not put the correct terminal entry into the W4AB gateway. That is now fixed.

There are hundreds, if not thousands of DVAPs that work. Be patient, you'll get this one working shortly.

I'll email the w4bug admin and make sure you're deleted there, although you don't show as registered at both - perhaps Ralph hasn't yet approved your registration.

I just tried your callsign with DVAPTool remote via vnc on my Rpi at home & it worked fine.

Enter as KJ7HJE #####

#=space

No spaces before the callsign.

Adrian ... vk4tux

Adrian ... vk4tux

So ensure that there are no spces preceding your callsign

Basically I could not figure out why this wouldn't work as set up. I suspected that his MYCALL had an extraneous character in it, so, I went back to RTFM and to setup exactly as documented.

I don't have an A terminal setup for my DVAP either and it works fine, but this was one case where it just didn't make sense that it didn't work, so I took the "kitchen sink" approach - do everything exactly as the documentation suggests.

But I'm glad Hugo's working... Whatever fixed it is a mystery to me...

One of the benefits of mailing lists (such as this one) is for people to search for solutions to their problems, particularly if someone has had a similar problem and came to a satisfactory conclusion.

Hugo, would you be willing to post (in this same thread) the overview of the problem and the final solution? This could be of considerable benefit to future users.

2512. Wireless Raspberry Pi with Verizon iPhone 5's Hotspot

Yahoo group: DVAPDongle
Date: 2013-05-24 17:32:43 UTC
From: w6hvh
Topic: 2512 Message: 2512

I have a Raspberry Pi set up and working with Ed's (KB6THO)bootable image as supplied by Brian (WA6JFK). This works well through my ethernet wired network. However, I'm going on a short trip where I wanted to use my iPhone 5's wireless hotspot to make my connection to a local D-Star repeater. While there were many posts with solutions using a wireless dongle to the R Pi, I didn't want to change anything with the image.

The solution proved to be relatively simple once I received a hint from Gary (W6MAT) that most wireless users had an Edimax dongle plugged into the R Pi. I didn't use that dongle because of software changes I would have to make, but I did find an Edimax solution.

Besides the R Pi and 2M DVAP, I needed a power supply. As others have mentioned, the Powergen 12000 mAh unit on Amazon for around $30 was the solution for power.

Now what to do about connecting to the iPhone? The Edimax Broadband Wireless Router (a very tiny router, I might add), BR-6258n, available from Amazon for around $29 appeared to be the solution. I emailed the company's customer service people and asked if their little router would wirelessly connect with an iPhone 5 on Verizon's network. Not only did they say, "Yes," they gave me all of the information I required to make it happen. And, to make a long story short, the system works flawlessly. The key to getting the router to work is to ensure that the router's internal address matches what Verizon's hotspot wants (there's no reason to suspect that this wouldn't work on AT&T or Sprint, but I haven't tested that).

I will post a picture of the four pieces involved in case you want to try this for yourself. If you have any questions, either respond in the forum, or email me.

Dave,

The problem was I wasn't able to transmit using the 70cm DVAP. I was recieving and hearing everyone ok on the reflector (REF037C) W4AB Fort Lauderdale, but when I try to transmit the reflector would link but said a message " receive only " yet It show connected to the reflector.
The system op Mickey Baker was very helpful and spend alot of time with me over the phone thanks Mickey, but we still couldn't figure out the problem. I had 2 registrations on the Dstar data base unknowingly so I email the system op to that one to remove it and he did. I also remove the other register pc on the data base and re-imputed them per Mickeys instructions.

I then recall some here telling me to reboot my cable modern so that morning I did that and then it started working just find. I don't really know what the solution was but its working find now. I was very frustrated and ready to return the DVAP I'm glad I didn't. I been able to talk to people all over really cool.

It is a property of the radio -- not the DVAP. Sorry, I have 51A's -- I do not know the setting for the 880H.
However, I also run RT Systems' software and it is a setting on the radio configuration page.

Hmm. This is probably best discussed on the ID51 group, but this may be the Weather alert feature (WX). The Weather alert function jumps from DV to WX every couple of seconds to see if an alert has been issued. You have two options. You can disable WX entirely and just use one VFO, or you can setup WX on VFO B and use DV on VFO A (which is what I do). I do all of my FM work (and WX) on VFO B and all of my DV work on VFO A.

BTW: This is not just a 51/31 issue. It also happens on the 92AD (or so a person who has that radio told me -- I do not personally have one so I have not verified it myself).

Hope that helps.

2533. Installation on Google Chromebook running Chrubuntu 12.04

Yahoo group: DVAPDongle
Date: 2013-05-27 22:11:04 UTC
From: calvin_groups
Topic: 2533 Message: 2533

I am using an Acer C7 Chromebook that is running Chrubuntu 12.04. This is a version of Ubuntu 12.04 LTS configured for running on the Chromebook.

I cannot get this to find the DVAP. The green light on the DVAP is pulsing green. I extracted the DVAP folder (v. 1.04) to my Desktop. When I double click on the DVAPTool the user interface comes up but it says " No DV AP Dongle found! ". I can change the call sign and frequency. The DVAP Device is blank, with no options.

I then tried it on an old IBM Thinkpad T-22, from the W98 days. I am running Ubuntu 8.04. The install went smoothly. The DVAP works fine. The DVAP Device box shows "/dev/ttyUSB0 ". I had a successful QSO on the old T-22.

I returned to the Chromebook/Chrubuntu setup. I went into places and found I do not have a folder called /dev/ttyUSB0". I guess this is the starting place. FYI, I have had no problems using USB devices on this laptop.

Hopefully someone has solved this already. Thanks for your help.

Hello Don,

I let this posting slide since someone already offered to get you registered. I am surprised that as of today, 5/28/13, nothing has happened. What some hams do is call HRO in Atlanta, or AES in Orlando and get registered by phone (You think there is an incentive here?). You can also go directly to the D-Star registration pages for either store sponsored repeater/gateway and request it yourself and wait for approval and complete the process.
https://wb4hro.dstargateway.org/Dstar.do
https://w4aes.dstargateway.org/Dstar.do

Instructions for registration:
http://www.dstargateway.org/D-Star_Registration.html

Which ever of the multiple ways you want to do it (pick only one though), will work.

Best of wishes (73)

Hi Don
Just so you know Portland is not on the network currently
They have lost their access to the internet

And have not worked out a solution

I lived for most my life in Oregon
before going to out of state
Lived south of Portland and worked in Salem and Portland over the years

I wish there was more D-star repeaters
in the area and a better attitude by repeater associations
about D-star I have talked to several

and even pitched the non Icom
http://www.bay-net.org/ww6bay_dstar.html
type repeater system

Don Weber
Ka7qqv Alameda CA

ex board member Salem repeater association
and mt hood repeater before
ARRG acquired the machine

On the Raspberry Pi, I use the -open command line option to have it
start up and open, it is headless.
I added it to the end of one of the existing start up files.

DVAPTool -open

In windows you should be able to make a short cut for DVAPTool and add
the -open option in the target field under properties.

Windows version has command line options:
Usage: DVAPTool [-nolock] [-open] [-device DEVICENAME] [
-frequency MMMKKKHHH

2546. RE: [DVAPDongle] Re: Autostart

Yahoo group: DVAPDongle
Date: 2013-05-30 16:09:38 UTC
From: Dave Wickert
Topic: 2540 Message: 2546

On Windows, I set my account to auto login. I believe that this is needed because the dvaptool has dialog boxes that need an actual Windows user -- I was never able to successfully run it w/o having an interactive account. But there may be a magic Windows way to do that.

I added the following batch file to my account's startup folder:

```
cd c:\program files (x86)\dvaptool\
dvaptool.exe -nolock -open -frequency 441000000
```

Which autostarts the DVAP tool on the simplex frequency I use.

There is a popup dialog box that tells me that the device started OK and that I am running the latest version of the program. It is modal, i.e. waiting for me to click "OK", but it does not stop the DVAP from working. I just leave the modal dialog box up and running. There is no command line option for not having it appear.

Hope that helps.

2547. DVAPTool.exe starting up not finding DVAP

Yahoo group: DVAPDongle
Date: 2013-05-30 21:12:01 UTC
From: Robert, N4IJS
Topic: 2547 Message: 2547

Good afternoon,

I recently upgraded to the latest DVAPTool.exe so I could setup my system to auto-start the DVAP.

But, when I run DVAPTool (either through the command line with "-open" or from the desktop like normal), the GUI indicates that it can't find a DVAP device ("No DV AP Dongle Found!") while the console does show the device as being found. When I click "OK" on the GUI error dialog, it works fine (the DVAP is found without issues). However, without dismissing the error dialog, DVAPTool doesn't fully open.

I am running Windows 7 64-bit and tried to download the "DVAPToolTest.exe" (from a Google search I did for the problem), but the link doesn't appear to be valid.

Does anyone have a way to resolve this issue?

Thank you and 73,
Robert - N4IJS

Sleep is not a command that the Windows command program recognizes.
There is probably a program out there named sleep that does that, or it
was a command from a different version of DOS (back in the day).

I tested "timeout /T 20", and it counted down from 20. If you don't
want it to display anything but wait for 20s just use it like this:
"timeout /T 20 > nul" (type it in without the quotes).

Craig - AB8YA

2557. DVAPTool version 1.04

Yahoo group: DVAPDongle
Date: 2013-06-03 00:25:24 UTC
From: k7hje
Topic: 2557 Message: 2557

I have flashed my SD card as per your instructions. All of your instructions are fine until Line 4, where you call for "sudo tar xzPf DVAPTool-1.04-rpi.tgz". The reply from is :
"Gzip: stdin: unexpected end of file
Tar: child return status 1
Tar: error is not recoverable: exiting now"

Any help

2559. Re: DVAP and Data usage

Yahoo group: DVAPDongle
Date: 2013-06-03 09:56:53 UTC
From: w4brz
Topic: 2554 Message: 2559

I switched from an unlimited data plan to a 4 GB shared data plan and purchased a hotspot to go along with my iPhone, those are the only two items pulling data from the system. My last bill showed 557,580 KB's of usage. During that period I ran my Raspberry Pi connected to the hotspot and reflector with the radio on for three 12 hour periods and various times while mobile. I also had my home computer connected to it a couple of times to watch some short You Tube Videos. I do not normally watch videos or download music on my iPhone or hotspot.

This is by no means a precise study of usage, I started to do that and lost track after seeing how little it really did use.

I hope this helps and hope others provide more detailed information.

Verify that you downloaded the whole file when you did the sudo curl -O .... step.. If the file is around 4xxk, then it failed, if it is just under 1MB it was successful. I noticed it hadn't downloaded the whole file when I typoed the file name, redoing the command with the name corrected resolved the issue.

2565. RE: [DVAPDongle] Re: DVAP + ID-51

Yahoo group: DVAPDongle
Date: 2013-06-05 13:58:29 UTC
From: Dan Mattews
Topic: 2440 Message: 2565

This is not that complicated.

To link to a repeater you need to have the following:

You need the frequency that your DVAP is on setup as simplex and make sure its in DV mode.

Then for instance if I wanted to connect to the B port on K5TIT I would put the following in the CALLSIGN area.

K5TIT BL the L being in the 8th position.

Rpt-1 and Rpt-2 are left blank.

And then of course to have a conversation you need the memory with CQCQCQ in the CALLSIGN area.

I hope this helps.

WA6JFK

PS

RT Systems software makes setting up all of this stuff really easy to do.

The message is not protected by FEC so it often has garbage characters. It is interesting that the "T U D" is a fairly common occurance.

Take a look at:
http://www.dvapdongle.com/DV_Access_Point_Dongle/Using_the_DVAP.html
About 1/2 of the way down, in the section "Radio Command Reference", it talks about the settings for the various commands. They are a bit different from what you might expect.

Hope that helps.

Had this happen to me on a new Apple iMac..

Discovered the computer had an energy savings
mode and if I configured my iMac to never shutdown
or sleep that cured my problem with the DVAP.using an iMac

Still could have Display mode turn off via a set timer but
must the computer to never turn off,

Not sure if PC's are same as the i7 Apple iMac in their
System Preferences Folder.

Maybe that will help you.

Exact way to set in Apple iMac avoid DVAP shutdown outlined below:

In the Apple iMac under System Preferences --> Energy Saver
Can set Computer to never turn off , but can set display to go into
a Sleep mode.

DVAP will then work fine in the iMac operating system.

Not sure if Windows operating can do the same.

Mike

hello all

i have for sale on ebay my icom ic-92ad with lots of extras

you can view it here: http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=261229764329

or search ebay for item# 261229764329

I have for sale my used icom IC-92AD with extras, all in very nice condition, my reason for selling is that I recently acquired an icom 51a. all original boxes are included as with all manuals here is what you will get if you win the auction: icom IC-92ad with original: antenna (never used, i always use after market shorter antennas), power adaptor, battery, belt clip and hand strap. bp-257 AA battery case. rs-92 remote control software with cable. rt systems wcs92 version 4 programming software with cable. bc-177 desktop charging cradle with original power supply. nifty mini manual. shipping and handling is a flat rate of $25.00 because all this stuff is heavy. i will only accept paypal payments i will only accept shipment to a continental united states address no returns no refunds no warranties expressed or implied this is my personal account with ebay i am not a business i just simply sell what i have no need for any longer and one more thing... if the winning bidder is with "buy it now" or meets or exceeds the "buy it now" price of $550.00 i will include a used rigblaster pro. i'll state it again if the winning bid is via "buy it now" or meets or exceeds the "buy it now" price of $550.00 the rigblaster pro will be included. i'll state it a different way if the winning bid is less than the "buy it now" price of $550.00 the rigblaster pro will not be included. thank you for taking the time to view my auction 73 joe - ab8wl

From: Steve
Topic: 2582 Message: 2582

Hi All,
Having just been shown what can be done with D-Star I took the plunge. I got the adapter for my '9100 and the DVAP Dongle. As I went though the "Using the DV Access Point Dongle" instructions on the DVAP Dongle web page I skidded to a stop at the "Radio Command Reference" paragraph. It says "Enter the following values in the URCALL field on your radio:

"DVAP I" (request voice ID from the DVAP)

"DVAP E" (key down and speak for echo test)

"CQCQCQ " (transmit to a connected system)

"xxxxxxmL" (to link, replace XXXXXX with the gateway or
reflector callsign making sure to use 6
characters filling the end with spaces as needed.
Replace the "m" in the 7th character with the module
to which you wish to link. Use "L" in the 8th
character to indicate the Link command. For
example, to link to Reflector 001 module C, use
"REF001CL" in URCALL. To link to gateway W4DOC
module A, use "W4DOC AL" in URCALL)

" U" (unlink from a linked gateway/reflector. Make
sure the "U" is in the eighth position of URCALL)

Note that, other than "CQCQCQ ", the commands above are processed locally and not transmitted to a connected system.

^^^

2583. RE: [DVAPDongle] First Time DVAP user needs help...big time!

Yahoo group: DVAPDongle

From: Dave Wickert
Topic: 2582 Message: 2583

The way that I look at it is that the DVAP is a "mini-repeater". All of the items you have listed, e.g. "DVAP_ _ I", "DVAP _ _ E", "xxxxxxmL" are commands that you are sending simplex to the "mini-repeater" (DVAP) -- the "mini-repeater" then establishes the link for you. On a regular analog repeater you send tones to it for commands (e.g. establish a IRLP link, run a phone patch, etc.) But on DSTAR we use the URCALL for commands to repeaters; not tones. Once the link is up and URCALL is set to CQCQCQ (or "Use Repeater"), then your normal voice is routed to and from your linked target. Until the link is up -- your voice transmissions go in the bit bucket. A target can be a reflector or a repeater.

That is what helped me. Your mileage may vary.
Good luck!

Subject: [DVAPDongle] First Time DVAP user needs help...big time!

Hi All,

Having just been shown what can be done with D-Star I took the plunge. I got the adapter for my '9100 and the DVAP Dongle. As I went though the "Using the DV Access Point Dongle" instructions on the DVAP Dongle web page I skidded to a stop at the "Radio Command Reference" paragraph. It says "Enter the following values in the URCALL field on your radio:

"DVAP I" (request voice ID from the DVAP)

"DVAP E" (key down and speak for echo test)

"CQCQCQ " (transmit to a connected system)

"xxxxxxmL" (to link, replace XXXXXX with the gateway or

reflector callsign making sure to use 6

characters filling the end with spaces as needed.

Replace the "m" in the 7th character with the module

to which you wish to link. Use "L" in the 8th

character to indicate the Link command. For

example, to link to Reflector 001 module C, use

"REF001CL" in URCALL. To link to gateway W4DOC

module A, use "W4DOC AL" in URCALL)

" U" (unlink from a linked gateway/reflector. Make

sure the "U" is in the eighth position of URCALL)

Note that, other than "CQCQCQ ", the commands above are processed locally and not transmitted to a connected system.

^^^

Hi Steve,

Don't make it more difficult than necessary by thinking too nhard. There isn't really any magic here.

The different values in the URCall field are used to send commands to the DVAP from your radio and is similar to the commands use to cotrol a local repeater.

The DVAP E command says to echo what I transmit for testing - that is, play back what I say.

The DVAP I command asks the DVAP to report it's status info.

The link command tells the DVAP where to link into the network, either a local repeater gateway, or more properly, directly to one of the reflectors. (Since most repeaters have limited internet bandwidth it is generally not good form to link a DVAP to them)
I you look at the info for linking with DStar using a radip to a repeater I think it way the DVAP works will make more sense.

"CQCQCQ" means I want to talk to anyone listening on the repeater or reflector.

Note that commands in DStar via the four command fields cause all sorts of confusion because of the need to include blanks to pad most commands to 8 characters.

In the example you show linking W4DOC module A there is a (single) space between DOC and AL. That is, the AL command must be in positions 7 an 8.

Hope this helps a little

2585. DVAP - no voice being trasmitted

Yahoo group: DVAPDongle
Date: 2013-06-16 01:08:20 UTC
From: vk6jrtbob
Topic: 2585 Message: 2585

I recently purchased a dvap dongle for 2m. I purchased this item online. It was shipped to my home in Perth, Western Australia. I set the product up as described in the instructions but have yet to have a QSO.

I have an Icom IC-92AD and have programmed the radio as instructed. I am in DV Mode. When I key the microphone I seem to connect okay. My call sign appears in the script, I get a voice instruction saying that I am connected to the specified reflector but I appear not to be transmitting any voice. Data seems to be getting through because my callsign appears on the `last heard' pages.

I hear stations perfectly but seem unable to respond. When I transmit, the other stations don't seem to hear me.

I have tested my radio independently of the dvap and all works fine. I have also plugged the dvap into different USB ports. They are all USB 2.0 ports. I still appear not to be transmitting any voice to the relectors. Has anyone had similar difficulties?

I have tried everything I can think of to resolve the problem and am now out of ideas. Please, can anyone suggest anything that might solve my difficulties?

I have also emailed support at dvapdongle.com

2586. Re: [DVAPDongle] DVAP - no voice being trasmitted

From: George Muenster III
Topic: 2585 Message: 2586

Before transmitting, make sure you change channels on your radio from the linking command (in the UR callsign field) to CQCQCQ (in the UR callsign field). In others words (for sake of argument), my channel one has the UR callsign as: REF030CL then I go to channel two which has CQCQCQ in the UR callsign field.

Once connected to the reflector, are you then changing the UR field to
CQCQCQ ?

You situation sounds as if that is the missing piece.

Checking your callsign here, I noticed that you do not have the "Spacebar" entry in your terminal.

According to all dstar registration instructions that I have read, you must have that, or you will have all kinds of issues.

Also, since you have an A and a B terminal, is that what you were using in your setup?

In any case you should go back to your dstar registration and del line one and add the SPACEBAR in the box, callsign only terminal, then recreate your A and or B below that.

Make sure you are not trying to conduct a QSO on the memory you are using to connect on.You must have the. Same frequency you connected with,but not with the connect command.

I am very grateful for the support and suggestions received from Brian, William, George, Dan, Bill, David and Adrian. Sincerely hope I haven't left anyone out.

The problem is now solved, thanks to all of you gentlemen. And it was a registration problem.

I'd initially registered a single radio, intending to use it through d-star repeaters. When I couldn't hit any of our repeaters I decided to use a dvap and thought that my initial registration (minus suffixes) would suffice.

Many thanks for all your help. Hope to chat with you soon on d-star.

73,

Bob (VK6JRT)

If that was the case Bob, then you would not have been able to link as you had stated, however well done on working it out.

You dont need all the silly suffixes these days,
unless you are into callsign routing with different band radios on different repeater ports.

I assumed when you said you could link, you were using one of the terminal id's you registered,
with A or M suffix.

You never activated a space terminal without a suffix, but I see you have added it now on NE1DV.

Please don't make the mistake vk6sky did and register on vk6rwn etc as well as NE1DV.
as G2 processes/systems don't deal well with two ip range sets for the same op.

Adrian ... vk4tux

2596. DVAP and ID-51A....I can't make them work!!!!

Yahoo group: DVAPDongle
Date: 2013-06-27 02:06:27 UTC
From: clarkster1948
Topic: 2596 Message: 2596

I just received my new DVAP - 440 and ID-51A. I can't get them to work with each other.

I've registered, the DVAPTool is installed, I've configured it, and it appears to be working, but I cannot figure out how the memories in the ID-51A work with the DVAP. I am not close to any DSTAR repeaters so I have to use the DVAP to access the DSTAR network.

What I want to do first is figure out how to connect to reflectors through my DVAP.

When I enter DR mode, I can see that there are sections for TO and FROM

The TO section has the CCQCQ, Unlink, Status, Echo, and a lot of reflector link memories. I can also see how you can set the to select a destination repeater.

The FROM section also has a repeater list but none are close to me. In order to use the DVAP, I guess the FROM list needs to be modified to include my DVAP.

Assuming this is what I need to do, how do I do it? If not, what changes to I need to make to connect through my DVAP?

I also have RT Systems software. I haven't figured out how to use it yet but based on an hours goofing around with it, I can't figure out how to use it to let me connect to a reflector either.

Thanks for your help!

Clark

2603. Re: DVAP + ID-51

Yahoo group: DVAPDongle
Date: 2013-06-29 18:37:00 UTC
From: clarkster1948
Topic: 2440 Message: 2603

Here's what you do:

1. Put the cursor on To
2. Press the center button. A new menu will come up.
3. Select Your Call Sign
4. What will now be shown is the list of things in Your Call Sign Memory.

In the Icom ID-51 Programmer software, this memory is found in Digital -> Your Call Sign. It is a pain to edit it but it is possible to manually insert and remove rows in the table.

Unfortunately it's even worse in RT Systems software. You will find it in the Settings menu item....Settings -> Digital (D-Star) Settings, then in the list of what RT Systems calls U Memory. It is even worse there because you cannot even insert or delete rows. Also, you definitely cannot select a bunch of repeaters and reflectors and have it placed in U memory, which is what RT Systems should allow.

I talked to RT Systems technical support about this. They would rather you not use DR Mode at all. When I suggested it was a good mode that could save a lot of memories and hassle, the tech argued with me. When I suggested that all the new Icom radios will probably use this method of DSTAR programming, he got kinda pouty. Instead they want you to use memories to hold repeaters and reflectors, like older radios. Silly RT Systems! They seem a little sensitive about their software. HA! Even worse, they don't seem interested in listening to their customers.

From: la2qaa
Topic: 2604 Message: 2604

Hello Folks,
I've been trying (so far, unsuccessfully) to use slow data to connect to the WA6IRC data kiosk ... to use the D-Query system described at <http://ladstar.org/ls.htm>.

I've tried using the D-Query within D-Rats - with connections to WASIRCCL but continually get "gateway unknown"

I've also tried modules A and B.

I've tried a direct connection to the repeater with /WA6IRC but receive no reply at all.

According to D-Star Users 'Repeater' there *WAS* a station connected so apparently the system *IS* up and running again ... though is the data kiosk D-Query operational ?? ...

Can somebody please test the system at <http://ladstar.org/ls.htm> and tell me what I've misunderstood ... or ... what I'm doing wrong ...(if anything).

I'm using an IC-E91 to a DVAP connected to the internet with D-Rats software connected on COM1.

Please reply to list or to <La2qaa@gmail.com>

Much appreciated, thank you.

73 John. LA2QAA.

From: la2qaa
Topic: 2605 Message: 2605

Folks,
I forgot to say what I was inputting on my rig ...

URCALL = WA6IRCCL
RPT1 = LD3DV L
RPT2 = LD3DV G
MYCALL = LA2QAA/JOHN

Is this not correct ?? ...

73 John.

> MYCALL = LA2QAA/JOHN
>
> Is this not correct ?? ...

I am an expert on nothing, but shouldn't the RPT1 line end with an A, B, or C (1200, 440, 146)in the EIGHTH position? That is:

LD3DV space space A or B or C

And then in RPT2:

LD3DV space space G for global, as you have it.

Dave Schultheis
WB6KHP San Jose

2607. Therein lies the explanation ... possibly!.

Re Slow Data on WA6IRC.

I just had an e-mail from the SYSOP of WA6IRC regarding the data kiosk and my failed attempts to connect.

The Repeater is offline. Possibly a power failure according to the Sysop.

The D-Star Users repeater list I 'blagged' the 'active' callsign from must have been out of date the day before yesterday.

There's still !!! hope for La2qaa's single braincell yet ...

Hi Dave,
You're absolutely right ... it was a 'typo' on my part. It
should be a B... and it is, on the rig.

BTW ... congrats on the 4th of July.

Thanks for your response.

73 John. LA2QAA.

From: kf5wck
Topic: 2609 Message: 2609

I have an Acer Netbook running 64 bit Windows 7 Home Premium. Every time I try to install DVTools it tells me it is missing a .dil and I need to reinstall. I had no problem installing it on the MacBook. But I want it on the windows machine because it has built in 3g so I can take it portable. I have tried everything I can think of has anyone else had this problem and what is the solution?

Hi (didn't get your name).

I assume you mean DVAPTool, not DVTool which is used with the DV Dongle.

You probably need to follow the installation instructions, specifically step 9 at www.dvapdongle.com.

Thanks Robin,

I had not done that because it said "Apple" and I didn't think it was for windows. But that worked so now I have the DVAP on the ACER and off the Mac.

I had a similar problem. DVAP Tool installed and ran on my iMac, but on my Windows XP laptop it said it was missing a dll.

Turns out the dll in question is imbedded in an Apple printer program. Install the Apple print application on your Windows box and the DVAP Tool should work.

2616. Dropping audio

Yahoo group: DVAPDongle
Date: 2013-07-10 17:10:03 UTC
From: thwitherspoon
Topic: 2616 Message: 2616

Hi, Group,

I'm only one day into using my DVAP and ID-51A. I am loving D-Star already, thought he learning curve (for me, at least) feels a little stepp.

I have noticed that when I connect to my DVAP, every 3-4 seconds audio stops momentarily (the green LED RX lamp turns off on my ID-51A during that time) --it lasts only half a second or so. It continues to do this every 3-4 seconds while someone is keying down. Doesn't matter what reflector or repeater I am connected to.

The little signal meter (the one below the squelch) on the DVAP application shows between 2-3 bars when there is no audio. With audio (i.e. listening to a QSO) it drops to one bar. I've tried to troubleshoot by testing my internet speed (DSL: 3.0 down .4 up), my Win 7 PC also seems to be running fine. I've restarted my PC a few times, turned off all other applications and even tried changing USB ports.

On the DVAP tool, I have my power set to max and squelch in the middle.

Any idea what could be happening?

Cheers,
Thomas

2619. XVNC

Yahoo group: DVAPDongle
Date: 2013-07-11 13:36:20 UTC
From: w4brz
Topic: 2619 Message: 2619

I have been using my Dvap for months with no issues on my Raspberry Pi using Robins DVAPTool 1.04. I have it auto-booting and that has worked with no issues also. I originally set it up with TightVNC server, this did not allow me to access the console running the tool, so I have installed XVNC to allow me to access console 0. When I start all is working but when I try to VNC in the screen is black, unless I close down DVAPTools directly on the Pi. What am I missing?

2621. Amateur Radio Experimenters Corner - New Yahoo Group☐

Yahoo group: DVAPDongle
Date: 2013-07-15 12:07:50 UTC
From: KJ
Topic: 2621 Message: 2621

Amateur Radio Experimenters Corner
<http://groups.yahoo.com/group/Amateur_Radio_Experimenters_Corner/> The charter and purpose for this new yahoo group is to further and advance the exchange of information and cooperation among fellow members so as to best promote radio related experimentation, knowledge, sharing, cooperation and individual operating efficiency, which is intended to result in advancing general levels of interest and the overall welfare of Amateur Radio throughout the world and our universe at large. Interestingly and uniquely our group is actively involved with improving inter-operable communications between the various bands and modes of operation such as Analog: LSB,USB,SSB,AM,FM-w/n, etc..|Digital: P25, PSK, FSK, DMR MotoTRBO, NXDN, IRLP, EchoLink, AllStar, Codec-2, D-STAR® (IRCDDBGateway, HotSpots, Node Adapters, Dplus, DV Dongles, DVAP's, D-RATS, Digital Networks - ircDDB, G2 and their Reflectors ☐ XRF,DCS,CCS,REF), HSMM-MESH, etc..

```
Keep in mind that we are still busy working at assembling content by
adding useful links, files, photographs, etc... of which over time will
only become more improved and vast for your reference. Importantly it is
also worth noting that we now offer and maintain a geographically vast
and growing redundant fault tolerant network of linked and bridged radio
repeaters consisting of multiple modes of operation access and bands for
radio communication that you will find very convenient and handy when
gaining access via your own radio, thus allowing you to operate in your
own personal favorite mode of operation and at the same time still be
able to seamlessly inter-operate with the many other modes working on
our network.

2622. No Transmit Audio

Yahoo group: DVAPDongle
Date: 2013-07-19 22:18:08 UTC
From: Jeffrey
Topic: 2622 Message: 2622

I just installed a new 2 meter DVAP but I get no transmit audio. I registered on my gateway per the instructions but the gateway registration form only allows 7 characters so I had to put the A in the seventh slot.

How do you get it in the 8th slot?

I am my gateway administrator and approved the callsign in the database. I read other messages in the group and understand it takes a while for it to propogate systemwide.

Will it work in the seventh postion?

Thanks

Hi Jeff,

You are registered on K6MDD only. That is the way it should be. Do not register on another gateway. There is no need to. Any added suffix when registering is automatically put in the 8th position. If you are attempting to put the callsign - suffix in the 7th position of your dvap software mycall field, that is probably why you cannot transmit.

2631. ID-51A with DVAP -- can't talk with reflector!!

Yahoo group: DVAPDongle
Date: 2013-07-24 21:32:05 UTC
From: Bill
Topic: 2631 Message: 2631

Hi Everyone;

After three days of trying to get my DVAP to work with my ID-51A, some luck, but not enough luck.

Here's what the setup is:

ID-51A Radio set up by CS-51 Software
In Digital > Repeater List > Simplex, I have the following definition of the DVAP
Name: DVAP
Operating Frequency: 146.55000
DUP: Off
Use (FROM): Yes
Position: NONE
UTC Offset: -6
All other fields are blank

This has been transferred to the radio via the SDMicro card

On the Radio:

From: DVAP
The To: field has been selected under 'Your Call Sign' to 'REF004BL'
Key radio and connection is made to REF004B.
Reset To: field to either 'Local CQ' or 'Your Call Sign' > 'Use Repeater'
I can hear traffic on that reflector.
With either setting of the To field 'Local CQ' or 'Use Repeater' nobody hears me when I transmit.
I can unlink from the reflector as well.

The DVAP Tool screen shows:
Connected to REF004B
When I key down the screen shows:
MY: KE5XV /BILL
UR: CQCQCQ
R1: DIRECT
R2: DIRECT

I also have an IC-80AD which is configured in as a memory location as:
Operating frequency: 146.55
Name: DVAP CQ
Your: CQCQCQ
RPT1: <blank>
RPT2: <blank>

I have other memories set up for linking and unlinking repeaters (works), DVAP I, DVAP U, DVAP E, which all work.

The DVTOOL screen shows (on key down)
MY: KE5XV /BILL
UR: CQCQCQ
RPT1: DIRECT
RPT2: DIRECT

So, the DVTOOL screen shows the same information on key down for the ID-51A and the IC-80AD

I can't see a reason why this isn't working with the ID-51A.

One difference that may (or may not) be significant -- for the ID-51A to be able to communicate with the DVAP the 'Lock Callsign' box must be unchecked. Not so for the IC-80AD.

Can anyone figure this out?

Thanks & 73's

Bill, KE5XV

2634. Re: ID-51A with DVAP -- can't talk with reflector!!

Bill,

Check your configuration of the memory location you have set up for normal communication through your DVAP - make sure your 8th location has the L in it, otherwise DVAP doesn't know you want it to link your transmission to the Internet (if I remember correctly).

2635. DVAP on OS 10.8: cannot connect to a reflector

Yahoo group: DVAPDongle
Date: 2013-07-25 21:54:37 UTC
From: thwitherspoon
Topic: 2635 Message: 2635

Hi, Group,

I recently installed my DVAP on a MacBook Air running Mac OS 10.8. At first, the DVAP tool ran well, but did not accept commands from my ID-51. I found that closing the DVAP device port, then re-opening it, made everything work. Each time I launch the tool, I open the device port, close it, then re-open. I've been using it for several days this way.

Today, I'm traveling and brought the MacBook Air and DVAP along. I connected to wi-fi and everything worked well for about an hour. Then I noticed a long period of silence on the reflector. When I checked, the DVAP tool had dropped the reflector.

I've tried opening/closing the device, changing USB ports, starting/restarting, etc. but I keep getting the same results. Locally, the DVAP is working (i.e. echo tests, sending an unlink command), but it will not connect to a reflector.

Any ideas what might be the problem?

Cheers,
Thomas

From: thwitherspoon
Topic: 2635 Message: 2636

To add to this:

It looks like the DVAP is connecting to the reflector, but I can only listen to the traffic. It doesn't complete a full link. If I send an unlink command, it states that it's not currently linked. Indeed, when I ask it to link to a new reflector, it does not confirm, but will let me hear the reflector traffic again.

I have now tried it on another Mac OS 10.8 laptop and my father-in-law's Mac OS10.7 laptop. I get the same results. Very strange. I'm away from my PC right now, but have never had a problem on Win 7.

Cheers,
Thomas

Hi Thomas. I looked through the logs and saw your connections yesterday to the name server but never saw a connection attempt to a reflector or gateway. To which reflector did you attempt a connection?

Try connecting to REF030 and let me know. I'll look through the logs there.

Note that the DVAP is just the RF/modem piece of the solution. The DVAPTool software does all of the D-Star connection and communication with remote systems. If you have a connection that drops, it is usually the internet connection through your ISP that is having issues.

Also, if your Mac is set to go to sleep, that will cause you to disconnect as well.

73,
Robin

From: thwitherspoon
Topic: 2635 Message: 2638

Hi, Robin,

Thanks for your response.

I just tried connecting to Ref 30C. I can hear traffic and others connecting to the reflector, but no one can hear my call. When I key down to link to the reflector, the DVAP tool shows:

MY: K4SWL /
UR: REF030CL
R1: Direct
R2: Direct

I get no audio feedback that I've linked (though, I hear reflector traffic). When I unlink, it states that it's not currently linked. DVAP Echo tests work fine locally.

Cheers,
Thomas

in the UR: field once you're connected replace "REF030cl" with CQCQCQ

Then you will be all set

From: thwitherspoon
Topic: 2635 Message: 2641

Hi, John and Adfrian,

Thanks so much--I should have better clarified.

I do replace the UR field with CQCQCQ once I've linked the reflector, but no one can hear me because it actually hasn't fully linked to the reflector. I can only hear traffic, not transmit. When I then send the unlink command, the system replies that I'm not currently linked. Most of the time, even after sending the unlink command, I'll still hear the last used reflector's traffic.

I've been operating the DVAP quite successfully on my Win 7 PC--indeed, it's worked flawlessly--it's just on Mac OS X that I've been having problems. I hope to resolve this mainly because I travel with my MacBook Air. The PC is a tower and stays at the QTH.

I'm sure there's an answer out there somewhere.

Again, thanks so much for the replies.

Thomas

Hi Thomas. I looked through the logs on REF030 and I see you keyed up and your audio was forwarded to all connected systems:

```
Remote Dongle tx start (K4SWL ) streamid bdb7 2013/07/22 15:04:01.718
rpt2 (REF030 C) rpt1 (K4SWL ) urcall (CQCQCQ ) mycall (K4SWL /DVAP)
user message (THOMAS ASHEVILLENC ) mycall (K4SWL ) streamid bdb7
Remote Dongle tx end (K4SWL ) streamid bdb7:ef43 cnt 14 2013/07/22 15:04:01.971
```

Was this on your Windows box?

73,
Robin

Hi, All,

Just as means of follow-up, I'm back at the QTH and have the PC running with the DVAP tool. Everything is working perfectly again.

So, at least I know that the problem is with Mac OSX 10.7 & 10.8 on my AirBook and two different Powerbooks. I'll keep trying to solve the problem on my own. Perhaps if a USB driver update is issued for 10.8, that might do the trick?

Thanks for all of your help!
Cheers,
Thomas

I just got a new DVAP today. It is running great on my Macbook Air with 10.8.4

I also set it up with an old windows laptop and it worked fine, but I missed the ability to carry the little MBA around with me.

Hope you can get yours working. I am on my first day with D-Star and loving it.

73, Dave N3CI

2649. Another DVAP/ID-51a can't get it to work

Yahoo group: DVAPDongle
Date: 2013-08-10 01:01:20 UTC
From: qiproject
Topic: 2649 Message: 2649

The DVAP appears to be working in terms of accepting input from the ID-51a.
I am registered on Dstar.

I have the DR set "from" with the "DVAP" on simplex on the correct frequency and it is keying the DVTOOL software.
I set the "TO" to link with a reflector and get a reflector linked message of "receive only".
I don't hear anything.
I go back and try to select "Gateway CQ" and it will not let me select it. I can go back into "your call sign" and select "use repeater"
I try to transmit and get back a message saying I am linked. Still haven't heard a thing.

Is there a setting I am missing or do I have a bad DVAP or a bad ID-51a?

Sounds like the DVAP software may be hung up. Try sending a unlink command to it and resend the linkup command to whatever reflector you are using. Picking the "use repeater" is the right option. Of course the usual stuff. make sure volumn is up also make sure you haven't accidently turned on some type of call sign encode or something on the 51.

Thanks for the reply.
I tried swapping computers, re-installing everything, de-registering and re-registering and still didn't work. Then I turn it on and all of a sudden it started working. Very odd, as I don't know exactly what I did to make it work - but fine now.

If the Callsign lock has to be unchecked, that means it thinks it is a different call. Make sure the callsign config is correct. I switch between my 880 and the id51 all the time and the lock is checked.

Good luck,
Loren,NJ3D

2664. RE: [DVAPDongle] DVAP/Echolink

Yahoo group: DVAPDongle
Date: 2013-08-14 02:33:36 UTC
From: k1lva@...
Topic: 2655 Message: 2664

The DVAP doesn't use the sound card. All of the audio processing of the DVAP takes place inside the DVAP. My PC only has one sound card, and both Echolink and the DVAP run with no interference to each other. I've been running them this way for about two or three years now.

Actually, I have found that "Use Repeater" is required. Give that a try first before you try programming memories.

If the Callsign lock has to be unchecked, that means it thinks it is a different call. Make sure the callsign config is correct. I switch between my 880 and the id51 all the time and the lock is checked.

Good luck,

Loren,NJ3D

Hi(didn't state your name).

It sounds like you are not downloading the complete file. If you run:

"ls -l DVAPTool-1.04-rpi.tgz"

it should look something like:

-rw-r--r-- 1 robin wheel 996741 Feb 15 2013 DVAPTool-1.04-rpi.tgz

If you run:

"md5sum DVAPTool-1.04-rpi.tgz"

it should look like:

9525ecc3513e946d7888d63e4ad5eb8c DVAPTool-1.04-rpi.tgz

It's a long shot, but when you transferred the file from the server, were you careful to FTP it using the "binary" or "image" transfer method, versus ASCII? This is one common cause of file corruption in situations like this. It's easy to do (and easy to fix).

You can tell if Robin's MD5 command shown above gives you a different result.

Good luck! 73,
Dave KZ1O

2682. No Audio From Dongle

Yahoo group: DVAPDongle
Date: 2013-08-24 16:57:25 UTC
From: Neil
Topic: 2682 Message: 2682

This is weird. I can connect to the Dongle on my 31A as always. But if I link or unlink or do anything it works as I can see on the screen. But on the 31A I no longer get any audio from the Dongle at all. I did change a settings file on the 31A but have returned to the old one even factory resetting the 31A. I notice that on my Tool I see that I no longer have two or three red dots of squelch level. Just 1. But when I turn the squelch down it doesn't help either. I do see, when the Dongle transmits the file I can't hear that the bar fills with red dots. I am at my wit's end.... Any ideas???

Hi Neil. Try changing the frequency in DVAPTool up/down by 5/10 kHz while keeping your radio at the original frequency. It sounds like you are a bit off frequency.

Topic: 2682 Message: 2685

Hi Robin -- Nope, no luck with that either. Yet it does seem off frequency because if I look at the tool and see the audio coming up on the squelch bar and I manually unsquelch the 31A I can hear a terribly distorted and partial announcement. But I can't seem to find a "sweet" spot. I fired up my usually dormant 2820 also and it does exactly the same thing. So, it's the dongle. Any other ideas? Should I send this one to you to look at? Thanks.

Robin --
Ignore earlier reply. I realized I was looking at a decimal point wrong and by properly subtracting 5KHz from the frequency it DID work! However happy as I am to be using it again I am wondering if there is any way I can make it so that I only again have to enter the "real" frequency as intended and as is far less confusing?

Robin, I was reading over the MFI forms and happened to see your note while pursuing something else here. The contracts are pretty standard and should not need real lawyer involvement. There is a royalty but low enough most people build it into the cost. Also if you could figure out a way for the dongle or DVAP to communicate via Bluetooth with the IOS Device no MFI would be needed as no physical connection. Just a thought.

2689. Re: No Audio From Dongle

Yahoo group: DVAPDongle
Date: 2013-08-25 19:33:39 UTC
From: aa4rc
Topic: 2682 Message: 2689

Hi Neil. If you download the DVAP Util program from the downloads page at www.dvapdongle.com, you can use the spectrum display to center the frequency using the calibration field in the lower left corner.

If you'd prefer, you can always send the unit back to me for calibration.

We had a number of folks that ran the early version of DVAPNode which wiped out the calibration data in the DVAP. Those had to come back for re-calibration.

73,
Robin

> > >
> > > This is weird. I can connect to the Dongle on my 31A as always. But if I link or unlink or do anything it works as I can see on the screen. But on the 31A I no longer get any audio from the Dongle at all. I did change a settings file on the 31A but have returned to the old one even factory resetting the 31A. I notice that on my Tool I see that I no longer have two or three red dots of squelch level. Just 1. But when I turn the squelch down it doesn't help either. I do see, when the Dongle transmits the file I can't hear that the bar fills with red dots. I am at my wit's end.... Any ideas???

2692. Re: Raspbian (Wheezy) DVAP Tool installation script

Yahoo group: DVAPDongle
Date: 2013-08-26 13:45:27 UTC
From: gsownsby
Topic: 2629 Message: 2692

Hello Brian,
I did a fresh install of Wheezy (after a full reformat of my SD card) and installed the script you announced for auto starting the DVAP software.
So far the actual use of my Icom 91AD with the R*Pi/DVAP is working but I noticed one thing...it may or may not be related to the script or may be something completely different. Even though my TX message is in place, selected, and turned on. It does not display on our repeaters dashboard (remote user / last heard) but it is successfully linked and I can talk to others.
Ordinarily I use the DVAP with my Windows 8 PC without this happening. So could there be anything affecting the message with the script and/or the Linux version of DVAP? I'm scratching my head over this oddity.
Thank you.
Gary, AK4ZXChattanooga, TN

Logging is provided to /var/log/dvaptool.log. I'm working on a companion script that enables command functionality, e.g. reboot, shutdown, etc.

Topic: 2697 Message: 2697

My Pi crashed so I purchased another SD card and it boots up just fine. Loaded the operating system and its ok. However, when I am trying to load the DVAP 1.04 software, i get the error message of "tar old option". there an easier way to do this? Very frustrated. Thanks N1toq

2698. DVAP Dongle w/DVAPTool 1.04 and the ID51a -- Programming DR memory Issue

Yahoo group: DVAPDongle
Date: 2013-09-01 15:53:15 UTC
From: <lutherp40@...>
Topic: 2698 Message: 2698

"Ignoring transmission from radio not in simplex mode. RPT1/RPT2 must be set to DIRECT"

Has anyone had any success programmng a DR memory in an Icom ID51A to work sucessfully with a DVAP controlled by DVAPTool v1.04?

I can get the ID51A to work with the DVAP 'any day of the week' using normal memories, but this consumes 10 to 50 memories just to manage a single DVAP. This is much too expensive on resources to use normal memories. There are other issues with doing it this way however I digress.

This is my 'current' DR settings:
Name: DVAP
Sub Name: Florida
Call Sign: KB4LHP
GW Call Sign: KB4LHP
Group: 05 DVAP
Use (From): Yes
Frequency: 435.500.00
Dup: DUP+
Offset Freq: 0.000.00
Position: Exact
Latitude: 28xxzzN
Longitude: 081xxzzW
UTC Offset: -5:00

For Callsigns, I've tried almost every combination of My callsign, "DVAP ", "blank ", "DIRECT ", 8 spaces, that I can think of but no joy with any of them.

If either the Call sign or GW Call Sign are blank, the ID51 decides that it is not a valid DR record and refuses to show it to you in the radio.

I have not been able to find the magic combination that lets the ID51 be happy with a DVAP DR record at the same time as the DVAPTool is happy with the incoming RF data.

Unless I am told differently, I believe that DVAPTool v1.04 is being overly restrictive as to what constitues a valid and acceptable incoming simplex transmission.

New Local RF Stream:
hdr f 40:00:00 r2 KB4LHP r1 KB4LHP ur CQCQCQ my KB4LHP P /ID51 fc 48d4 OK
Ignoring transmission from radio not in simplex mode. RPT1/RPT2 must be set to DIRECT
Dropping Extra voice/packets

Thank you & 73

2699. RE: ID-51A with DVAP -- can't talk with reflector!!

Yahoo group: DVAPDongle
Date: 2013-09-01 16:04:53 UTC
From: <lutherp40@...>
Topic: 2631 Message: 2699

I am having the same problem getting my DVAP to work with a ID51 DR memory.

I am guessing that the ID51 is expecting the DR memory to be filled a "real" full featured repeater and DVAPTool is not having any of that nonsense.

I'm not happy about it, but it would appear that currently DVAPTool and the ID51 are not compatible with each other in DR mode at this time. :(

Hopefully it is something I am mis-configuring and not a real incompatibility issue.

From: <lutherp40@...>
Topic: 2698 Message: 2701

How do you mark this thread answered/solved?

Finally figured it out with some assistance from Robert KD0MVB. Thank you Robert.

Turns out the problem was with the Duplex field in the DR memory of the ID51a and maybe/maybe not with the callsign fields.

DUP needs to be "OFF", I am not sure if it matters about either callsign field of the DR memory. Mine are currently blank.

This is my current DR settings for my DVAP:

Name: DVAP
Sub Name: Florida
Call Sign: <blank>
GW Call Sign: <blank>
Group: 05 DVAP
Use (From): Yes
Frequency: 435.500.00
Dup: OFF
Offset Freq: 0.000.00
Position: Exact
Latitude: 28xxzzN
Longitude: 081xxzzW
UTC Offset: -5:00

This lets me find it as a GPS "Near Repeater" and access and just it just like any other repeater you might have listed in your repeater list.

All I can say is "Sweet!!!" :)

YMMV. Good luck and 73

I figured out my problem.

Yours is that you need to use "Use Repeater" (CQCQCQ) Local CQCQCQ doesn't get passed out of the DVAP nor ANY gateway for that matter.

As best I can tell Local CQ is for simplex operations only. (radio-to-radio direct).

Good luck & 73

2703. Can't link through new DSL connection

Yahoo group: DVAPDongle
Date: 2013-09-02 23:05:34 UTC
From: code2key
Topic: 2703 Message: 2703

My DVAP is connected to a Windows XP laptop. When I am at home with the laptop connected to my cable modem all works as it should. When I'm away from home and my laptop is connected to the internet through my Verizon MiFi 2200, it all works as it should.

Today, at a temporary QTH, I started internet service through a DSL connection from Fairpoint, the local telephone provider. My internet connection seems normal. I can open web pages, etc.

But when I open DVAP Tool and attempt to link to a repeater or reflector, nothing happens. If I disconnect from my DSL router and connect to the MiFi hotspot, it works. Why am I not able to connect through the DSL router?

hi paul

port 20001 udp is being blocked by your dsl modem. you will have to turn
off the firewall on the dsl modem. you may also
have to port foward port 20001 udp to the address that is being by your
laptop when using that connection.

once you do that all should be good with dvap tool.

It is possible that your DSL service provider block an amount of ports and let your Internet traffic going thru a some sort of proxy to filter all the Internet traffic.

It is a common "bad habit" from providers to unfortunately block the misuse or some kind of applications.

You should contact your provider technical support and do some test with them.

hello,

Its possible as above the ports have been blocked on that ISP and as such you could try to contact them and ask them to open it, but its not likley.

A technical solution would be to create a IP tunnel between your laptop and say your home PC and proxy the connection out.

This may seem technical if you have not seen it before but can be done very easily and once set up can be run in a few clicks.

If you are interested to learn more ping me direct I'll give you some instructions.

Thanks and good luck

Another way to ensure you always get a connection out is to use an internet tunnel / proxy.

you basically redirect the port via a ssh connection to another PC who has port access.

Sounds complex at first if you have not done it, but its an additional 2 clicks once its set up.

Ping me direct if you want to try it out, I have a server in the US and in the UK we can test on.

The modem/router is a Wavetell 7500.

Thank you to everyone that responded. I've got it working now, though I'm not sure how. I didn't figure out how to get into the settings to adjust what ports were being used, but apparently on one of my system re-boots caused some sort of reassignments. It just started working.

Topic: 2710 Message: 2712

Hi -

FTD2XX.DLL is part of the driver package for the FTDI USB transceiver, which is the component the DVAP uses to "talk to" DVAPtool. You need to install the entire FTDI driver, which is mentioned on the DVAP webpage here:

http://www.dvapdongle.com/DV_Access_Point_Dongle/Installation.html

Paragraph 2 has a link to the correct package. Download it, "un-zip" it and then run it. DVAPtool should then find the DVAP and all should be well.

I've stated here that you SHOULD NOT attempt a firmware update unless told to do so. The firmware was removed from the official site some time ago. Obviously, you got firmware from somewhere else and took it upon yourself to upgrade.

Sometimes you get what you deserve.

Perhaps if you had also read the instructions that came with the unit, you would know that you can send email to support@.... That is how you contact the manufacturer (or post here).

Depends on what you mean by "link talk". If they do not have the gateway in their RPT2 position (which is not required for them to talk locally on the repeater), then no, you will not hear them.

Likewise, if the repeater is linked to a reflector, and they do not have the gateway programmed in RPT2, they will not be heard on the reflector. But perhaps they desire to only be heard on local RF.

Yes, it's normal. The DVAP is connecting to the repeater through the gateway using the DPlus protocol, and this requires users to have the repeater gateway set in their radios to be heard over the network. If they don't, the gateway software and DPlus won't see the traffic.

THERE IS NO UPDATE! If you should find one, DO NOT TRY TO UPLOAD IT, as it will do just what you discovered – kill your DVAP.

2721. DVAPTool devs

Yahoo group: DVAPDongle
Date: 2013-09-07 01:35:59 UTC
From: <lutherp40@...>
Topic: 2721 Message: 2721

Anyone know how to make the "I" command tell you which reflector the DVAP it is currently connected to?

Sending the information commands to the DVAP is currently not very helpful. It only returns the default dvap-ID.tool audio file.

What would it take to make it return its call sign and reflector it is currently connected to or not connected to?

Thank you/73

Luther

From: <lutherp40@...>
Topic: 2717 Message: 2722

Yes, that is normal.

Local means just that "Local" only.

If someone sets "Local CQ" then their transmissions only exit the RF repeater and are not forwarded out of the Repeater's Gateway port.

Since you are connected to the repeater via the Gateway, they can hear you, but you cannot hear them.

I most always use "Use gateway CQCQCQ". That way I can bore a lot more people with my ramblings of nonsensical tidbits of useless knowledge. Not unlike what you are reading right here. :)

Have you looked at the message in your display after you send the I command? It doesn’t tell you in voice, it’s shows up as a message.

Try Unplugging everything. Leave is set for a few minutes then Plug the DVAP into the PI. plug the SD card into the PI. and all your other connections then power up the PI. Make sure you left it unplug for a few minutes. make sure to check your network config for the internet.

From: Ken
Topic: 2727 Message: 2735

Hello,

It is not common practice to connect directly to repeaters.. generally those gateways are linked to a reflector. Even so, the repeater may not have access to the internet, or chooses not to allow dvaps/dongles to connect to it..

Hope this helps

Ken

"xxxxxxmL" (to link, replace XXXXXX with the gateway or

reflector callsign making sure to use 6

characters filling the end with spaces as needed.

Replace the "m" in the 7th character with the module

to which you wish to link. Use "L" in the 8th

character to indicate the Link command. For

example, to link to Reflector 001 module C, use

"REF001CL" in URCALL. To link to gateway W4DOC

module A, use "W4DOC AL" in URCALL)

2740. RE: [DVAPDongle] Help

Yahoo group: DVAPDongle
Date: 2013-09-17 13:01:32 UTC
From: Tim Hardy AF1G
Topic: 2727 Message: 2740

Gateway unknown usually means either your DVAP isn't seeing the "directory" of known repeaters and Gateways or the repeater to which you are trying to connect isn't a Gateway, i.e., not connected to the Internet.

The only time I have ever seen "Gateway Unknown" is if I start my DVAP and my internet connection isn't there and my DVAP can't see the Gateways because of an internet problem.

The same will be true for DV Dongles.

Tim, AF1G

---- Ken <kc2idb@...> wrote:

Hello,

It is not common practice to connect directly to repeaters.. generally those gateways are linked to a reflector. Even so, the repeater may not have access to the internet, or chooses not to allow dvaps/dongles to connect to it..

Hope this helps

Ken

1. Connect from another computer using an SSH client.
2. Install VNC server on the Pi a VNC client on the other computer.

The image I use on my pi allows me to issue the commands from my radio. I have REBOOT and HALT programmed into a memory channel. When I want to shut down or HALT the system I dial to that memory and push the PTT. The same goes for REBOOT.

2748. Pi using wifi dongle

Yahoo group: DVAPDongle

From: <wgreenleaf@...>
Topic: 2748 Message: 2748

Hi, I'm using a raspberry pi with a wifi dongle, works great have it set up to either use my wifi at home or my mobile hot spot. the config for this /wpa_supplicant.conf has shown me how to set up a wifi connection which is wpa-psk, but how can i set on up that is an open wifi connection with no password:

```
network={
ssid="SSID 1?
scan_ssid=1
proto=RSN
key_mgmt=WPA-PSK
pairwise=CCMP TKIP
group=CCMP TKIP
psk="The encryption Key for this network goes here"
}
```

any suggestions would be appreciated.

Aloha
Wayne

2750. Dvap on Mac not linking

Yahoo group: DVAPDongle
Date: 2013-10-04 20:41:40 UTC
From: <mike@...>
Topic: 2750 Message: 2750

Ok everyone my apols but I can't find the answer anywhere.

I have a dvap on a mac, latest drivers and software. Dvap starts up ok. I have an ic2820 on the other side. I have all the recommended commands programmed into the rig.
When I ptt on the rig I get a cqcqcq go out and the dvap responds ok. I then get a msg back saying not linked. No matter what I do I always get not linked come up.
Dvap serial number is shown properly etc.

Anyone got any useful help to provide will be very welcome.

Thanks, Mike.

From: <lutherp40@...>
Topic: 2750 Message: 2751

Mike,

The link command goes where the CQCQCQ line is now.

It is only used once to tell the DVAP where to connect. You could tell it to connect to a repeater or a reflector, your choice.

For example in my ID51 I use the existing list in in there I have an entry that says "Link to Reflector 1C and that command is REF001CL. This is temporarily substituting the "Use Repeater" CQCQCQ command with a 'link to...' command. You need to switch back to "Use Repeater" CQCQCQ to actually use the link you just created.

It is slightly counterintuitive, but the To line is always the instructions as to what you want the system to do during the next transmission.

Ok everyone my apols but I can't find the answer anywhere.

I have a dvap on a mac, latest drivers and software. Dvap starts up ok. I have an ic2820 on the other side. I have all the recommended commands programmed into the rig.
When I ptt on the rig I get a cqcqcq go out and the dvap responds ok. I then get a msg back saying not linked. No matter what I do I always get not linked come up.
Dvap serial number is shown properly etc.

Anyone got any useful help to provide will be very welcome.

Thanks, Mike.

2757. New to DSTAR...Need info, DVAP & Rasberry pie setup

Yahoo group: DVAPDongle
Date: 2013-10-11 16:59:41 UTC
From: donsykes1@bellsouth.net
Topic: 2757 Message: 2757

I am able to use my dstar 880h radio using a dvap with out a problem. Now I have my feet wet I'm trying to use my 91AD with a Rasberry PI & a dvap. I burned the IMG file to the SD card and I load up OK but it just doesn't seem to let me link to a reflector. I hear the reflector beep but my radio wont link....I'm sure there is a problem somewhere in my setup, but I have it setup like the info I've downloaded of Hams who have it running. I thought if it wasn't with the image setup maybe it's with the 91AD, but it does link up using dvap tools with a PC and a dvap

I may not be asking the right questions, but is there anybody out there who can get me on the right track???

Really have a problem and pulling out what hair I have left....

Attachments: 5 described; binary payloads are missing from this source WARC

make sure you set either a - or + repeater shift with an Offset of 0.000 on your simplex frequency. Also make sure your RPT1 is yourcall B for 440 or yourcall C for 2 meter and rpt2 is set for yourcall G

then in YOURCALL should have the REF030CL to link to Ref 30 C or whatever reflector you're on. Always have the L at the end for Linking. Ex:

YourCall: REF030CL

RPT1: NK8J C

RPT1: NK8J G

My Call: NK8J

2761. RE: Trouble loading DVAPTool

Yahoo group: DVAPDongle
Date: 2013-10-15 12:54:13 UTC
From: <davidwoodnutt@...>
Topic: 2710 Message: 2761

I had the same problem loading the DVAP tool into XP. After some difficulty and several goes at uninstalling the Tool and re installing, I managed to get the new FTDI drivers loaded but I have an old driver or file lurking somewhere that is giving the following problem:

I open the Tool and get both screens up but the DVAP wont open.

I close the Tool and am left with the black Command Prompt screen that will not close, it will only minimize. The last entry states"Killtimers cannot be stopped from another thread" It also prevents the laptop from shutting down when I exit XP.

Once I have the first unusable version of the Tool open I can open a second version of it and it works perfectly, shutting down correctly after use.

Does anyone know what files I might have left over from my first installs so I can delete them and get rid of the unwanted Command Prompt screen?

Dave G0RAU

---In dvapdongle@yahoogroups.com, <amsctalx@...> wrote:

Hi -

FTD2XX.DLL is part of the driver package for the FTDI USB transceiver, which is the component the DVAP uses to "talk to" DVAPtool. You need to install the entire FTDI driver, which is mentioned on the DVAP webpage here:

http://www.dvapdongle.com/DV_Access_Point_Dongle/Installation.html

Paragraph 2 has a link to the correct package. Download it, "un-zip" it and then run it. DVAPtool should then find the DVAP and all should be well.

Subject: [DVAPDongle] Trouble loading DVAPTool

Robin... et al

I have an HP G62 laptop and have tried numerous times to load DVAPTool on it...

Problem is... each time I try to load the program, it seems to download ok, but when I try to open it, the black background DVAPTool window opens w/ nothing in it and a pop-up window opens, stating "The ordinal 80 could not be located in the dynamic link library FTD2XX.dll"

I have then reloaded the FTD2XX.dll many times and nothing changes.

I'm an "ole foggie" and self taught on computers... so not the sharpest tack in the drawer... so what the heck is an "ordinal 80"? and does anyone have any suggestions for me to try to get the program to open properly?

73.....

To add another network, simply append it to the existing file, as shown below.

```
network={
ssid="SSID 1?
scan_ssid=1
proto=RSN
key_mgmt=WPA-PSK
pairwise=CCMP TKIP
group=CCMP TKIP
psk="The encryption Key for this network goes here"
}

network={
ssid="" <== double quotes, no space
key_mgmt=NONO
auth_alg=OPEN
}
```

Guess my last message didn`t show up :). Anyway, i too had a problem downloading (and even getting to the dvapdongle website, tried tonight while trying to set up my DVAP on my new desktop and all i got was a 404 NOT FOUND error. Is the site gone for good? Sure hope not, mabey an alternate safe link to download the software from? N9NRA P.S. Is DAVAPtools availible in the files section of this group? That would be a good workaround for now till we find out what happened to the website.

Same problem here. Found the missing .dll and slotted it into the program files but now it reports "missing ordinal79". Beginning to wish I had never updated for the few benefits that8.1gives.

Can anyone advise what ordinal 79 is and how to restore it? Help much appreciated.

If the server IP has changed, your own DNS may be pointing to the wrong place. Windows machines, go to a command prompt enabled as administrator and type ipconfig /flushdns then see if it works for you.

You probably won't have this problem with a non-windows box.

I did an in-place upgrade to my Surface Pro.
When I plug in the DVAP and bring up the tools, it says it can't find the DVAP, I click the 'ok' button on the warning, then click the open button on the tools and everything works.

2786. RE: [DVAPDongle] New DVAP

Yahoo group: DVAPDongle
Date: 2013-10-22 04:23:40 UTC
From: Dave Wickert
Topic: 166 Message: 2786

Lots more folks on the group are much better than DSTAR than I am, so I cannot comment on all possible issues but several things are immediately obvious.

Take a look here:
http://www.ladstar.org/dvap.htm (down to the section titled "DVAP USE")
You will see that the commands to a DVAP are slightly different than a DSTAR repeater.
The echo test and status commands have the characters "DVAP" in the first four places instead of spaces.

In my RT Systems programming profile, since Simplex is selected, RPT1 and RPT2 are not used and should be blank.

On the DVAP Tool, make sure that your call sign is exactly how you registered it with DSTAR (any trailing terminal characters)??

Lastly, your frequency is wrong for DVAP Tool. I needs to be in Hz, so it would be 446 500 000 (five zeros -- you have four below). The frequency is in 10Hz in RT Systems, but DVAP Tool program is in Hz.

Hope that helps.

Here is an example of a Pi using wifi that searches for 3 available networks. The networks searched, in order of priority are: iPhone Personal Hotspot (priority 100), home/closed network wifi (priority 95), and last an open wifi (no priority given).

```
= = = wpa_supplicant.conf = = =
network={
ssid="iPhone_ssid_name"
psk="yourpasswordhere"
proto=RSN
key_mgmt=WPA-PSK
pairwise=CCMP
auth_alg-OPEN
priority=100
}

network={
ssid="wifi_router_ssid"
psk="yourpasswordhere"
proto=RSN
key_mgmt=WPA-PSK
pairwise=CCMP
auth_alg-OPEN
priority=95
}

network={
ssid="" <== double quotes, no space
key_mgmt=NONE
auth_alg-OPEN
}
= = = end of file = = =
```

Topic: 2789 Message: 2789

Just wondering if anyone else is noticing this, when i open my DVAPtools software on Windows 7 the following happens, after mabey 10 to 15 seconds the software does open, but i get "no DVAP found", tried seeing if i needed (mabey missing drivers?) to update the driver software, no luck there, the thingy is, if i click on the message and dismiss it, all is well and it runs, this happens every time i open the software (version 1.04), looked at a number of possible things but no answer so far, that`s why i`m asking here. Thoughts? P.S. Even looked at the DVAPdongle site to see if there were any drivers for the unit, but nothing there. Meantime might try another clean reinstall, just to see what happens...can`t hurt. Attachments: 5 described; binary payloads are missing from this source WARC

If you build one like Ray N9JA did Randy with a 15,000 mah battery pack to provide power. He got 3 days off his with no problem. The Pi will provide the power for the DVAP and a wireless network adapter.

http://www.ianker.com/product/79AN15K-BA here is the link for the info on it.

I am planning on a battery operated Pi hotspot.

How much 5V USB current does the DVAP draw?

2791. IC-51 DVAP and RT Systems Programming Software

Yahoo group: DVAPDongle
Date: 2013-10-24 22:21:06 UTC
From: <markg2000@...>
Topic: 2791 Message: 2791

Has anyone had success using the RT Systems Programming Software with the IC-51 for DVAP use? Any tricks, tips, template files, etc. would be most appreciated.

I have successfully installed the DV Access Port in a Windows 7 system. The LED indicates that my transmissions are received. However, I cannot hear any programmed repeaters or reflectors and the echo channel does not replay any transmission.

Thanks, I have a 10,000 MA battery, so it will be long enough for me.

I did fine that the Pi draws around 400 mA, and the DVAP about 85 mA.

Thanks for your update phone number.

From: <dkwolfe@...>
Topic: 2791 Message: 2796

I use the RT Systems software on my 880H and 92AD and the templates are built into the applications. The applications also provide a DSTAR tool that automatically populates the channels based on its access to the DSTAR database. Easy to use.

From: <dkwolfe@...>
Topic: 2797 Message: 2797

My DVAP worked correctly on my Desk Top MAC PRO running 10.8.5, however after upgrading to the new MAC OS 10.9, I could link ok and transmit via CQCQCQ for a few transmissions, but it froze and the DVAP would not respond to additional transmissions. Required that I quit and restart the DVAP, but same problem.

I tested the same DVAP on my MAC laptop that I did not update the OS from 10.8.5, and it works fine.

Tried reinstalling the DVAP SW on my MAC PRO, but same problem.

Any one else have similar issues?

I have something different going on. Ever since upgrading to 10.9 my DVAP detects a signal but will not recognise MY or UR or any data being sent.

Very strange behaviour. Haven't tested with windows yet as I develop extreme allergy with MS products.

Something must have changed with 10.9

I have had an issue on my mac book pro with Mavericks. My research has revealed that my issue is with he screensaver. Once the screensaver is activated the DVAP no longer functions. The work around for me thus far successful, is when using the DVAP disable the screensaver and the DVAP continues to function normally.

I would be interested in your findings as well.

Thanks,

2801. Re: [DVAPDongle] DVAP Problems Since Upgrading to MAC OS 10.9

Yahoo group: DVAPDongle
Date: 2013-10-26 16:22:08 UTC
From: Darrell Smith
Topic: 2797 Message: 2801

Hi David,

Yes, I had exactly the same problem. I have a “Late 2009” iMac that was running the latest version of Mountain Lion / 10.8.x with a 70cm DVAP using version 1.0.4 of the DVAPTool software and the latest version of the FTDI driver (2.2.18.) It had been running for several months with no issue. After I updated it to Mavericks / 10.9.0 I started getting similar DVAP symptoms as you describe. The DVAPTool could see and open the DVAP, I could link to a reflector and receive transmissions, but after a few minutes the DVAPTool would appear to loose communications with the DVAP. The DVAP would revert back to its “unopened” state with the green LED, and the DVAPTool would appear to be hung in that the information it was displaying wasn't being updated. Sometimes closing and opening the DVAP would unjam things, other times required restarting the DVAPTool.

It didn’t look like there was an updated version of either the FTDI driver or the DVAPTool software, so I ended up configuring my Raspberry Pi to control the DVAP and get the Mac out of the picture. It was something I was planning on doing anyway, the Mavericks upgrade just forced the issue. It isn’t clear if this problem is something inherent with Mavericks and the FTDI driver and/or the DVAPTools software, or more related to the upgrade process. It would be interesting to know if the DVAP works on a new Mac with a clean Mavericks install.

For now I would say that anyone running a DVAP on a Mac should think twice before updating to Mavericks, unless you happen to have a Raspberry Pi handy…

Oddly, configuring the Screen Saver to NEVER seems to keep the driver open, so it just might work. Will try it over longer QSOs just to make sure.

As Hams we're naturally curious about soft/hardware updates□we could be more careful next time {;-)

It doesn’t seem to be linked to the screen saver, just time. If you run the DVAPTool from the command line, you see "Ascp device stopped” when the DVAP stops working. If I was going to guess, I’d guess an issue with the ftdi drivers and Mavericks’ hyperfocus on power conservation/battery life and it shutting down things it thinks aren’t really in use. Reinstalling the FTDI drivers didn’t help, so I’m assuming we’ll need to wait for FTDI to release a driver update. Would love to be wrong and have Robin be able to push a fix quicker. :)

An extract of what I’m seeing:

```
Callsign set to (N2KGO)
Opening DVAP device /dev/cu.usbserial-A6007EQ5
Opened device /dev/cu.usbserial-A6007EQ5

From: Dennis Griffin
Topic: 2797 Message: 2810

Further to this, I found that in the Privacy tab of the Accessibility area of the Security & Privacy System Pref, DVTools was asking for permission to control the computer, so I granted that. No change - still one quick blue flash when opening the device, then back to slow pulsing green.

I just upgraded my macbook pro retina to 10.9 and have been running DVAPTool for an hour without issues. This is really going to byte if Apple did another "break older models" trick with the new O/S.

I did some testing on Mavericks. It seems that there is a bug where the O/S does a screen sleep (not a screen saver) and it glitches the USB bus. This should not happen.

I was able to keep DVAPTool running by going into the energy saver settings and set both the computer and the display sleep values to never. That seems like the workaround for now.

I had a problem with timeouts using a data-acquisition app in OS 10.9. The solution to that problem was related to a new feature called “app nap” introduced in Mavericks. If you right-click on the DVAP icon and choose “Get Info,” sou will see, under the “general” tab in the Info pane, a check box labeled “Prevent App Nap.” If you check this box, it may help with time-out related issues.

Thank you, Robin. My workaround was to revert back to 10.8.5, largely because of the inability to use DVAPTool or DVTool. If & when I decide to go back to Mavericks, I will try your workaround, if Apple hasn't fixed the issue. Have you notified them of this "bug"? Should all we DVAPTool users do so?

I've tried this and it still kills the connection but thanks for looking out for it. I think it is just likely to be a driver issue and no 10.9 update yet and will be fixed once the developer gets hit by the wave of emails complaining.

2820. RE: IC-51 DVAP and RT Systems Programming Software

Yahoo group: DVAPDongle
Date: 2013-10-30 22:58:19 UTC
From: <dkwolfe@...>
Topic: 2791 Message: 2820

Are you first linking to the repeater/reflector with the DVAP? It is a three step process and each has a separate channel in your radio.

1) In the URCALL field enter "xxxxxxmL" (to link, replace XXXXXX with the gateway or reflector callsign making sure to use 6 characters filling the end with spaces as needed.)

You should then get an announcement that you are linked.

2) Then you need to switch to CQCQ: In the URCALL field enter"CQCQCQ " (transmit to a connected system). Then you can start transmitting.

3) To unlink from the repeater/reflector In the URCALL field enter: " U" (unlink from a linked gateway/reflector. Make sure the “U” is in the eighth position of URCALL)

You should then get an announcement that you are unlinked.

This all presumes that the repeater/reflector accepts DVAP or Dongle transmissions. Some don't.

From: vanattabrad
Topic: 2821 Message: 2821

Here is the fix - very simple:

Right click on your DVAPTool.app - not an alias or shortcut - the actual app. Choose Get Info then check the box "Prevent App Nap" which a new item with OS 10.9. Close Get info box - problem solved!!

OS 10.9 or Mavericks has a feature built in to extend battery life that puts apps to sleep that it thinks are not currently being used. By turning off that feature for the DVAPTool - no more nap time - problem solved.

Yahoo group: DVAPDongle
Date: 2013-11-02 16:02:47 UTC
From: <markg2000@...>
Topic: 2825 Message: 2825

When first connecting to a reflector there is a line in my DVAP screen that says "login ok, transmit not permitted". Then I hear the message "Remote system linked, receive only."

Assume the following:
Gateway registration is correct: KD8VOW A
MY Callsign in radio is correct: KD8VOW A

The reflectors are being directly programmed from RT Systems programming software for the ID-51 (I have checked the DVAP option in the programming software).

What else could be causing the system to deny transmit privileges?

Should have placed it in the applications folder when you installed it, if not may be on your desktop. If you can't find it reinstall, and move DVTool.app to applications folder.

From: Don Woodward
Topic: 2825 Message: 2829

I believe on registration page – put “A” in initial on line 2 and give it a unique pc name – wait until it propagates – then try to transmit.

To: DVAPDongle@yahoogroups.com
Subject: [DVAPDongle] ID-51 DVAP Message: Login ok, transmit not permitted

When first connecting to a reflector there is a line in my DVAP screen that says "login ok, transmit not permitted". Then I hear the message "Remote system linked, receive only."

Assume the following:

Gateway registration is correct: KD8VOW A

MY Callsign in radio is correct: KD8VOW A

The reflectors are being directly programmed from RT Systems programming software for the ID-51 (I have checked the DVAP option in the programming software).

What else could be causing the system to deny transmit privileges?

No virus found in this message.

I had this same issue. Just register your call sign with a space, and in the DVAPTool use your callsign with a space. Should be good from there.

From: david Korchin
Topic: 2797 Message: 2831

Agreed□GET INFO on the app, check the PREVENT APP NAP checkbox, and it seems to keep the connection open. Prior, the DVAP would be open for only a couple of minutes, then close the connection; but I just made a QSO on 10C and am sandbagging for the past 30 minutes; seems to do the trick.

You have registered only the main callsign with the space, but then you are using the callsign with A designator; from the admin page you should enable also the additional terminal for the A suffix and then after the registration is propagated it should work on all gateways.

2835. Yet Another login ok Tx not permitted

Yahoo group: DVAPDongle
Date: 2013-11-03 20:35:11 UTC
From: <davidgames60@...>
Topic: 2835 Message: 2835

Having checked my registration progress I am now registered for D-Star, I now face what seems a familiar problem other users have experienced. Login is restricted to receive only.

A suitable time has passed for my call to be propagated, and having looked at the progress on the pc I can see the program generates 2 spaces after the callsign, but the registration is just my basic callsign.

I am using a ID-51E on Windows XP with the Dvap dongle and have experimented changing the call in the program and radio without any success.

Any suggestions ?

Thanks for the reply, tried a few different things last night would only receive.

Switched on to have another look this morning, same settings nothing changed.....worked perfectly.

Over 48 hours had elapsed since registration. Another D-Star mystery !

Works very well with dongle, had quite a few qso's

2847. Raspberry Pi and Edimax 7811Un

Yahoo group: DVAPDongle
Date: 2013-11-11 00:04:32 UTC
From: kc4cgy@bellsouth.net
Topic: 2847 Message: 2847

Hi all,

I am using the Raspberry Pi and the Edimax 7811Un Wifi adapter. I am also using the file created by KB6THO and WA6JFK, which boots up the pi and wifi adapter and once set up it's plug-n-play. The problem I am seeing though is after time the Edimax will go into power saver mode and then looses the wifi connection with my internet router. To look at the pi everything seems normal, except the Edimax little blue light is completely out. The only way I can get things working again is to reboot the Pi and restart everything and it will work for a period of time until the same thing happens again....

Can anyone tell me if there is a way to fix this problem so once the Edimax has connected to my wifi, it will stay connected until I turn it off or stop it.

Thanks,

Hi Joe,

Sorry it took so long for me to get back here. I don't have notices activated on this group. Any way I use a file written by KB6THO. If you send a email to wa6jfk@... he will send you back a link to the file. Then you just download it and burn it to a 16gb SD card, then set it up. All the instructions are included in the file you will download.

Hope this helps.

David 2E0DCE

I have had this happen here and the dvap was never defective. a small amount of condensation on the back of the dvap from temperature change and high humidity will cause this.
Removal of the two external and two internal screws, removal of the pcb, with a gentle pad-down with dry tissue and a bit of a blow,
had mine back to normal in no time.

I have two dvaps here including the first one in VK. s/n AP000067

The reliability is incredibly good.

Yes you can use a Cross band radio to repeat it but why? Make your DVAP portable with a little raspberry Pi computer and a few other Items. Here check this out and make it work easier for you not harder.

Monty,

I think it'll work if you plug in a DVAP first. I have used my DVAP on my iMac Intel running 10.6 & my XYL's MacBook running 10.6. No problems with either computer. The software is DVAP Tool 1.04.

I have had some troubles with my MacBook that has Mavericks 10.9. I suggest you do not take the upgrade to Mavericks if you want to use the computer for d-star.

I think the solution is to right click on the DVAP app, then get info, and check the box to disable AppNap.

My DVAP goes brain dead if left to itself and not actively used every 15 or twenty minutes. I think it has to do with Mavericks shutting down unused applications. Evidently the DVAP tool doesn't know its been shut down, and or knows how to restore state. Sometimes just closing/opening and relinking seems to work, more often than not you have to quit the app restart it link and you are good to go until it goes brain dead again.

Robin, perhaps you can set a timed interrupt that will be keep the app from being put to sleep and swapped out. I am not sure this is the problem but seems to be a likely candidate. In my case I run on a desktop MAC so I am not worried about battery life. Those with MacBooks might have different thoughts.

Topic: 2877 Message: 2878

Think of the DVAP as its own repeater -- a repeater just for you.
You can use the UR Call link command for reflectors, e.g. REF030CL (reflector 30C) or to repeaters such as to Reno (W7TA) or Abilene (KC5OLO), e.g. W7TA<sp><sp>BL (440 module) or KC5OLOCL (2M module) on your HT.

Linking via UR Call must be of the form:

<repeater><spaces-to-fill-up-6-characters><module>L <-- (the L is link)

However you cannot cause Reno or Abilene to link to anything. For that, you have to make a direct connection to that repeater.

If you are close to the Repeater in Reno, NV then select the FROM Filed then Press CS then Repeater List. Select the Repeater in Reno press enter. Then go to the TO: Field Press CS Again. Select GATEWAY CQ then go thru and select the other repeater that you want. That will allow you to link them up. Make sure to change back to CQCQCQ when you link them. If you are trying to Link the 2 thru your DVAP it will not work that way.

I sent an empty reply – dunno.

The correct name is “Direct Input (UR)”

Another reply from a VK had a good idea – enter the repeaters you want in the “Your Call Sign” menu list. It comes with reflectors pre-programmed, and you can add entries by tapping the “Quick” menu option. I learned something! (Be sure to include the band code in the 7th position and “L” in the eighth)

Hi Monty,
thank you for your help. I received my guide to D-star book the other day and this has now become clear to me. I was trying to take advantage of the "gateway cq" memories pre programed in the ID-51A. I now understand that is not possible using dplus. However as with learning any new mode, I received my appropriate amount of frustration getting it to work. And that is a good teacher. There is no substitute for experience.

Thanks for the help, Dan

To connect to a repeater on Simplex using the DVAP. You must edit the YOUR CALLSIGN list and add in the Callsign of that repeater. Ex:

KS1R CL The L is for Link has to be in the 8th character place. Since you are close to that repeater you do not need the DVAP. You Can use a radio with cross band repeat to allow you greater distance. Just make sure your Crossband repeater mode is in FM only.

I understand all of that and that’s why here in the USA a lot of us use 145.100 to 145.990 because of it.

Brad NK8J

There is some confusion of terms here. There is no simplex connection between the dvap and the gateway/repeater. The connection is via internet port 20001 UDP dplus link with DVAPTool and has nothing to do with RF.

Simplex is the format of RF connection between the dvap and the HT/Txcr set to either simplex, or duplex with nil offset such to include its RPT 1/2 headers, either with no tx/rx frequency shift.

The question regarded an RF frequency to be set synchronous on the HT/Txcr and the dvap software to match that is FCC or otherwise particular to local regulation approved, fitting the bandplan, tuning step and an unused area of same
band.
So as you would look for a simplex frequency in a low use area of the band, you would select same for this purpose.

Hi Wayne, I also am unable to connect directly to any D-STAR as the nearest repeater is 40 + miles away and I can not hit it from my QTH. I was led to believe that if I used a DV Dongle or a DVAP, I could easily connect to any repeaters. Well it turns out that not all repeaters will allow a direct connection from DV Dongles or DVAP. However you can connect to reflectors. After listening to a D-STAR presentation at my radio club and learning that a new D-STAR repeater would be installed within a mile of my QTH, I decided that I would give D-STAR a try. Within a week, I saw a listing on QRZ fan purchased a used Icom IC-92AD handheld, two spare batteries, rapid charger and RT Programing sotware, all about 8 months old with remaining Icom warranty. I ordered a DVAP and a VHF/UHF amplifier from HRO in NH. I was excited when all the new toys arrived within a few days of each other. Using the programing software I learned to program all the local vhf/uhf repeaters and the ht was up and running. Next, I had to learn how to program my IC-92AD to operate on the D-STAR network. Problem was I was unable to test out the D-Star programing to see if it worked on the D-STAR network. I was trying to use a radio that I had programed, with which was never tested by making a direct connection to a D-STAR connection (problem). So, I was eagerly trying to get the computer to connect with the DVAP, get the HT programed to connect with the DVAP, and then get the ht to connect to a D-STAR repeater and failed! Frustrating, cause I wanted to play with my new toys. Back to the drawing board, start from square one! Checked and re-installed DVAPTool software, checked and installed usb plugin. Ran DVAPTool program. When the DVAPTool loads, I had to enter my Station Callsign exactly as my call sign was registered on the D-STAR network. I had read documentation that mentioned that some DVAP or Dongle users entered their call sign as "WB1DSG D" to identify as Dongle user. If your call sign is not registered as such it will not work. I re-entered my call sign WB1DSG. Next I needed to find a quiet simplex frequency so my radio could connect to my DVAP. I entered the selected simplex frequency in the DVAPTool window "Frequency (Hz)" and selected "OPEN". I was successful, the Name DVAP Dongle and Serial #: appeared in the window. On my Mac DVAPTool window, I see the notice "Device opened" in red letters. (If yours does not open you will need to check that the correct driver has been installed and selected.) Set the radio to the simplex frequency and to low power before transmitting so you signal don't overload the DVAP. Watching the DVAPTool window, while keying the radio, you will see the following (in red letters) MY: (your call sign) UR: (what you prog in UR: on radio) R1: DIRECT R2: DIRECT (and in lower left part of window) LISTENING TO (YOUR CALL). You will also see CONNECTED TO: REL001 C . Listen and you may hear activity like you would on voice repeater. If you are new to D-STAR radio programing and operation, below are the are settings I used to connect to REF001CL reflector. UR: REF001CL RPT1: RPT2: MY: WB1DSG Helpful link Sorry for being long winded, Hopefully you might find something useful that will get you up and running. Let me know if I can be of further help, 73's Ed WB1DSG

145.67 is a great frequency. Make it standard like 146.52 and put your location out on APRS.

2898. Receive only problem

Yahoo group: DVAPDongle
Date: 2013-12-12 15:14:39 UTC
From: <younkerd@...>
Topic: 2898 Message: 2898

(Problem #1) I am up and running on D-star on my DVAP Dongle but am having a iisue.

I have spent quite a bit of time trying to figure out the issue but have narrowed it down thinking it is a Dplus issue with my call.

My Call WA6JNM will only connect as Receive only when I connect to KF6RAL B node (or C Node) when using the dongle. I have checked my registration and that doesn't seem to be the problem, I had a friend try to link to the same repeater with his call and his DVAP and he got a normal Connection. so then I had him put my call in the DVAP and not make any other radio changes and he found if my call was In that he could only connect as Receive only! So I did the same with his call and it worked on my end.

(Problem #2)
I also when using my IC-92 or ID-880 can connect to the Repeater via RF and I can not use the Linking commands of the Repeater, I can get a status (I) but the Unlink or Link will not work for me at all, I don't know if this is a multipath or signal issue or if it is Related to problem #1.

Anyone able to shed some light on this Issue?

73's Don WA6JNM

Hi Don. I looked through the logs and cannot find any issues on the server side. It is possible that KF6RAL is having issues syncing with the trust server. If you connect to a reflector, do you have the same issues?

2901. RE: Receive only problem

Yahoo group: DVAPDongle
Date: 2013-12-13 01:56:20 UTC
From: <younkerd@...>
Topic: 2898 Message: 2901

Most all the reflectors I have connected to seem to be OKAY, I have seen a couple ports that this happened with, but for the main part it works on the reflector, It is a shame because the two repeaters in the areas that I use both have this Issue going on. KF6RAL and K7YI, I have had a few others along my travels that I can not connect too. I Hope they get it fixed soon as the KF6RAL repeater is one of the few I can work off my handheld. Would this issue be the reason when Using RF (2 or 440) that I can not get any linking commands to respond from the Repeater? It Acts as if I can not use the gateway, I can get a Info prompt back but no other commands work for me on RF.

Thanks Don WA6JNM

You have only registered an "A" terminal so you would have to use an "A" in the 8th character of mycall to be able to transmit. The better solution is to follow the instructions at http://www.dstargateway.org for adding a "space" terminal.

Robin
Originally I had just a space no identifier letter in the 8th spot and the dvap was working fine for about 4 months, then all of a sudden it up and quit. It would not connect at all I now have it working but in receive only, I added the second pc identifier the other nite to no avail. I keep getting that warning that it is a fatal error cannot create a bind file? I am at a point that I am just not sure what to do, I enjoy dvap and dstar but I can't use it and that is frustrating the heck out of me.
Thanks for all your help, everyone.

Hi Al. That error is a bit cryptic. :)

It usually means that the value you entered for the PC Name field was invalid. Try something like kf5smh-dongle (no spaces).

Although I do noy understand why, adding an (space)A after my call in the DVAP tool allowed it to work just fine, as far as I can see on my personal info page nothing has changed from the original setup. While it is working just fine (or appears to be) I am quite confused as to what did what to fix what.
I appreciate all you and everyone else did to get me through this! We are going to have repeaters in the not too distant future and I would love to know how to help folks on their registration problems.

Hi Al. A callsign is 8 characters long in D-Star. It is broken into the first 7 characters for the user call or repeater call and the 8th character for a user is the "terminal" or "initial". That's the field you fill in on the registration page in the initial field. To use only your callsign, you would have to have a space or blank in the initial field so that all 8 characters are used with the 8th character being a space. You only created an initial with "A" in the registration page so you have to put the "A" in the 8th character of your callsign in D-Star. If you go back and create the "space" entry as outlined at www.dstargateway.org, you could omit the "A".

I know you addressed this to Robin and he has answered your question.

I would like add that computers want to see an exact match. If you
register as KF5SMH A, then KF5SMH will not be a match. KF5SMH D will not
be a match.

It's kind of like a phone number - 234-5678 will not match with 234-5679.

If you have any involvement with aprs, W1AW and W1AW-1 and W1AW-2 are all
different entries. Not a match.

Good luck to you as you further explore D-STAR and have fun!

Robin & Adrian

Originally back in June when I first set up my dstar I had used just the spacebar to finish out my call. I had not changed anything until the other evening out of frustration. My system worked just fine, I could connect and had no difficulties whatsoever. I am not certain but I do believe that I had an update mess with my settings and start this whole thing, don't know how but that is what I believe happened.
Anyhow I am up and connected and I know my equipment works, although I have yet to actually talk to anyone. Thanks again

From: <zl1cop@...>
Topic: 2918 Message: 2918
Attachments: 1 described; binary payloads are missing from this source WARC

Can anyone shed any light on the following -

I have a 70cm DVAP which was initially working fine. However it has developed a problem;

Prior to opening the device the green led pulses as normal, however once I hit the open button the green led goes off and stays off and the blue led flashes continuously at about 1 second intervals.

I know the device is receiving OK as I can see the signal strength indicator responding when I key the transmitter, however the Dongle does not seem to be processing the signal.

The DVAP tool seems indicate all is well. (see attached screenshot).

Any ideas?

Are you certain that you are registered as WA6JNM? That would be WA6JNM space space.

Is it possible that you're registered as WA6JNM space A or something like that?

However you're registered is the call sign that the repeater needs to see.

I wish you good luck and that you are a happy D-STAR user very soon!

Thanks Dave,

I registered as "WA6JNM" and used the Space in the "Initial" box, I did also Make a "WA6JNM A" and have tried that as a call also with no luck at all.

What the Strange part of this is is I can connect and use all of the reflectors and Most Repeaters from my DVAP connected as TX and RX (not RO) .. RF Wise I can use the repeater KF6RAL but can not use it to Link under my call, I have used other Hams radio's and had them put my call in and it stops working on the radio using my Call but works with their call, and Vice Versa using their call in my radio?

I have looked at my registration and others have too, but at this point I am wondering if I need to have my call removed from the system and re-register to see if that will help, But why would it work on most every repeater except a couple. KF6RAL and K7YI, what is different about those two repeaters to not allow me to TX via DVAP or use the RF side to Link to reflectors and repeaters using my 2 meter or 440 radios.

So PUZZLED at this point on what I need to do next?

Well, typically many sysops/admins do block connections to local repeaters, it is a preferred and better method to connect your dvap to a reflector which usually has much more bandwidth to handle numerous connections.

Are you able to connect to "any" repeaters?

What is your call sign?

Why do you want to add the A? There is no need to add a separate terminal for another device?

Subject: [DVAPDongle] Adding initial to gateway

Merry Christmas! I wanted to add the A to the initial field on the gateway, how long does it take to replicate through the system? Anytime I try to connect with the A it goes R/O

I have M for my mobile, and that's what I have in there now and it's working fine, so I know it's not a setup problem

Have to say, the DVAP/Raspberry Pi combo is fantastic! Now to cobble a battery for the whole thing....

Tell me,

What model radio are you using?
What model DVAP ?
What are the commands that you use to link, send voice, unlink?
I assume you're using KF6RAL L to link, then sending CQCQCQ after you're linked?
I have seen your call sign pop up on KF6RAL, but after the last group message and while I often connect to KF6RAL from Sandy, it's hit and miss, and I use the A B or C module depending on need.
I've got a couple of Icom radios, if you could let me know which one maybe I could help work out the bugs, I'm using a 2 meter DVAP to connect to KF6RAL and haven't had the problems you're reporting.

Hello Don,

You may want to contact the Admin of the K7YI gateway/repeater. There does not appear to be an issue with your call on other gateways or reflectors. I cheated by trying your call in my dongle. It refuses to allow transmit on K7YI with the message that the call is not registered. Better yet, if anyone knows the Admin, let him know there is an issue and that the K7YI gateway clock is off with the rest of the world.

Topic: 2932 Message: 2939

You should be able to do that with the same terminal. The main time multiple terminals are needed is with two ID-1s so you get two IP addresses. DVAPs, Dongles and radios can all run with just the plain callsign (no suffix).

2940. 440 dvap problem please help me Robin

Yahoo group: DVAPDongle
Date: 2013-12-27 06:59:11 UTC
From: howardp
Topic: 2940 Message: 2940

I have a 440 dvap that was working perfectly using the official dvtool version 1.04 software.
I left the unit on and when I got home from work it was not working.
I checked my Icom id-31a and all was fine with the handheld radio.

then I checked the DVAP when it gets plugged into the usb port all the lights light up.... then the the green light flashes.

when I start up the dvaptool 1.04 software the light flashes blue and it reports the serial number I key my id-31a and it hears but does not transmit back to my radio. I have only used the antenna supplied with the dvap and the official software .

I am feeling sad ....

where can I send it to be looked at ???/

Hi Howard. First, adjust the frequency up/down 5/10 kHz in DVAPTool (while keeping the HT frequency unchanged). See if that makes a difference. Then, download the DVAP util program from www.dvapdongle.com and check to see if your frequency is centered on the HT frequency. You can adjust it using the calibration value in the lower left corner.

If that doesn't resolve the issue, you can send the unit back to me for recalibration. Just send a direct email and I'll send you the details.

73,
Robin

Thanks, for the replies, At this point I feel my ONLY Option is to contact the gateway where I am registered and have my registration deleted off the server. Then re register on a different server and try it.

K7KHA - I will attempt to contact you from your email address on QRZ, would love to talk and see what we can find out.

I know the CommandsI Do know the commands I am using are Valid on All the equipment, I had even put MY Call on anothers Radio when I went to the Davis County Radio Club meeting with that call not working and the original operators call was working Fine. At this Point I am Sure it is a Call or Gateway issue.

Thanks Again.
Don WA6JNM

Hey Robin, Would you like to host my call on Your server when I get it removed from the system?

I suddenly have the same issue with my 70 cm DVAP. It worked flawlessly since early September. Suddenly yesterday it developed this problem. The slow flashing green light stays on as expected until the device is "opened". The green light then goes off and the faster flashing blue LED comes on. The DVAP receives but does not transmit.

I have not seen a solution for this malfunction posted. Robin, what can we do to restore DVAP's which develop this problem?? My DVAP has become a valued part of my station.

From: <aa4rc@...>
Topic: 2918 Message: 2959

Hi Peter. When you key up, do you see your callsign info in DVAPTool? If so, try running an echo test with "DVAP___E" (where "_" is a space) to see if it is both hearing and transmitting. If not, you may need to tweak the frequency calibration by using the DVAP util program from www.dvapdongle.com.

Open DVAP util, set the frequency, and open the device. Then key up and make sure that the spectrum is centered on the chosen frequency. You can adjust it up/down using the calibration box in the lower left.

Ty:
I have a 17 inch Macbook, and I have no problem with the DVAP.
If you are using the ID-51, I would suggest you use the RT Systems software. it has a DVAP function on the programmer (Dstar Calculator) that will help you set up the HT to use the DVAP. They also have some really good videos on their You Tube Channel to help you through it.

I have not been able to get the terminal window to work on the Macbook, but the DVAPTool software works without a hitch so long as you have the most recent version of the software.

Once you get used to the Mac, you won't want any other computer.

2972. 2M DVAP power problem

Yahoo group: DVAPDongle
Date: 2014-01-12 08:38:45 UTC
From: <ctmegaw@...>
Topic: 2972 Message: 2972

G'day All,
maybe I didn't use the correct search parameters but I was unable to find this issue previously. Please provide a link if it has been sorted out prior.

I am using my DVAP through a Raspberry Pi and my mobile (cell) phone providing a hotspot for connection to the internet with an ID-51. Power is provided via a 2600mAh battery pack.

Today I noticed a conversation on REF 1C become choppy (not R2D2) then drop out. I noticed I still had full phone coverage so tried to reconnect to the reflector. There was no response from the DVAP and no lights either on or flashing. I tried a reset and all 4 lights flashed momentarily then no further response.

I then tried a different power supply (12V DC from the vehicle) with the same result. I have tried powering it up from my PC with the same result.

I'm currently on the road and my main desktop PC with the Raspberry Pi and all other software is with the removalist so further troubleshooting may be delayed.

Would like some advice as to whether my DVAP may be terminal.

Cheers
Chris

Topic: 2975 Message: 2975

I have a strange problem. I have a fully functional DVAP system using a Raspberry Pi and a 440 mhz DVAP with an ICOM ID-51A. I CAN connect to any reflector or repeater but CAN NOT connect to any K5TIT repeaters. I have tried the DVAP on a windows and apple machine. I have tried using my IC-7100 and IC-2820 I am using my callsign KB5ZZB no a b or c after. I have spoke to JIM in the K5TIT group and Fred with ICOM. I Thought I would throw this to the group and see if anyone has any ideas. Also this happens with my wife's callsign also.

Thanks
Lawrence

Hi Lawrence. The logs show that you connected to K5TIT yesterday using your DVAP on a Linux system. I don't see a WIndows or Mac connection attempt since the 6th and you were using DVAPTool version 1.02 on the Windows system. The latest is 1.04.

73,

Sounds like it's operating normally. Now you need to connect to something.

See http://dvapdongle.com/Using_the_DVAP.html
In the "Radio Command Reference" section is the format of the link command. You can link to your local gateway or a reflector, as suggested, try "REF001CL" and I'm sure you can raise someone there.

Usually this is result of not being registered on DSTAR..

go to this site: http://query.ke5bms.com/index.php

then enter your call sign. see if you and your terminals are registered. If not, you are not registered.

Hi, I use my DVAP without the terminal ID, no problems.

The important thing to remember is whatever option you choose you must have a perfect match with your D-STAR registration, Radio (mycall) and DVAP software. Otherwise you will only be able to receive and not transmit.

Enjoy your DVAP and D-STAR.

I also had this question when I was getting started with DSTAR, receiving the NEW toys and anxious to get on the air. I suggest that you just register your call sign. I have had my DVAP up and running with just my call sign. Been using DVAP Tool v1.04 on my MacBook Pro w OSX v. 10.9.1. Let me know if you need assistance getting your DVAP up and running with using a Mac system.

2988. RE: [DVAPDongle] DVAP terminal A needed ?

From: Dave Wickert
Topic: 2984 Message: 2988

Another possibility.
I do not know if this is happening in your case, but I have found that a terminal can only be connected to DSTAR once.
If the system sees two routes, it means that one path cannot transmit.

For example, I frequently monitor different reflectors with my DV Dongle as well as operating my 51A through my local DSTAR repeater at the same time. I found that DSTAR was getting very confused if I used the same terminal simultaneously. Others can comment more on the technical side, but to the user it appears as if the DSTAR system gets confused if there are two routes for the same terminal. I now have a dedicated terminal just for my DV Dongle AE7TD<D> and then use my AE7TD<space> terminal for my radio.

Thanks Robin and Adrian for your prompt replies and apologies for my tardy one!

I think it may be a software problem (hopefully) as I now have access to my laptop (I'm still in temporary accommodation until my belongings arrive next week) and when I plug the DVAP into my laptop it fires up and flashes no worries at all, still the same results on the Pi though.

I don't have any software on my laptop, something I can see I may have to rectify, to reflash the card and get it all running again.

Once again, thank you for your replies the support is greatly appreciated.

From: Anthony L. DeWitt
Topic: 2984 Message: 2992

Okay, let me ask this question then. I have an ID-51, an IC-880H, and the IC-7100. I also have a DVAP and a Dongle. When I registered the ID51 and the 880 separately on my D-star home gateway (both with spaces) the second registration was removed (presumably by the administrator) and as a result only one of these registrations shows up. That’s the registration with the space. Because I’ve never had any difficulty whatsoever with most routine communications, I’ve never bothered with separate terminal identifiers for my DVAP and Dongle.

So, I can link my Dongle or my DVAP to W4LEE (Opelika, AL) and W4LEE is connected to REF058(B). I can hear and respond to all traffic coming into W4LEE on either device. But if I try to link directly with my Dongle to REF058(B), it says I am connected for Audio Only and my PTT is grayed-out. I do not have this problem with 1C, 2A, 12A, or 30C, just that reflector.

So, is this a registration problem, or more of a problem with just that reflector? I am not registered on W4LEE (I am registered on WX0BC in Columbia, MO). So perhaps the reflector is checking the D-star registration status of the connected repeaters. I have wondered if I were to link WX0BC to REF058 (not that this makes any sense as 58 is Alabama nets and WX0BC is a Missouri gateway) if I could connect using my Dongle.

I’m guessing someone knows the answer, but I’m pretty sure that someone isn’t me.

From: John Davis
Topic: 2984 Message: 2993

Let me try to be clear about registrations and terminals. First, if you register on one repeater, you are registered worldwide because databases sync. You must be completely registered which means you, the user, initially register on a repeater with your callsign, name, email address, then create a password. Next, that repeater's system administrator goes in and approves you. Hopefully, the system administrator has checked that you are not registered on any other repeater. Registering on more than one repeater can cause problems.

Sometimes the process breaks down here because system administrators may not know you initiated a registration. If possible, send an email to the administrator letting them know you began a registration.

Finally, once approved, you log back into the same repeater and add a terminal. For 99% of the situations, you only need to register ONE terminal usually a "space" for simplicity. YOU DO NOT HAVE TO REGISTER A SEPARATE TERMINAL FOR EACH RADIO. Adding additional terminals usually creates confusion and problems for new users who either forget to add the suffix or add an unregistered one. The result, your Dongle or DVAP does not transmit and you cannot link with your radio. You don't even need another terminal for Hotspots.

One of the only reasons to have more than one terminal is if you have two ID-1 radios operating under the same callsign and you need separate IP addresses to use them for high speed data mode. Originally, there was a recommendation to add an "A" terminal if you're using a Dongle so other users would know they can't callsign route to you. With so few people use callsign routing, it's not worth adding to the confusion and errors.

There are very good instructions on the whole registration process with screen shots at www.dstargateway.org. Just register on your local repeater. Remember, you are not fully registered until all of the steps are completed and you add a terminal.

OK you Linux users....I need help

I only know basic commands and have been learning as I go...which is a good thing.

I purchased a D-HAP, that utilizes a DVAP. To my surprise, I thought it was broken until I realized that it was configured to automatically start up without the GUI interface once it was configured. All, I need to do is turn the D-HAP on and my DVAP is connected.

1st problem, is when I try to use the GUI interface with PI, I can't connect because the DVAP is already running from a Command Line command where I don't know where it is started from? This is because of my limited Linux/Unix usage. So first question is where is the autoboot coming from in Linux.

Here is what I would really like to do.

I would like for my Pi to autostart and search for 3 different wifi connections in a specific order (connecting to the first one that is available), automatically start TightVNC, and automatically start the DVAP with the GUI interface. Am I asking for too much?

As I said, I do it all of the time.

I love using the DV Dongle in command line mode. It gives you a much better history of what is happening. I use the DV Dongle to jump back and forth monitor different reflectors, then when I am ready (as I like holding a physical radio -- I am old fashion I guess) then I use the DVAP to dial it up and start talking. I find it much easier to use a HT rather than a mobile or DV Dongle to have the QSO.

I also use this setup a lot to demo with youth. They also love actually holding a physical radio, i.e. the 51A -- and then we use the DV Dongle to show them who is talking where and how, and jump around. Again, this shows up easier on the DV Dongle's screens with history.

Topic: 2997 Message: 3006

The manufacturer of the DHAP creates a special version of the pie for the DVAP. The version he gives is fairly stripped-down and very tight. However if you want to modify your PI it's fairly simple to create your own version. Start with an NOOB Version of the code strip out what you don't want an ad what you do. You don't really need to be a UNIX/Linux expert. Just google what you need. There is plenty on the web about setting up the PI. Start with the NOOB Raspian distribution, then google the RASPI and DVAP, look for the instructions on autostart. it's best if you have an 8GB SD card as the 4GB might be a bit tight. So start with raspberry pi .org and go from there

Get to the Pi Desktop . Click on the WiFi Config shortcut. If it isn't there open the Pi's Start Menu (The StarTrek Thingy in the lower left corner of the desktop, you will find it under "Other". If you right click on it first it will give you an option to put it on the desktop, incase you need it again. When the app opens, click on scan, and the scan for wif Networks. When you find the one you want, click on it and you will have a chance to enter the wep code.

This is basic operation of the Raspian Operating system, and you could find several resources on the web on what to do and how to do it if you just would google Raspian and WiFi. While the Pi is a solid and great little computer, you really should learn how to do basic operating system stuff. Linux is complex enough and SD cards fail enough that you should learn the basics, like entering the WEP Password.

On the Pi distribution I am using, the is a desktop App called “WiFi Config”. It has a place to enter the WEP code – I use WPA2, so have not tried WEP. When the App starts, select your network in the pick box. Then click the drop down menu “Network”, and select “edit”. I put my key on the “PSK” line, but there are 4 “WEP keys” lines that you may have to use – play around and I’m sure it will work for you.

Hello all!

I am so very frustrated right now. I cannot, for the life of me, figure out where I have something set wrong that is forcing me into "Receive only land".

Here is my setup:
-I'm using an Icom IC-U82 and a DVAP Dongle.
-I am getting the same results whether or not I am running Linux or Win7.
-I am registered with D-StarUsers.org on WX6D, have been approved and have included a screenshot of my "Gateway System" personal information screen.
-My portable radio has KU6P programmed into the MYCALL setting.
-I have KU6P in the DVAP's Station Callsign box.

When I key up and have REF014CL as my target, it connects ok, but it tells me that I am in receive only mode. I can hear other hams but cannot talk to them.

I have read other posts that said each and every instance of your callsign must match, and I believe I have done so, but I can't seem to figure out where I have hosed this up. I have also included other screenshots of the startup of the program, the screen when I connect, etc.

Any help would be greatly appreciated!

Thanks and 73,

Pat - KU6P

UPDATE Problem solved!

I was under the impression that I needed to make a "terminal" entry for each item that I wanted to connect to the system.

On my "Personal Information" page on the D-Star Gateway System, (as seen in the screenshot I had attached in my original post), I had both my DVAP and my hand held radio (IC-U82) entered.

The solution, was to delete the KU6P A ic-u82 entry. This left the DVAP as the only entry on that page.

I hope this helps others who might run into the same problem.

GM Pat,

When you created the record for your station callsign in the D-Star Gateway System did you type a SPACE in the "Initial" box for the first terminal record?

I see you created the "A" terminal ... have you tried using that? It might be the faster way to check since if you need to change the first record it will take a little while for it to migrate through the system before you can give it an honest test ...

I have the same problem, 'receive only' on my DVAP. It is not a registration problem as everything worked fine until I was off the air for several months. Now I can't log into any of the repeater links to the registration site. When I enter my callsign, it says my callsign is not registered! I fill out the form to re-register, but no confirming email ever arrives. Meanwhile, my DVAP is useless.

Something changed in the D-STAR system while I was not using it. Admin software upgrade? My mobile system works okay... so I know I am registered even though I can't log in over the internet.

Any ideas? Anyone?

Latest update on "Receive Only..."

I was able to log onto the D-STAR system after another site emailed me the url of the site I was actually registered at. That problem is solved, but...

...I still get "Remote system connected; receive only" with my DVAP. I did everything stated in the instructions on my profile at the D-STAR registration site. My callsign is correct, the "initial" box is a 'space'-using the space bar on my computer keyboard, and the nickname is my callsign in lower case followed by "-dvap." Now what?

Hi Rob,
The likely explanation is that some repeaters do not allow you to connect to them directly with a DVAP or a DV-Dongle. You might check with the system administrator of the repeater in question.

Enjoy your DVAP and D-Star!

Are you absolutely certain that your call sign in your radio matches your registration? There have been some recent incidents of mismatched call signs and "receive only" seems to be the result.

I hope you get the problem solved.

You're registered on two gateways, KI6WZK and W6CX. You should probably delete your registration on W6CX, since WZK is the one which owns your space terminal.

"Are you absolutely certain that your call sign in your radio matches your registration"?

Yes, My call sign matches my registration

"Some repeaters do not allow you to connect to them directly with a DVAP or a DV-Dongle. You might check with the system administrator of the repeater in question."

I have talked with the system administrator and he hasn't blocked any DVAP or DV-Dongle users into the repeater. When we used his call sign in the DVAPTool, I was able to connect to the repeater without the "Receive Only".

I added 2nd terminal using my call sign with the initial "A" so see if that would work. So far, I'm waiting for it to map through the system. Would anyone else have any other ideas?

Thanks
Rob

Have your admin do a check on his user.txt file on the gateway he takes care of:
As per posting on one of the forums from Robin, AA4RC:

"The current version of dplus had a limit of 50k records so you will experience an issue if your gateway is not syncing properly with the US Trust Server, allowing for deletion of records. You may have more than 50k records in /dstar/tmp/users.txt. You can check this by running:

/usr/bin/wc –l /dstar/tmp/users.txt

If you have more than 50k records, you will need to run the resync script which is provided by Brian, NJ6N.

If you have less than 50k records in the users.txt file, a simple restart of dplus using “service dplus restart” should clear out any deleted records and resolve the issue."

I tested your call sign K7RHM:
I have been prompted to look at this when several complaints have been showing up on the forums about users getting RO on gateways. I tested the call K7RHM and it will connect okay to gateways KJ4MMC and KK4CQQ. Gateways K1XC, W4AES, and W4PLB are RO for this call. The user.txt is <50k on KJ4MMC and KK4CQQ. W4AES, W4PLB and K1XC are >50k.

Following the above procedure took care of the problem. Have the admin read message 10897 from http://groups.yahoo.com/neo/groups/DStar-Gateway/conversations/messages/10897

Robin has mentioned this issue before. I tried to put it all together in 10897. I hope you don't mind I used your call to experiment with.

James,

Thank you for looking into this for me! I have no problem with you using my call sign to troubleshoot the issue. So from what I am understanding, any gateway that has less than 50k or records, i'm good. More than 50k, i'm not. Is there an automatic resync that happens or does the admin have to do an manual resync? If it's manual, how often is it usually done?

After owning a DVAP for about a week now, I have an suggestion... It would be helpful if there were a troubleshooting FAQ on the DVAP webpage. Even though I was registered with an gateway two years ago, I assumed that I was good to go, I wasn't, it was halfway done. I didn't set anything up in the "personal information" page of the gateway and there wasn't my call sign with a space in the initial box. It would also be helpful to have what James said as well along with a link to http://query.ke5bms.com/index.php to make sure that they are provisioned correctly on the DVAP page as well. As I have been researching for my issues, I found that it's the very little details that can make you get receive only. As this info maybe already provided, it's buried in the 1's and 0's of the internet. When your frustrated you don't have the patience to look for that needle in the haystack. Also once you just registered with a gateway or made any changes, set expectations that it may take an full 24 hours for the data to sync with different system. Thats just my two cents...

Rob

Hmm, I don't think that is the solution, as the DVAP always worked before but not now... No changes have been made on my end. Other hams are reporting similar problems.

I can log into W6PW C, but W6PW B reports "Gateway not found!" (Linux), other repeaters report "Romote system connected; receive only and REF01 C works just fine! I am still stumped.

From: <luminoxs@...>
Topic: 3022 Message: 3034

As my solution isn't an "solve all", I feel it's an good start for basic trouble shooting for people who are getting "receive only"... I was also able to connect to my local repeater without getting an "receive only" by doing an "service dplus restart" via root on the gateway. I appreciate everyones help

Rob

Mavericks? If so, right click and choose 'Get Info' and make sure 'App Nap' is disabled.

Set your app to not nap in your options. You might also need to adjust your power saving functions in osx.

Jeff,
If you are running 10.9 (Maverick) then app nap could be at fault. To disable app nap: right click (or ctrl click) on the DVAP app (in finder, looking at Applications folder), select "Get Info" then use the tick box to disable app nap.

3040. RE: [DVAPDongle] UHF DVAP Stops

Yahoo group: DVAPDongle
Date: 2014-02-06 00:08:04 UTC
From: <luminoxs@...>
Topic: 3035 Message: 3040

You need to turn on "Prevent App Nap". Right click on the DVAPTool and goto "get info". A window will pop up. On the top tab, there is an arrow next to "General", Make sure that arrow is pointing down. If it isn't, click on the arrow. You will see an box next to "Prevent App Nap", click that box and you should be good to go.

3042. Help With New Raspberry Pi

Yahoo group: DVAPDongle
Date: 2014-02-06 15:31:15 UTC
From: <lkellar@...>
Topic: 3042 Message: 3042

I just ordered 2 new Raspberry PIs. I have been using the WA6JFK Papasys image with no problems. With the new PIs the image will not load. RPi does not even begin to boot. However the very same card and images runs fine on an "older" "2month old" PI. I have been trying to build an image with a fresh install of Rasbian using DVAPTool-1.04 and have even got in to autostart however I cant see it locally when it boots up. I can see it running in the task manager. I need advice to make this install work...autostart with visible app on desktop and instructions for installing configuring and autostarting x11vnc... OR how to make my original image work again

Thanks
Lawrence

3043. Re: [DVAPDongle] Help With New Raspberry Pi

Yahoo group: DVAPDongle
Date: 2014-02-08 18:26:21 UTC
From: Barry Berg
Topic: 3042 Message: 3043

You state
>> I cant see it locally when it boots up. I can see it running in the task manager.
When people I support say this they are usually logged in as the user pi from a remote console, usually VNC or RDP.

First question: Did you run DVAPTOOL once from the console (using an HDMI or Composit Monitor) and exit the program so it saved the configuration and frequency data?

Second Question: Are you looking at the desktop while using a HDMI Monitor plugged into the HDMI output, or NTSC/PAL Monitor wile plugged into composite out?

The reason I ask is that when you use the Pi Headless and log into it as the Pi user you create another instance of the program that will also autostart the DVAPTOOL However with the autostart mod an instance of the pi user and DVAPTOOL is started on boot, so you actually have two versions running, one you can see on your desktop and one you can't see. The solution in this case is to kill both copies running and then start DVAPTOOL from the desktop you can see and it should run as expected.

Remember while tiny, the Pi is powerfull, and Raspian is a true multi user operating system, which the Pi can actually support. Sure it's only a 700 MHz processor, but that was more than most pc's 5 years ago.

Actually I use and advise the following install:

apt-get update && apt-get install tightvncserver xrdp -y

This installs an nice x11 VNC and an RDP server which will use the Remote Desktop Client that has come standard on Microsoft OS's since XP. It's stable full featured and best of all not only free already loaded on your Windows Computer. It is great to use for sharing desktops between windows machines which was its original purpose, and well debugged so its stable. Better than many VNC clients I have used. I even have an RDP Client for my iphone & iPad that I can use with my Pi

Regards,

Barry

Just figured it out. I did an OS update in the "older" PI. I then transfer the SD card to the "newer" and it started to work. Thanks everyone for the suggestions Lawrence

3045. Image file, Raspberry Pi setup

Yahoo group: DVAPDongle
Date: 2014-02-09 17:32:32 UTC
From: <lewischeek@...>
Topic: 3045 Message: 3045

A while back, I sold my DVAP/Pi setup thinking I would no longer need it. Well, turns out I'll be setting up another one, as I'm not as close to DSTAR repeater as I expected.

My files are on a Windows machine in storage, pending a move, so I need to configure the Pi on a notebook system.

A couple of questions for the group if someone has time to answer, please.

1- From what I recall I used files from WA6JFK, anyone have link to his files, or can suggest another source, that will allow remote start/reboot and connection to hot spot? As I recall the commands were sent from a DSTAR radio to the DVAP.

2- Suggestion on cell service that WORKS as hotspot. While I have and use Verizon (contract soon to expire) the hot spot is a REAL PAIN to us as it drops and requires a reconnect. Xyl uses it for her iPad and we find that every time she closes the iPad cover the connection is dropped, and I have to go into the iPhone settings and turn off/turn on the hot spot to link her up again. Noticed the same when I used the Pi /DVAP in mobile.

Maybe it's something in my iPhone setup, if so I don't know where to correct.

Lew,

Every time I close the cover on my iPad, putting it to sleep, it must reconnect to my LAN when woken up. Fortunately this is automatic. I’d check out the hotspot app to see if an automatic reconnection is available.

It does not matter which gateway you register with, just chose one and do it. Once you're registered on one, it propagates to them all. I'd register with the NJ2DG Group out of Central NJ.

Here's the link: http://www.nj2dg.org/page3.html

Good luck and we'll look for you on the reflectors.

Before getting very deep into the setup of a Raspberry Pi, it might be a good idea to check on one of the Raspberry Pi Forums, such as
http://www.raspberrypi.org/forum/viewtopic.php?f=63&t=48010
http://www.raspberrypi.org/forum/viewtopic.php?f=63&t=48010 and avoid lots of duplication of effort.

It will probably take a little effort on your part to learn about administering this little Linux system, but that is probably a good thing, for other ham radio things you will probably be doing with it!

From: Gary Ownsby
Topic: 3063 Message: 3065

Robert,
I have taken my DVAP, R*Pi, and Icom handheld on international flights several times without any undue attention from the TSA. I am careful to put all of my electronics gear in clear (see through) zipper bags (stiff, thicker plastic type normally used for women's cosmetics). I usually have two or three of these loaded with all kinds of gear (cell phone & HT chargers, USB cords, adapters, SD cards, etc.) If anyone has an interest, it's easy to just pull out any of the clear bags for a quick look-see.

Before wi-fi became so omni-present, I used to carry a directional "cantenna" for wi-fi with me. Back then wi-fi access was often few and far between so catching open-to-the-public wi-fi was always challenging and more than likely a good distance away. There was a small tripod that I used with it as well. When coming back from St. Thomas (USVI), a TSA officer picked it up and asked who the owner was. I timidly raised my hand thinking we were going to have a problem. He asked "what is it?" I told him. He said "does it work?" I replied "yes". He then said "where can I get one?"

It's also a good idea to carry a copy of your amateur radio license with you. There is a wallet-sized version available. So if any questions come up, your license adds more legitimacy to the gear you carry.

Good luck.

Gary, AK4ZX

Hi Robert,

I've had success (which means being ignored) using this strategy with all my ham gear that I have taken on, both carry-on and checked. I make a photocopy of my ham license, and a copy of the picture page of my passport, and lay them across the thing that is radio-related. If it is a circuit board or something like that, I wrap the board with the papers, with a rubber band around it.

I have a small Pelican case for HT's and batteries, and these two pieces of paper are the first things they see when they open the case. I have had zero trouble, both domestic and to and from Asia.

Brian help me out here. I got the os on the card no problem. boots to the desktop. Using LXterminal I typed in your script. All seemed to be going well . Seems like I remember seeing an error something to do with mirror site. Anyway it continued to run for what seemed like about an hour and then when it tried to install the dvaptool program it said it cannot find it and aborted. Any idea what could be happening thanks

Hi,

What makes you think you can't use a 16Gb card?

It surely can be done without problem, but whatever card you chose to use, try to stick with Grade 10 cards at minimum.

(I have two 16Gb Grade 10 cards, each with their own config, I simply swap cards before booting up)

The Philly DStar site is still not back.....I registered on this site when I got my ID-31A. The DVAP I got a few weeks ago is still not working, and it's frustrating. I can receive just fine, but cannot TX. What happens if I register on AA3E in Eagleville? I heard this was a mirror of K3PDR. I was told not to register on more than one site, but if the one you originally registered on is not up and running, what do you do? How badly does it screw up the the system?

I would register at the other site, either AA3E or NJ2DG. It will not screw up the system at all. Then, send an e-mail to K3PDR and request that they delete your account from their server as it is not active. This will be your best course of action with this. For what it's worth, there was a discussion the other day on REF030C that a few folks indicated that K3PDR would not provide gateway access to non-members. I assume this was to recoup operating costs or something. Anyway, gateway access is simple and free. If you aren't getting anywhere with the K3PDR group, NJ2DG is open and accessible to all. Just Google NJ2DG, their gateway registration link is open to the public and they are quick to act on requests.

Hope to hear you on the reflectors soon, REF030C is one of the most active.

The old "terminals" (radios) registration would have been fine, as long as you used the same "MYCALL" info.

This seems to be a very common misunderstanding. A separate terminal is NOT needed for each radio. Simply using the “space” terminal and programming you basic callsign (no suffixes) in MYCALL will work for multiple radios and simplify programming and eliminate the need for changing your registration.

If your running a DVAP,, once you connect to the reflector, you have to go back to your talk channel like CQCCQ.

The first time you start Pi under Linux you will have to configure WiFi. Thereafter it will auto-start whenever you reboot.

That is my experience.
Monty K2DLJ

Do I need separate images for the home wifi and my hotspot wifi or will the Pi auto detect which ever one it sees on boot up and connect to it?

Hi
I just received my dvap dongle when I plugged it in my usb port on my desktop I got no green light. I tried it on my laptop
and got a pulsating green light but no wizard start up menu. I tested my desktop usb port to see if was
defective with another usb connection my keyboard and it was fine. Any suggestion how can i download
drivers if I cant access the driver windows. Confused. Is there something I overlooked

Right click on the dvap tool icon and select get info.

Make sure you have a check mark for the option Prevent App Nap. It's a new power saving option in Mavericks.

Thanks,

Jeff

Try this:

Go to your Applications folder and right click on the DVAPTool app.

Get Info

Check the box 'Prevent App Nap'

and you should be good to go!

Hi,

I just joined this group and I must say DSTAR has been the biggest pain to deal with. I have now spent so much money to get on DSTAR with a ID31 and now a Dongle and I still can't get on DSTAR after 4 weeks of trying everything. My question now is will Mavericks work with the DVAP software being it only says up to Mountain Lion. I installed the driver step by step on their website and nothing. I did install it via Paralells onto Windows 7 but I do not want to have to do that if possible. But even then I have still not been able to get it to work except to the point of the Blue light but after that I am stuck and dont know what to do? So first will it work with Mavericks after that we can go from there.

Thanks

It works just fine with Native Mavericks. You do not need to go to Parallels, and the extra bother of running windows. A couple of things. First you need to load the VCP FTDI drivers from the web site. How to and links in the document are found here.

http://www.ftdichip.com/Support/Documents/InstallGuides/Mac_OS_X_Installation_Guide.pdf

Next you need to turn off Mavericks App Nap feature. I use a desktop so I don't care if it is on or not, but if the DVAP is idle long enough Maverick will put the App to sleep and that causes timeout problems for the DVAP. Here is a link to do that
http://www.cultofmac.com/253064/how-to-turn-app-nap-off-for-specific-apps-on-your-mac-os-x-tips/

Next you will have to program your ID31. Setup some memories in your ID31 using this link to download a sample file, and use your programming software to load it into your selected memories of the ID31. If you look at the 3 reflector links you can replicate them for all Reflectors and also for repeaters.... Depends how much you want to Hack a spreadsheet. The first three will give you the hint on how to set it up though.
http://dstarinfo.com/DVAP-Memories.aspx

DSTAR is a bit different than analog VHF/UHF so be prepared to go into learning mode. In the beginning, it can be a bit frustrating, however, the key to understanding DSTAR is learning to program your radio. When you understand the use of the MYCALL, URCALL, RPT1, & RPT2 fields + using gateways it all makes logical sense and becomes easy. Keep on working it and studying sample/example radio programming and you will get it. It really is the most enjoyable ham radio that I have used in years.

Peter you didn't say what radio you were using not that it matters that much but if your using say a id51 or a id31 it might because of the DR mode. When your using a dvap to link the really only 2 fields that make a differences are the my call of course which is simple enough. As far the UR call field you would either using cqcqcq or the call sign or reflector your connecting to ex: ref030cl. If your in DR mode things are a little tricky at first but it's the same setup. Go into DR mode arrow down to the FROM and choose your dvap simplex frequency. Arrow up to the TO field and press the blue button and choose either the your call sign option and choose what reflector you want to link. operate the PTT and you should hear linked to whatever. after that go back into the TO filed and press the blue button and choose Local CQ. That will put cqcqcq into the TO field. that should do it.

As far as regular memories since you a re using simplex will limit what the your able to put in the different fields cause its smart enough to know you don't need it. Hope this helps a little

You can't directly enter data to those fields, they are filled by your DVAP as it hears signals. Try connecting to your DVAP with your radio and watch as it inputs the data into those fields when it receives your radios signal. It only displays the data while receiving so it's only displayed briefly!

Hi there, if you are using the icom software you can copy the contents of a channel (say #30 for the purpose of this discussion) and then paste it into a channel farther down the line. You could also do an insert anddrop the contents of the channel into the inserted spot.

You can program the unlink channel in every 10th memory location or so.
Not as far to click that way.

IF you linking via id 51a thru Raspberry PI and DVAP
just call up the next reflector and everything is auto'd from the old to
new.

From: Lewis, William (lewiswa)
Topic: 3121 Message: 3122

That seems to be the problem with that utility. There is no directions on how to use it! When the program first opens it shows “0” as the frequency calibration, but this is the field that the user can set and not really being read from the DVAP. I think you need to look at the graph to find out what the factory setting is. If you change that “0” value in any way, it does change the DVAP and then you can never find out what the factory setting was. It does make the change “real time” and no way to back out what you just did. Nothing to save etc. I really messed up my DVAP using that utility. I know this doesn’t help you any, except nobody should use this utility until some directions are written for it.

Bill…….

Hi,
I also have a DVAPDongle, although the VHF version.

I have had a ton of VHF and UHF radios in the last 25 years, and never thought about calibrating (or *having* to do it) these modern pieces of equipment.

Question: why a calibration of the DVAPDongle would be necessary?

I thought only tube-type rigs or older generation of equipment needed calibration from time to time?

.... Just curious to know why and what for, the DVAPDongle would need it; maybe I am missing something important about the dongle.

Thanks to let me know!

Topic: 3121 Message: 3124

The utility shows the actual calibration value currently in the DVAP. If it is zero, you are either very lucky to have a unit that needed no calibration (very rare) or you ran software like the older version of DVAPnode which wiped out the calibration value.

To use the calibration feature, simply key up and center the spectrum display on the center frequency you picked. Use the up/down arrows to do it.

Note that, in general, you should never need to recalibrate your DVAP. If you are going to try, write down the calibration value before you start changing it.

Some programs used for the RPI or BBB require the Frequency Calibration value of the DVAP be inserted into the program. They tell you to use the DVAP Utility to find that value. Before you know it, you're in trouble. One of these programs is FreeStar.

Hi Sylvain. You should not have to recalibrate your DVAP. It is done at the factory. Some folks have run the older version of DVAPnode software that wiped out the calibration value and therefor needed recalibration.

Subject: Re: [DVAPDongle] Frequency calibration.

Hi Sylvain. You should not have to recalibrate your DVAP. It is done at the factory. Some folks have run the older version of DVAPnode software that wiped out the calibration value and therefor needed recalibration.

3129. Destroyed DVAPs

Yahoo group: DVAPDongle
Date: 2014-03-11 18:34:42 UTC
From: <ae4jy@...>
Topic: 3129 Message: 3129

As DVAP designer(and the poor guy who has to repair blown up ones), we've been experiencing a lot of destroyed DVAPs due to a high current source being applied to the antenna ground of the DVAP. The symptom is an obliterated ferrite bead in the ground path in the DVAP that is getting abused with several amps passing through it. Several were reduced to a spherical blob of molten metal with blown pcb traces and all semiconductors destroyed. The only way that much current can pass through the bead is if the exposed antenna ground on the SMA connector or antenna is accidentally touched to a power source. Initially it was thought maybe a lightning strike while using an external antenna could be blamed but that is not the case.
These failures have only started in the last few months so is something new going on.
My best guess is that has something to do with using the Raspberry PI which has an open board and perhaps the DVAP is being touched to some power point on the raspberry pi setup.

Another possibility is the use of the D-HAP enclosure system. I don't have one to play with but from watching the setup video, it appears the 12V battery positive lead is brought out to a screw that is very close to the DVAP antenna and could be easily touched while assembling the unit and would be "hot" even if the power is off.

Is there anyone in this group with a D-HAP that could verify that that red wire and screw near the DVAP antenna side is indeed the battery terminal?

In the mean time just be very careful when using the DVAP around live power connections and don't touch the antenna ground to anything hot or your $250 DVAP may give its life to save your $35 Raspberry Pi :(

Thanks,
Moe Wheatley,AE4JY

3130. Issue that leaves me scratching my head

Yahoo group: DVAPDongle
Date: 2014-03-12 16:32:31 UTC
From: Jack Prindle
Topic: 3130 Message: 3130

I have two DVAPs, Raspberry Pis and have and Icom IC92AD and an Icom ID51. I have used them for several months with no issues.

The one DVAP which is using the PAPSYS Raspberry Pi OS Image is set up at home. The other DVAP which is installed into the DHAP, using the image OS that came with the DHAP, I have set up at work.

My routine is to use the ICOM IC92AD at work after setting up the DHAP and connecting to the network, I use the 92 to connect to my local repeater, K4CO, which is usually connected to REF030C. This has worked fine for some time until earlier this week when I give the command to connect to K4CO I get the response of "Remote System UNLINKED". If I connect to REF030C directly it links right up no issue. If I connect to K4CO directly using the ICOM IC92AD at home with the other DVAP attached to the other Raspberry Pi I get connection to K4CO with no issue.

I am scratching my head as to why I can no longer connect using the DHAP to K4CO directly. It worked fine for months. It works fine with same radio at home using different DVAP and Raspberry Pi under PAPASYS.

Any ideas???????

Loosing more hair over all this head scratching!

Thanks
73, de AB4WS,
Jack

3131. Re: Destroyed DVAPs

Yahoo group: DVAPDongle
Date: 2014-03-12 17:00:11 UTC
From: <hardenedpower@...>
Topic: 3129 Message: 3131

This is Bill Harrison (waving hello) this is my first post on this group.

The post above from Moe asks about the power connections on the DHAP and their proximity to the antenna ground on the DVAP.

I designed the DHAP, and my company, Hardened Power Systems, manufactures and sells the device.

The two exposed bolts in the DHAP do indeed connect to the 12v battery. However the bolt that is adjacent to the DVAP antenna is the negative.

I am very curious to explore this issue / concern further, as I obviously want to reassure users that the DHAP is not going to harm their Dongle. I am also more than happy to explore relocating the battery connections so they are even farther from the Dongle. This is an easy Engineering Change for us to incorporate, although it might make it a bit more involved for the user to swap the NiMH battery after it eventually needs replacement.

Thanks guys!

I just took one of my D-HAP boxes apart and yes, the black and red screw terminals are for the 12vdc battery and they are hot all of the time regardless of the power status of the D-HAP.

I'd noticed this issue when my first D-HAP arrived. I didn't test them but I did take them apart and installed a rubber boot over each one.

The black terminal is very close to the DVAP antenna connector. Use good caution, and there should not be an issue.

I opened my D-HAP to see how it is wired. The screw and wire adjacent to the DVAP antenna connection is the 12V battery ground lead. The positive if another 1/2 inch away from the DVAP antenna connection (About 1 inch away).

That lead would definitely be hot even with the power off since it is directly connected to the battery.

Just a follow up to this thread,
I had a nice exchange with Bill the DHAP designer and he is going to look at some minor changes to the battery lead exposure. Please don't take this as something being wrong with the DHAP as it just a way to make it a little more worry free when installing the DVAP. The existing DHAPs are fine just be careful around the battery terminal or as others have suggested put a piece of tape over it and forget about it.
We've all got spoiled with low voltage circuits that you can touch without getting knocked across the room(yeah I'm old and from the tube(valve) days) but we forget that you still need to be aware of live powered things. Drop a wrench(spanner) across your car battery terminals and you will quickly see how "safe" low voltage things are.

One thought that comes to mind is to check the dashboard page at K4CO to see if there are any other appliances (DVAPs, DVDongles) connected when your connect fails. There is a limit to how many of these can connect to a gateway (usually 4, the admin can restrict it further), so we encourage DVAP owners to connect to reflectors instead of gateways whenever possible.

This may be your issue, otherwise we'll need to look at the log files from the DHAP software to determine where the exact problem lies.

DStar assigns a unique 10.x.x.x ip to each call sign Terminal-ID combination. Is it possible that when the DVAP at work failed to link, the DVAP at home was still connected? If so, and you are using the same terminal ID, there would be an ip conflict and the system may not let you link. You could try setting up a second terminal-ID and use one for work and one for home. The 10-net addresses are only used when using an ID-1 with DD high speed data mode so that would not apply here. You should only have to use a second terminal ID if you are using an ID-1.

3141. DVAP confusion

Yahoo group: DVAPDongle
Date: 2014-03-19 03:52:41 UTC
From: Ted Iglehart
Topic: 3141 Message: 3141

Today my understanding of D-Star and my DVAP collapsed.

I have used my DVAP and ID-51 for about a year using reflectors, analog and occasionally directly hitting a nearby repeater by setting the MY to the repeater/DVAP and the UR to CQ or a reflector.

Today I wondered if my DVAP rather than connecting to a reflector would accept my DVAP in the MY and allow my to set the UR to K5TIT in Dallas. It would not take that. It kept sending the UR with a \ prefix. So, for giggles I reversed it with my DVAP in the UR and K5TIT in the MY, which to me didn't make sense, but all of a sudden their they were. What was more confusing is that my DVAP only had the blue light blinking when I was listening to people talk. It was not the usual red and blue during receive?.

How was I hearing the QSO with no observable activity and why did I have to reverse my configuration. This seemed to violate what I have been doing for the past year? I did not try to transmit because I was too confused at that point.

I went to this page http://query.ke5bms.com/index.php

and entered KC9DHR

The return indicates to me that you may not be registered.

If you would like to compare, you could enter my call sign and see what
that looks like.

Note: I don't have a DVAP or a DONGLE; those entries were made by someone
else. I have come to understand that (depending upon interpretation) the
first entry (callsign only) is all that is needed for you to be able to
successfully use D-STAR.

If I am not correct, I assume that someone will correct me. I hope that
will be done politely and in the spirit of helping one another.

When you created your call sign on that server, how many terminals did you create?

You should have at least two, here's my example on the NJ2DG server:

Call Sign: Description:
W2GLD user
W2GLD A dvap-dongle

Then, setup your DVAP to use the "XYXXX A" callsign and then your radio for the user callsign and you'll be all set.

Good luck,

Jerry, W2GLD

I respectfully disagree with the statement that you should create at least two terminals when registering. You do not need a separate terminal to operate a Dongle or DVAP. Adding an extra terminal has been a source of confusion for new Dongle/DVAP users who don’t know what to put in the callsign field or put the wrong thing there.

For 99.999% of D-STAR users, only a “space” terminal is needed and can be used for multiple devices or radios. My advice is only add a “space” terminal (no suffix) and program only your callsign into all of your devices.

I was able to further identify that the DVAP tool will stop running for some reason suddenly. I restart the tool and it goes back to ³normal² for an indeterminate amount of time until it stops again. I have an iMac and I did load the FTDI serial driver. I have an iMac, at home, running Lion and have had no problems to date.

Thank-you for any suggestions that can be offered.

Thanks Ed, I hadn't thought about that. I was so confused with receiving
while seeing no activity that I didn't think of the ramifications.

I too had this issue earlier this week on my new dvap and the mac and pc. It was discussed some time ago on this group. The power save function has to be disabled on the mac. Im telling you this from memory but from the desktop, right click on DVAP tool and open "get info". Then disable the "nap" function. Im not at my Mac computer right now but the info is on this group some time ago.

If you are running Mavericks, check and make sure you have disabled "app nap" for the DVAPTOOL app.

3160. RE: [DVAPDongle] DVAP confusion

Yahoo group: DVAPDongle
Date: 2014-03-21 04:33:06 UTC
From: Dave Wickert
Topic: 3141 Message: 3160

However the question is how you configure your 51a for a DVAP.
If you go here:
http://dvapdongle.com/Using_the_DVAP.html
It is pretty clear. It is simplex -- thus RPT1 and RPT2 are not used.

Program Your Radio

Enter your callsign into the MYCALL field of your radio.
Select DV mode and configure simplex operation, usually by holding
down the "DUP" key until there is no "dup+" or "dup-" on the radio
display. You do not need to enter RPT1 nor RPT2 since the radio
will place "DIRECT" in both when in simplex mode.

All commands are entered into the URCALL field as detailed below.

Radio Command Reference

Enter the following values in the URCALL field on your radio:
"DVAP I" (request voice ID from the DVAP)
"DVAP E" (key down and speak for echo test)
"CQCQCQ " (transmit to a connected system)
"xxxxxxmL" (to link, replace XXXXXX with the gateway or
reflector callsign making sure to use 6
characters filling the end with spaces as needed.
Replace the "m" in the 7th character with the module
to which you wish to link. Use "L" in the 8th
character to indicate the Link command. For
example, to link to Reflector 001 module C, use
"REF001CL" in URCALL. To link to gateway W4DOC
module A, use "W4DOC AL" in URCALL)
" U" (unlink from a linked gateway/reflector. Make sure the “U”
is in the eighth position of URCALL)

Note that, other than "CQCQCQ ", the commands above are processed locally
and not transmitted to a connected system.

You set the radio for DV simplex which means that the RPT1 and RPT2 is not used.

Hope that helps.

You should never set the MY to anything but your call sign. Setting it to the repeater’s callsign may cause significant problems with the network.

To connect to the K5TIT repeater, you should set the following

Your Call Sign

RPT1 Call Sign

RPT2 Call Sign

K5TIT BL

DVAP

DVAP G

Subject: [DVAPDongle] DVAP confusion

Today my understanding of D-Star and my DVAP collapsed.

I have used my DVAP and ID-51 for about a year using reflectors, analog and occasionally directly hitting a nearby repeater by setting the MY to the repeater/DVAP and the UR to CQ or a reflector.

Today I wondered if my DVAP rather than connecting to a reflector would accept my DVAP in the MY and allow my to set the UR to K5TIT in Dallas. It would not take that. It kept sending the UR with a \ prefix. So, for giggles I reversed it
with my DVAP in the UR and K5TIT in the MY, which to me didn't make sense, but all of a sudden their they were. What was more confusing is that my DVAP only had the blue light blinking when I was listening to people talk. It was not the usual red and blue
during receive?.

How was I hearing the QSO with no observable activity and why did I have to reverse my configuration. This seemed to violate what I have been doing for the past year? I did not try to transmit because I was too confused at that point.

I am running Mavericks and, with all the other issues it has caused me with my other software, I wish I never downloaded it. The iMac at home, has not yet been upgraded to Mavericks and that explains why I am not having a problem with that one. There is no "app nap" setting on that version of the OS.

Thanks for the very helpful tip to all.

This is working for me. Is there a way to perform a gateway call with the DVAP? I am now able to link directly to another repeater and the reflector option has always worked.

There is a note in the manual that says if the FROM does not have a gateway defined, then the gateway call option is not available. It looked like the DVAP node setup in my Raspberry Pi has the option to specify a gateway?

Subject: [DVAPDongle] Re: Destroyed DVAPs

This is Bill Harrison (waving hello) this is my first post on this group.

The post above from Moe asks about the power connections on the DHAP and their proximity to the antenna ground on the DVAP.

I designed the DHAP, and my company, Hardened Power Systems, manufactures and sells the device.

The two exposed bolts in the DHAP do indeed connect to the 12v battery. However the bolt that is adjacent to the DVAP antenna is the negative.

I am very curious to explore this issue / concern further, as I obviously want to reassure users that the DHAP is not going to harm their Dongle. I am also more than happy to explore relocating the battery connections so they are even farther from the Dongle. This is an easy Engineering Change for us to incorporate, although it might make it a bit more involved for the user to swap the NiMH battery after it eventually needs replacement.

Thanks guys!

Subject: [DVAPDongle] Re: Destroyed DVAPs

This is Bill Harrison (waving hello) this is my first post on this group.

The post above from Moe asks about the power connections on the DHAP and their proximity to the antenna ground on the DVAP.

I designed the DHAP, and my company, Hardened Power Systems, manufactures and sells the device.

The two exposed bolts in the DHAP do indeed connect to the 12v battery. However the bolt that is adjacent to the DVAP antenna is the negative.

I am very curious to explore this issue / concern further, as I obviously want to reassure users that the DHAP is not going to harm their Dongle. I am also more than happy to explore relocating the battery connections so they are even farther from the Dongle. This is an easy Engineering Change for us to incorporate, although it might make it a bit more involved for the user to swap the NiMH battery after it eventually needs replacement.

Thanks guys!

3170. Raspberry Pi Image.

Hi Folks,

I wonder if anyone has built a Raspberry Pi Image with the DVAP Tool and made it available for download?

Regards,

Andrew.

Andrew,

There are a number of implementations available. Try Googling it and searching this forum.

I have not had any trouble talking to them. They answer their phone and the customer service I've had so far has been fine. I called on their main line at about 4 pm CDT today and got right through, no worries.

They seem to be pretty responsive to me. Just my take. I am sure others may have different opinions.

FWIW, I have no interest in the company other than that I am waiting for a product to come from them.

Topic: 3174 Message: 3174

Following most of the instructions for installation of the DVAP tool on a Raspberry Pi, I was able to get it running on a BeagleBone Black ("BBB") running Debian (Wheezy). However, in order to run the tool, I need to start a GUI. The procedures for the Raspberry Pi (such as "startx") do not work on the BBB.

Has anyone successfully found a way to start the DVAP tool in a headless automated fashion on the BBB? I would rather not use VNC to log in and start the tool in the GUI if at all possible. I'd rather simply turn on the BBB and have it automatically launch the tool. The procedures for the Raspberry Pi are not working on this board.

Google DVAP installation. There are some good and simple instructions out there. If you have no luck, you can email me with specific questions.

It would depend on how your DVAP is set up.

What software are you using for it?

does it require RPT1 and RPT 2?

you will need to program the frequency as a duplex plus or minus but the split has to be 0.000 so that the UR: MY" and RPT1 and RPT2 fields can be utilized.

You do not use a repeater with a DVAP to link to another Repeater

DVAP Does not require RPT1 or RPT2 to be set. It should be left blank.

To connect to a repeater just place in the URCALL field the CALLSIGN Module Link

Ex: KG7ZMM BL

The module in the 7th character place and L for link in the 8th Character Place.

If you are linking thru a repeater then you want to set your frequency with the Duplex set for either - or + and the Offset to 0.000 then set RPT1 to the repeater Callsign and in the 8th digit to the module you will be using and then in RPT2 set it for the repeater call sign and in the 8th digit set it for G. this will give you gateway access.

Recently asked on this forum was a similar question with the 51a.
And it is likely that the same applies to your 7100.
A DVAP is not like a DStar repeater -- its commands are different.

If you go here:
http://dvapdongle.com/Using_the_DVAP.html
It is pretty clear. It is simplex -- thus RPT1 and RPT2 are not used.

Program Your Radio

Enter your callsign into the MYCALL field of your radio.
Select DV mode and configure simplex operation, usually by holding
down the "DUP" key until there is no "dup+" or "dup-" on the radio
display. You do not need to enter RPT1 nor RPT2 since the radio
will place "DIRECT" in both when in simplex mode.

All commands are entered into the URCALL field as detailed below.

Radio Command Reference

Enter the following values in the URCALL field on your radio:
"DVAP I" (request voice ID from the DVAP)
"DVAP E" (key down and speak for echo test)
"CQCQCQ " (transmit to a connected system)
"xxxxxxmL" (to link, replace XXXXXX with the gateway or
reflector callsign making sure to use 6
characters filling the end with spaces as needed.
Replace the "m" in the 7th character with the module
to which you wish to link. Use "L" in the 8th
character to indicate the Link command. For
example, to link to Reflector 001 module C, use
"REF001CL" in URCALL. To link to gateway W4DOC
module A, use "W4DOC AL" in URCALL)
" U" (unlink from a linked gateway/reflector. Make sure the “U”
is in the eighth position of URCALL)

Note that, other than "CQCQCQ ", the commands above are processed locally
and not transmitted to a connected system.

You set the radio for DV simplex which means that the RPT1 and RPT2 is not used.

Hope that helps.

Cheers Brad

Hopefully the Dvap will be with me today and I can give it a go.

I'm sure I will get my head around it and if the DVAP does its job and
works like I think it should I will be looking for a handy something like
the 92 or the 51

Topic: 3186 Message: 3187

1) Put DVAP reflector/repeater desired connection in the “To” field of ID51
2) Put frequency of DVAP radio into “from” field
3) Key the ID51 to establish the link. You should see a scrolling message on the ID51
4) Change the “to” setting to “CQ CQ CQ”
5) enjoy

Go to dstarinfo.com and check out programming icom radios under the repeater tab. There is a menu selection for DVAP. It will get you started. After that it simply application.

You have to get the DVAP frequency and the ID51 simplex frequency to match up. Either change the DVAP or program the ID51. Then set up the ID 51 for simplex on that freq. Put CQCQCQ in the TO, and that is all there is. If you want to connect to a repeater or reflector, put link to from repeater list to the repeater you want first, then transmit normally.

Don't forget to dial down your power output on the 7100 to the lowest setting. 1% should do just fine.

3193. Re: BeagleBone Black

Yahoo group: DVAPDongle
Date: 2014-04-04 00:13:07 UTC
From: <phoggberg@...>
Topic: 3176 Message: 3193

The reason that startx doesn't show up on the BBB is that you don't have X11 installed. It is most likely that you don't have a desktop manager installed as well. The native Linux system for most BBB is Ubuntu which is good, but slightly different from what the Raspberry Pi runs which is Debian. If you don't have a preference, I would start over and flash Debian Wheezy onto the EMMC. That will make your BBB compatible with most of the documentation out there. Instructions on loading Wheezy are located here>
http://elinux.org/Beagleboard:Debian_On_BeagleBone_Black
http://elinux.org/Beagleboard:Debian_On_BeagleBone_Black

once you have it installed on the EMMC or the SD card (EMMC will run faster) make sure that your software is up to date. While running in root mode IS VERY Dangerous, in this case doing so much system stuff, I just get into root mode by entering (Note the # is the system response, you do not enter it)
sudo bash
Then I continue without having to enter sudo every time. Sudo is used to help keep you from destroying a system by making you enter it on every command, but inthis case you will be doing so much, might as well just do it and make life a bit easier on yourself.

Next make the system up to date by entering
apt-get update && apt-get upgrade -y
apt-get dist-upgrade -y
After all the shooting dies down
you need to install X11 and the desktop manager, I would use LXDE since that is what the Pi uses.
That is documented here
http://elinux.org/Beagleboard:Installing_LXDE
http://elinux.org/Beagleboard:Installing_LXDE at the bottom of the page.

While you said you want it headless, I would put in the mechanisms to run it from another computer for debugging and maintenance purposes. So I would while still in root mode enter
apt-get install tightvncserver xrdp -y
apt-get update && apt-get upgrade
reboot
Now you can access your system from your PC by starting Remote Desktop Client (in the accessories/communication entry) and entering the ip address of the BBB and the userid and password.
Now install the self starting version of the DVAPTOOL as documented and you are done.
Unless you are using a Ethernet connection you should use a powered USB hub so you can use a WiFi Dongle and the DVAP

Barry, K0BSB

3194. D-STAR Class Returns to Dayton Hamvention 2014

Yahoo group: DVAPDongle
Date: 2014-04-04 19:31:28 UTC
From: <wb4qdx@...>
Topic: 3194 Message: 3194

The ultimate D-STAR training class, D-STARInfoCon 2014, returns to Dayton Hamvention for the third year to provide an introduction to D-STAR for new users getting on the air and more advanced information for experienced D-STAR users. The three-hour class will again be held at the Drury Inn at 6616 Miller Lane in the heart of hotel row near Hamvention. This year’s topics will include using DR Mode, using a Raspberry Pi with your DVAP, updating Repeater Lists for DR Mode, using D-RATS for data and much more. The new Icom ID-5100A will be demonstrated. All registered class participants are eligible to win an ID-51A dual-band D-STAR handheld to be given away during the class.
The cost of the class is $15.00 and includes all course material. Pre-registration is required and seating is limited. Registration and payment via PayPal can be found at www.dstarinfo.com http://www.dstarinfo.com/. For more info, send an email to info@dstarinfo.com mailto:info@dstarinfo.com?subject=InfoCon%202014%20info%20request.

3195. Dvap says not linked but I can still hear the reflectors

I think I was actually already at this point. I had tightvnc installed, and was able to log into a desktop using a remote VNC viewer, and could start the DVAP tool from the desktop. What I want to do is to auto-start it when the BBB boots in Debian. I was also able to reproduce the instructions provided, but the only missing part is the auto-start.

3204. DVAP Receive Only on W9BIL and W9YR only

Yahoo group: DVAPDongle
Date: 2014-04-08 11:19:26 UTC
From: Ralph Zancha
Topic: 3204 Message: 3204

Hi everyone I have a strange one.

I am the administator for the W9BIL repeater and am registered through the W9YR repeaters. When I try to connnect to either of those repeaters I get linked receive only. Works fine on the reflectors and other repeaters.

Also I have noticed that when I try to send commands to link and so forth to the W9BIL machine it just ignores them. I tried a freinds call in my ht and everything works fine.

Any ideas?

Thanks
Ralph Zancha

I don't have an answer but I'll share my similar experience. My DVAP has been up and running for several weeks with no problem until this past Sunday when I attempted to connect to Reflector 1C for the International Dstar Net. I had the same issues you are having. After relinking 1/2 hour later I was able to finally link. The net controller was aware that a lot of people could not link up. He mentioned it might be the reflector was too busy.
It happened to me again this past Monday trying to link to Reflector 26 for the raspberry pi net. This time I couldn't link at all nor was I able to hear the net in progress like I was for Reflector 1...but I was able to connect to other reflectors.

Try connecting to other reflectors and your DVAP may work. One thing to note is I heard on Reflector 12's Tech Net that the last DStar upgrade for the repeaters have given some repeater owners problems with the upgraded system. So it may be the reflectors and not your DVAP that has the issues.

I had exactly the same problem across 4 different computers on the same network. In my case it turned out to be the router i was using a Billion Bipac 7800N. If i connected via my phone or another router then the program worked as it should on all the systems i tried. I ended up connecting the dvap to the raspberry pi and even though it was still going through the same router it was fine. G0UEX

Topic: 3200 Message: 3213

The connected to field should continuously display the reflector you are linked to, regardless of whether or not a station is transmitting. If it doesn't, you don't have a link established. You must establish the link using the REF001BL command in UR first of all. Then, after the link is established, you can transmit voice using the UR command CQCQCQ.

Subject: Re: [DVAPDongle] Still having "issues" with DVAP

The connected to field shows nothing until a station comes through and then it displays the link info. It then goes blank as the station's PTT is released.

3216. Application failed to start

Yahoo group: DVAPDongle
Date: 2014-04-11 15:47:27 UTC
From: Jerry Brock
Topic: 3216 Message: 3216

I installed the DVAP per the webpage on 2 different laptops.
Windows XP and Windows Vista.
Got the DVAP icon and message "application failed to start"
"dnssd.dll not Found..
Turned off both firewalls, my dsl modem has been opened so
I can access Echolink xmit and recv.

What do I do?? These laptops are both pre 2009 vintage.
Do I buy a windows 8.1 laptop???
Any suggestions will be appreciated..

I am playing around with the DVAP and connected it to a through glass antenna which is on my 16th floor balcony. When I mentioned this on another forum, someone said that they heard that it is not suggested to use an external antenna with the DVAP due to the potential of damaging the DVAP itself.

Has anyone run into an issue with using an external antenna with the DVAP? I wanted to double check before running into potential problems with the device.

From: Woodrick, Ed
Topic: 3222 Message: 3225

There is little to no protection built into the DVAP. Static discharges can build up and take it out, and since it is connected to a computer, there is some susceptibility there as well.

Jeff

I've used my DVAP for over two years with a mag-mount antenna with excellent results. I have no experience with the "connected through glass" configuration that you are planning so I'm not sure whether that would introduce any issues. I get about 1/2 mile range with the antenna mounted on a cookie sheet on the floor (hidden from the XYL's aesthetic gaze).

3229. A Follow Up on the Hardened Power DHAP unit

Yahoo group: DVAPDongle
Date: 2014-04-22 14:48:02 UTC
From: <aldewitt@...>
Topic: 3229 Message: 3229

Recently I ordered a DHAP unit from Hardened Power after learning about them here. I received my unit and it worked exactly as advertised. However, I think it is important to note that the design of the unit I got is markedly different from the one shown in their video. The one shown in the video has two screws up near the battery terminals. In the version I received these are absent and the wires simply run beneath the area where the DVAP Dongle sits. If anyone wants I can take pictures and post them.

If there was a concern for the antenna touching the power connections, it would appear that this new design obviates that issue.

I had to wait a little bit longer for my D-HAP than was originally projected, and I suspect it was because of this re-design. The wait was very well worth it.

Just my two cents worth (and probably overvalued by 50%).

3230. Problems with DVAP connection drop out on OSX Mavericks

Yahoo group: DVAPDongle
Date: 2014-04-24 03:00:41 UTC
From: <gchapel@...>
Topic: 3230 Message: 3230

I bought a new DVAP Dongle about 1 1/2 months ago.

Initially I was running DVAPTool under OS X Mountain Lion but upgraded about 2 weeks ago to Mavericks.

Since the up grade, I have noticed that my DVAP now constantly loses it's connection after about 10 minutes of operation. The main window still shows it connected and the text shows that a call sign is talking but I get no audio out to the radio.

When I try to unlink from the repeater the DVAP dongle no longer responds to commands. I can see it flash as if it gets signal but it just doesn't respond.

If I force disconnect and force quit the DVAP Tool app and restart it, all is well for about another 5 minutes or so then a disconnect again.

I am going to try with another computer running OSX Mountain Lion but and see if it really is Mavericks or if my dongle went bad.

I would think it would last longer than 2 months. If it is bad do you think HRO will exchange it!

I am also getting the same problem. I bought my Dongle about 3 weeks ago and run a desktop computer running vista, although I have tried it on my work pc that runs Windows 8.

I get the same issue with it disconnecting and some times I get it to struggle to connect in the first place! I also get the same issues of the correct messages on the radio but no audio. It just appears that the radio and the dongle fail to speak to each other.

I am going to contact my supplier again today.

You’ll probably get about a dozen answers to this. It has come up on this group before. But anyhow, in Mavericks, right click on DVAP Tool in the finder screen; then click on Get Info. Turn off app nap. That should fix the problem.

Your problem is that you have not disabled the “app nap” feature in Mavericks. Right click on the DVAPTool software, go to properties, and uncheck the “app nap” box. Problem solved.

I'm not an Apple user, but if you look back at previous posts you will find other users have had the same problem.

The solution seems to be to prevent an 'app nap' on your o/s see previous posts for detail.

From: chipmckcmo@...
Topic: 3243 Message: 3243

I have been messing with the DVAP and the IC-92AD for about 12 hours now and am getting frustrated. Might it be possible for someone to share a working RT Systems file with me. My 92AD works great on my local repeater but not so much on the DVAP. I have had no success so far. I used the FAQ from the DVAP site and tried to match up with the 92AD information but my old eyes might have missed something.

As far as the DVAP goes, I never got all the screens shown in the installation document but the green LED is slowly flashing. Is there a way to tell if it is actually working or not?

The DVAP Tool is working.

ANy suggestions appreciated.

Robin,
I did just that and the DVAP Tool now works. I have now been able to open the tool session and get some communications between the IC92AD and the DVAP. I have not been able to link to a reflector yet. When I key the HT while on the CQCQCQ channel I do get a message that tells me that the DVAP is not linked. When I dial up a reflector in the 92AD and key up I get no message back oral or otherwise. That is where I stand right now. Seems that I am getting closer but I have hit a wall for the moment.

I am using the DVAP Dongle with Win 8.1

Plugging the device into the computer, I notice the lights operate properly, screen display shows
Name: DVAP Dongle, Serial # yyyyyyy
I am concerned about the lack of Serial #

92 Settings
UR: CQCQCQ
R1: rptr B
R2: rptr G
My: my call

Display Screen
UR:CQCQCQ
R1: Direct
R2: Direct

No network response from repeater I am trying to connect to.

I am looking for a manufacture service department.

Any ideas ?
Tnx/73

Apparently I did whatever I did without knowing what I did. Sounds funny
but once I got the U for unlink into the correct (8th) position all is well.
I do not think I could do the exact same thing again and have it work.

Right now it is working fine. Thanks for the reply, I appreciate your input.

hello group

I am selling my barely used mostly receive only icon ic-2820h dual band fm transceiver. the closest d-star repeater to me is almost too far away to enjoy this rig. i have since bought a handheld and dvap and decided to go that route for my d-star fun. included in the auction are: all original packaging and manual, ic-2820h with optional ut-123 d-star board installed, gps antenna, all original accessories (hand mic, mounting brackets, power cable, remote head extension cable) the power cable has anderson power poles installed on the end, nifty mini-manual, nifty e-z guide to d-star operation second edition book, and rt systems programming software version 4 on cd and orange programming cable (usb-rts05 the one that connects to the data jack). purchased on 5/20/2012 serial # 0507017, item is in excellent condition only ever used indoors as a base station in a non-smoking environment. item is sold used as-is, no returns no refunds, only shipped to continental united states address, payment must be via paypal. SHIPPING IS FREE!! thank you for viewing my listing!!

please copy/paste this link to view my ebay auction
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=261471010506
or search for item #261471010506

Larry,
I found my issue and it appears to be working fine on Windows 8.1. I can't tell you where I saw it but I did finally find mention of Windows 8 in an install document. My issue seems to have been the placement of characters, especially in the Unlink field. Once I found and fixed that it started working. Go figure.

On the road with a new WIN 8.1 laptop and the DVAP continues to unlink itself every few minutes. I am in a hotel on wifi as I type this so I got a connection. I have running in the background the dvap software and surfing the web and the radio just comes on and says "unlinked" . In order to get it back I have to send the unlink command from the radio to let it know it actually is not linked then I can send the link command again but it only stays about 5 minutes before it drops. I have different reflectors just to see but it doesn't make any difference. I guess when I get home I can see if it does it there. I just got this pc so haven't had time to try it out before getting on the road

Is it an active reflector? If I was to guess, I'd say you're running afoul
of the hotel's firewall dropping the connection from the DVAP software to
the reflector after not seeing any packets for 5 minutes.

I’d assume that the hotel Internet connection just ain’t cutting it. All it takes for some hotels is a couple of guys watching movies to completely saturate their connection.

I have the same problem but with Mac OS X Mavericks.

There is an option in OS X Mavericks for "App Nap". I toggled it off so that the App would not sleep to help the battery life. It helped but did not solve the problem. My DVAP Dongle is still loosing it's connection with the radio. I can transmit but the dongle won't see the transmission.

If I close the DVAP Tool app and restart, all is well again until it looses it's connection.

Before I toggled the App Nap option off, my DVAP Tool would lose connection every few minutes. Now it seems to be a random time frame.

Never had the problem before with OS X Mountain Lion.

Or probably more likely, the reflector is quiet and the firewall/router the hotel is using has aggressive timeouts for connections. If it’s almost always 5 minutes from launch it drops and the reflector is quiet I’d suspect the hotel has a connection timeout of 5 minutes. I don’t think there’s any traffic flowing when the reflector is quiet though I haven’t done a packet capture or anything to verify.

TCP Keepalives with an aggressive timer might be a solution for this, but would take modification of the DVAPtool or reflector code to turn the option on (although even with the option turned on the Windows default timer of 2 hours still wouldn’t help in this case.)

I did as well, but the original poster explicitly said Windows and I don’t think it’s the same thing. With the Mavericks App Nap problem you don’t get the “unlinked” problem (or at least I don’t recall so with mine); with App Nap the software loses connectivity to the hardware without realizing it and wouldn’t be able to transmit “unlinked."

Hello
I have purchased DVAP but I am having some real problems.

My computer did not recognise my new software and so would not let me download it. I found a site that I could download manually however it kept telling me that MINGWN10.DLL was missing. I then found another site called Bonjour where I downloaded and after downloading that allowed me to download Dvap version 1.04 on my computer.

This is my problem.
The grey box is greyed out. I can not open the Dvap device as it is greyed out. This means I cant input the frequency that I am going to use.

Hey Guys,

First and formost, I'm registered to use DSTAR and have been for a few years. So, I know that I can use repeaters around me that are DSTAR. The problem that I am having is that no matter what reflector or repeater that I link to via my 70 cm DVAP Dongle comes up as recieve only. My current laptop is running Fedora 20 32bit (I have also tried 64 bit just in case with the same results) and I've also tried this with Windows xp, vista, 7, and 8 with the same results. Ubuntu seems to do the same thing as well. Any help would be appreciated.

Hi Ray.

You have registered an "M" and "P" terminal on the WX8GRR gateway. You are using a space in the 8th character of mycall. You either need to register a "space" terminal as shown at http://www.dstargateway.org http://www.dstargateway.org or place an "M" or "P" in the 8th character of mycall (and in DVAPTool).

3269. dnssd.dll missing

Yahoo group: DVAPDongle
Date: 2014-05-14 19:23:52 UTC
From: kresmor@...
Topic: 3269 Message: 3269

Hi all
I have been pulling my hair out with this one for weeks with no success! I have two laptops, one running Vista and the other is a brand new Dell running Windows 8.1. I cannot get the Dongle to work on either of them.

I have installed the software as directed, but when I click on the icon, I get a message telingl me that the device cannot open as a dnssd.dll file is missing. The green light is pulsing on the dongle but thats it.

I tried my office desktop, that runs vista, and everything works as it should there, but try as I might, I cannot seem o resolve the issue on the Laptops.

I am sure that someone with more brain cells than me might be able to offer a solution before I take a hammer to the bloody dongle!!!

Subject: [DVAPDongle] dnssd.dll missing

Hi all
I have been pulling my hair out with this one for weeks with no success! I have two laptops, one running Vista and the other is a brand new Dell running Windows 8.1. I cannot get the Dongle to work on either of them.

I have installed the software as directed, but when I click on the icon, I get a message telingl me that the device cannot open as a dnssd.dll file is missing. The green light is pulsing on the dongle but thats it.

I tried my office desktop, that runs vista, and everything works as it should there, but try as I might, I cannot seem o resolve the issue on the Laptops.

I am sure that someone with more brain cells than me might be able to offer a solution before I take a hammer to the bloody dongle!!!

Help

I think the answer is here on the list somewhere. You must install bonjour from Apple I think.

I'm having trouble with my DVAP responding to my radio after connection with reflector or repeater has been established. It seems to work at first but then locks up and with not allow me to transmit or unlink after having been connected for a bit. I've tried several computers and get the same issue with each. I end up having to force disconnect. Any help appreciated! Thanks

Topic: 3243 Message: 3276

Hi Chip,

Saw your post and can relate to being frustrated, I just found myself in your situation. Are you still having an issue or did you get it figured out? I'm not sure what "screens" you were expecting to see, but you can see the attached main screen is all you really see. If you want to test the system the quickest way is the just do an echo test.

For the echo test just setup your radio in the following fashion.

UR: DVAP___E
R1: NOT USED
R2: NOT USED
MY: <YOUR CALL>

Key up and then do an echo test and you should hear yourself come back.

Another test you can do is

UR: DVAP___I
R1: NOT USED
R2: NOT USED
MY: <YOUR CALL>

this should kick back your dvap status

Hope this helps!

From: chipmckcmo@...
Topic: 3278 Message: 3278

I am looking for any instructions that might be available for programming the IC 92-AD in a mobile configuration with a DVAP and a Raspberry PI. I have the DVAP working with a Raspberry PI and the 92-AD at home but now I would like to use my Sprint Galaxy4 operating as a hotspot in my car. I have not been able to find any information that helps with the mobile particulars. One final thing, if it might matter, I use RT Systems software generally to program the 92-AD. Any suggestions?

Hi Brad,
First and foremost Are you using Robin 'a DV Tools software? If not I'm told it is more reliable. Second trying resetting your WiFi box. I do not use any repeater to access a Gateway.
This may sound obvious , but program your DV Dongle to say 145.750
(do not use any dismal points)
Ex. 14575000
If 440 MHz same applies.
This will be a direct connection.
Negating a repeater to use Gateway.
As My Call sign is still forbar.
Still use K1LSU for switching when linking. Hope this helps.

Yes I'm using DVAP Tool. Frequency is without any decimal points. I almost always connect straight to a reflector, direct.

The thing is it works for a while (varies). I'm able to connect to a reflector and transmit right away but after some time the dvap stops responding to my radios. I am still connected and can here any activity but the dvap is not picking up my transmission, don't get any lights on the dvap indicating that it is receiving my radio's signal. Software is up to date and everything works right for a bit so I'm led to believe its a hardware problem but I'm at a loss. I've tried it on other wifi networks with the same results so again I don't think its my internet connection.

Topic: 3275 Message: 3281

I have had this happen to me upon occasion with two different DVAPs. In most cases I have had to take the computer down to an unpowered state (in other words, shut down and restart, not just restart) in order to make the problem go away. I suspect its a voltage transient or something that causes it. In my case when this happens the DVAP stops responding both to RF transmissions (quick key to link or unlink) as well as to commands sent from the DVAPTool software. I cannot close the DVAP. So I exit the software and shut down, then turn the PC back on. This has happened twice on one DVAP (in 4 months) and once on the other (over 2 months). It has not become an issue for me.

I suspect that if you exited the program, removed the DVAP, and then reattached the DVAP and restarted the program that would probably work to clear the DVAP, but I've not done that because the PC gets all huffy about the disconnect. It was easier just to shut down and restart.

I doubt if there is anything seriously wrong with your DVAP, however, if you're running your DVAP and Raspberry Pi from the same USB-based adapter, that could produce the kind of transients. I have a DHAP and it has a voltage monitor on the outside so you can see what the Raspberry Pi/DVAP is getting. I have tried multiple different USB power supplies and about the best I can get is 4 watts when both are running. Every now and then it drops down to 3.9 and when that starts happening I go back on the 12 volt power source. But I suspect that when I have had the lock-up problem on the DVAP attached to the Pi, that this was the culprit.

Just my two cents, and probably overvalued by half.

Hi,

Not sure what your issue is here with the Rasp Pi and DVAP and iPhone 5s?

You need to make sure your Rasp Pi's Wireless Dongle is setup correctly with the password, etc... set in your 5S. You should be able to test all of this, with a screen or monitor.

I have used all of this in my setup here with an ICOM ID-880H and it works great.

I suspect your issue is that the setup is not done correctly therefore the Pi and 5S aren't taking to each other to make the connection.

Just had this issue with a new DVAP, read this thread and didn't see my solution, so I thought I'd share...

Configuration on my end. I have my call sign registered on the local gateway, my 440 node also registered as "B", then added the DVAP to my registration as "D".

In the DVAP Tool, I entered the Station Callsign as "K6PMG D". This resulted in the "connected, receive only" message after linking. I reconfigured the DVAP Tool by dropping the "D" suffix from the station call sign field and the "problem" was solved.

Hi Bill

All sorted now this initial connection to pi seemed to require the home router to be turned off
Nothing else on around after that all ok sorted .

The hotspot was fun with O2 i data bolt on was required took a while for them to get the requirement ?? It's a free add on with O2 though .

Thanks for reply

3290. Re: [DVAPDongle] Wifi hotspot with iPhone and pi

Yahoo group: DVAPDongle
Date: 2014-05-23 14:09:13 UTC
From: phoggberg@...
Topic: 3277 Message: 3290

Martin,
It is interesting that your Pi did not see a WifFi source lsuch as the iPhone, which would have been strong because it was close. Two things to make it better, update the firmware, and/or switch to a BT Connection to the iPhone. I haven't tried the latter, maybe I will I have a BT Dongle for experimenting, that I bought at a big box computer store for $10 so I might try that. I know that Apple really prefers the BT between the iPhone as a hotspot vs wifi. At least that is my interpretation of the text in the hotspot page on my iPhone5S.

My RASPI was purchased about a year ago, and who knows how long it sat upon the shelf before that. My DVAP acted inconsistently so I thought I would update the firmware, yes there is firmware updating on the Pi and you need to do this to get camera updates. Well I did that, and the DVAP has been running without any hiccups. It may not solve anything, or even make your system run worse so I am giving notice that YMMV! In order to make sure that your PI is running the latest software you need to do all of this not just run the firmware update program.

Please before you start read this entire post. I have tried to cover any problems you might encounter, but with LINUX this could be a whole book itself. You will be using some commands that are not in the usualy Pi vocabulary, so please read carefully. If you mess this up it is remotely possible you could brick your PI! if you do you are on your own, do so at your own risk! This worked for me, I can not guarantee that it will work for you.

Here is the sequence to upgrade the firmware on your Pi

sudo bash # get into administrator mode. # apt-get update # Do this as many times as it takes to not down load any files. If you get an error message saying some are not found run it again until it gets clean # apt-get upgrade -y # Do this until no additional software is updated/replaced # apt-get dist-upgrade -y # Do this until nothing else needs to be updated. # apt-get install ntp ntpdate curl -y # Just to make sure everything is tickyboo (see below) # ntpdate -s pool.ntp.org http://pool.ntp.org/ # this will sync your clock to NISTs Master Clock # date # Ensure that Date & time are correct before the next steps. Problems? refer to notes. # apt-get install ca-certificates # If you get a message about being manually installed, will be handled in next step # update-ca-certificates # This will ensure that your certs for https are up to date (this is a required step) # rpi-update # This will update the firmware. # reboot # this will set the firmware in your pi

Notes:
If you are in graphical mode you will need to open a console to enter the above commands in the menu under "other" you will find LXTERMINAL and if you look further down you will find ROOT Terminal if you pick LXTERMINAL you will have to enter sudo in front of many of the commands, unless you do a sudo bash or su -. -- See comments below Pick the root terminal. If you do you can skip entering step one, you are in system administration mode when you open it up. The Hash sign in front of the commands represent the operating system signaling its ready for another command. DO NOT enter the hash sign in front of the commands I just started using using a 7 inch HDMI Monitor hooked to the PI. Unfortunately the screen is almost unreadable. Increase the font size as follows for USA (Change settings as

appropriate for you): sudo dpkg-reconfigure console-setup use UTF-8 encoding Guess Optimal Character set use TerminusBold (Terminal US Bold) I use 14x28 (framebuffer only) use what suits you It starts booting with almost unreadable type but someplace in the boot sequence changes and is very readable for me. You are going to be entering a lot of commands that require privileged access. Typing sudo in front of each one is a pain. When I have some heavy maintenance I just get into root access mode for the maintenance period. The easy way to do that is type sudo bash[Enter] or su - (the latter require root password which probably is not set on the pi) If you choose not to do that just put sudo in front of all the commands above. rpi-update errored with: rpi-update: line 36: curl: command not found There is a problem with the latest release of wget and rpi-update so it uses curl the simple solution is install curl on your system (step 5) then rpi-update will also update itself If for some reason you don't want curl on your system we need to tell rpi-update not to try and get itself. Change line 10 to read # UPDATE_SELF=0 rpi-update which is why the UPDATE_SELF environment variable is set. for some reason my ntpd server was missing. For this process to work you need the pi to have the correct time. Test if you do by typing # date if the correct date/time does not appear enter run rpi-config and make sure the Timezone is set correctly in internationalization options If you change this reboot the pi and check the time again if the correct time still does not appear ps -aux | grep ntp and look for /usr/sbin/ntpd in the output if ntpd is running force an update with (I am using the North American Time servers, find a pool server nearest you sudo ntpdate -s pool.ntp.org if you get an program not found error load ntpdate with sudo apt-get install ntpdate -y if ntpd is not listed in the output load the software with sudo apt-get install ntp ntpdate -y Then reboot the clock on the Pi is notorious for drifting. If you power it up every time you use it, that is not a problem. If you leave it running, you may want to make a crontab entry using the ntpdate command once each day.
NOTEBENE:
If you encounter a problem with this procedure check my notes above to see if it is addressed there. If it is not addressed by my notes and you have a solution, by all means post it to this group! If it is not do not post the solve my error to this group do not email me. The realm of errors that can crop up on an infinitely configureable LINUX System is vast and deep, and depends on how you have set yours pi up. DONT BE LAZY. If you don't know something about the Pi not directly connected with the DVAP or DSTAR and encounter an error there are groups to address this. This is not one of them! Google the error message with Raspberry Pi or Raspian or Debian in the search string to find solutions. I ran into some problems but they are addressed above so you shouldn't encounter any.

This worked for me, You can try it, but realize it is not a mandatory fix. You take full responsibility and liability for using it.

3292. DVAP RX Power?

Yahoo group: DVAPDongle
Date: 2014-05-26 19:54:38 UTC
From: vspeeds@...
Topic: 3292 Message: 3292

I originally purchased the DVAP to work with my ID51 handheld and raspberry pi hotspot and I set the HT to the lowest transmit power setting. This set up works great. I since bought the new ID5100.

My question is would the lowest transmit power setting of 5 watts on the ID5100 damage the DVAP? And even more so, if I forget to adjust the transmitting power on the ID5100 and transmit to the DVAP in either the 15, or 50 watt settings, would these settings damage the DVAP? The distance between both antennas would vary from 5 feet to 50 feet.

Thanks in advance for your replies.

It shouldn’t damage it. Many people have used their 50 watt mobiles to talk 5 ft to the DVAP on the inside of the vehicle.

I suspect that the biggest issue would be how the PI reacts to 50 watts of RF floating around it.

Bill,

It’s pretty easy, and a bunch of different ways to do it. Regrettably, “read the manual” is probably the best answer.

Turn to VFO mode, change frequency with dials, set DV
Dependent upon some settings, just transmit, the repeater should respond and with some of the auto functions turned on, will set the RPT1, RPT2, and UR fields. If not, try the RX-CS button, and if all else fails, just go into the Callsign section and enter/change what’s in there for the repeater.

I’ve done it a number of times, it generally takes less time to do than to explain.
Practice is your friend.

3295. Re: Can't get software to run in Ubuntu 14.04

Date: 2014-05-28 03:43:36 UTC
From: Donald Karon
Topic: 3295 Message: 3295

I had the DVAP running fine on this computer. It was initially installed under 12.04. The computer was upgraded to 14.04 and it still ran w/o problems. Over the weekend I had to re-install 14.04, this time as a fresh install, not an upgrade.

I re-installed the DVAP software but it won't run. One potential source of problem: the package ia32-libs no longer exists, it's been dropped from Ubuntu 14.04.

Checking permissions I think all is well there but either the software simply does not start or I am told that the file does not exist, even though it does.

Anyone have advice about this?

I have a dvap, when I installed the 1.07 firmware the serial number is now AP&&&&& they look like ascii hearts or something. However the serial number on the plastic box reads AP0311xx. I am leaving the last two digits out for security, how do I fix this?

Hi (didn't get your name).

As I've mentioned here before, you should NEVER try to upgrade the firmware unless told to do so. The firmware has not been in the downloads section for a while so you must have downloaded it from another site. That is also something you should NEVER do.

If you send a direct email, I'll give you instructions for returning your unit for repair.

Topic: 3296 Message: 3299

I had something similar occur. It turned out that there were power-saving settings on my laptop that shut down idle USB ports. The laptop saw the USB connected to the DVAP as idle and closed the port. I had to edit a configuration file (the laptop runs Ubuntu) to fix this. I believe there is something similar in Windows.

Hope this helps.

3300. Will DVAP transmit DPRS data?

Yahoo group: DVAPDongle
Date: 2014-06-05 13:50:18 UTC
From: aldewitt@...
Topic: 3300 Message: 3300

Yesterday I drove from Jefferson City, MO to Auburn, AL. There are repeaters in St. Louis, Tupelo, Birmingham and Auburn. The rest of the time I worked through a DVAP/WI-Fi hotspot combo with generally good audio results so long as the Sprint company provided a decent Wi-Fi signal. FWIW, the Tupelo repeaters are still down from the storm apparently.

During contacts with other users who were using either 880s or 5100s, I got the quick pop up on my radio with the GPS information and distance to their radio. But when I checked today during the entire time that I was on the DVAP I did not get an APRS track, in spite of having multiple QSOs during this eight hour window.

So, I am wondering, will the DVAP transmit the DPRS data?

I usually go to 30C when I am on the road because I can always count on talking to people. Since I do that, I am just wondering if I am eliminating my APRS data by going through the repeater, and if I would be better off linking directly to a repeater via DVAP.

I know that somewhere on this list is someone who knows the answer to this. I'd really appreciate a heads up.

AD0DQ -- Tony

From: rds@...
Topic: 3304 Message: 3304

Hi,

I'm new here in this group. My name is Rolf / DO1ZZ and I'm new with D-Star too.
Hopefully I'm right here with my problem.

I got few weeks ago a new ICOM IC 7100 for the car mainly working mobile on 10m and 15m.
In the meantime I can also work with D-Star with this transceiver.

2 or 3 weeks ago I bought a used ICOM ID51 together with a red (2m) DVAP Dongle.
I tought it would be a good idea to build with the Raspberry, the dongle, a mobile powerbank
and with my Iphone a mobile or portable access point for D-Star for the areas where no repeater is available.

Reading a lot of articles out of the Internet actually I'm more confused than at the beginning.

The actual situation is, that I downloaded the file from westerndstar.co.uk, expanded the file and wrote it with image writer to a new SD card. The systems boots - so no problem at all.

I found a nice article from Mark Simon - WD9JEN in the Internet, together with this article and the screenshots it tried to setup my Raspberry and the dongle and the ID51 as well.

Unfortunately the program version seems to be actually different as of the date of the guide (dec. 2012) with additional fields etc.

It believe that I make some mistakes with my settings so I have no chance to connect. I can see on the monitor that something happened pressing the mic buttom at the ID51 but it seems it is wrong.

Perhaps someone can provide me with an actual step by step setup or a link to an actual step by step guide or whatever.

I'm registered at D-Star, the wlan works without any problem, the Raspberry is running without any problem, the program starts, I can see the 2 screens with the respective information etc. - there is "only" a wrong setting.

I have worked on this now 2 days with a lot of effort but unfortunately with no result.

So any comment could be helpful and is much appreciated.

Many thanks in advance.

You have registered an "A" terminal during your registration process. As a result, you need to use an "A" in the 8th character of the mycall field in order to transmit. If you'd like to just use a space there, you will need to follow the instructions as shown at http://www.dstargateway.org http://www.dstargateway.org for adding a space terminal.

3309. DVAP dongle and raspberry

Yahoo group: DVAPDongle
Date: 2014-06-09 12:06:14 UTC
From: rds@...
Topic: 3309 Message: 3309

Hi,

my name is Rolf and I'm new here in this group.

Yesterday I wrote a new post but it seems it was not published. So I will try it again and will make it a little bit shorter.

I will use the red dongle (2m) with my raspberry as a mobile access point for D-Star. Downloaded from westerndstar.co.uk the software, expanded it and wrote an image file on the SD Card. The rasp will boot without any problems and I can see the 2 programs at the monitor.

Unfortunately I can't connect. Wlan works very well, software and raspberry runs, ID51 is ok, registered at D-Star several weeks ago and can work from my car with IC-7100 without any problem.

I downloaded the guide from Mark Simon - WD9JEN and tried to do the setting step by step he explained within his quide. It seems that I have a newer software version because there are few additional fields actually.

I tried it a whole day without any success. I'm very sure that it is a mistake in my settings at the ID51 or in the software but in don't know where. I can see on the monitor hitting the transmit buttom of the ID51 that something will happened but as explained I will get no return etc.

Perhaps anyone can help me with a link to a guide for a step by step setup with the actual software version or whatever to solve my problems. I have read elsewhere that there is a problem with the DVAP dongle and ircDDBGateways due to some limitations of the programmer and the rights holder. Maybe this is a additional problem too.

Every input is very much appreciated.

Many thanks in advance.

If it didn’t work with just the callsign, you need to follow Robin’s instructions and register your callsign without a suffix by adding a “space” terminal to your existing registration. Thousands of Dongles are working just fine.

Just don’t use the A suffix, just your call. It works perfectly without it and the A causes confusion. It was suggested for another purpose, but is not necessary. All should be happy without it.

From: Woodrick, Ed
Topic: 3306 Message: 3318

First, registration is not required to use a D-STAR radio. It's very possible that you could have been talking through a repeater for years and never had (or never had a correct) terminal registered.

Registration is only needed if you are trying to link a repeater, call sign route, or to connect to D-STAR via the Internet. While there was mention in the past of the utility of having an "A" terminal, it's only for specific situations and not generally recommended, specifically for the problem that you are having.

If you have registered only an "A" terminal, then to perform any of the functions that require linking, you must include the A in the 7th position of your call sign. If you have the space registered as a terminal (as per Robin's document at the link that he provided) then you do not need to put anything but your call sign in the call sign field.

As a professional, you should have done a search on the forum and found that this issue has been covered many times in the past. Many times. The "fix" is simple, add an "A" to the call sign or add a space terminal.

It's definitely not worth a dozen email and all of the irritation that it seems to have caused.

Hi john
Sorry to hear you have had some many issues I was frustrated at first but once the penny dropped it was pretty cool .
Yeah the A confused me a bit on gateway registration I just deleted and hit the space bar voila sorted .

Regarding the dvap it's an amazing bit of kit I can connect via PC at home or mobile using pi and id51 mobile it's a totally new world of friendly people and very helpful as well .

Basis commands and I am no expert 8 symbol in memory u unlink, repeater calling plus node c 2 metre or b 70 cm them L 8th position there's even ccs calls dtmf that allow direct connection to another amateur it's pretty cool stuff .

Robin has a good bit of kit here that allows many people from anywhere with internet connection either wifi and 3 g or 4 g to chat away keep plodding away asking questions we are here to help ! I asked people and many kind people gave me advice emails files examples even icf files that you can edit and use on your radio .DSTAR is probably the most chatty and friendly experience I have had on amateur radio so far .

Regards 2E0SPG

3320. Re: Can't get software to run in Ubuntu 14.04

Yahoo group: DVAPDongle
Date: 2014-06-11 05:03:13 UTC
From: don.karon@...
Topic: 3295 Message: 3320

More about this problem of mine: I checked all the file permissions (from another computer that successfully runs DVAPTool), file names, file sizes, dates, etc., and they were correct.

I am pretty certain DVAPTool doesn't run in 14.04 because of missing 32 bit libraries. The old package that handled this has been “deprecated”, i.e., is no longer available.

Supposedly, for 14.04 the new way to install 32 bit support is to run these three commands in a terminal session:

```
sudo dpkg --add-architecture i386
sudo apt-get update
sudo apt-get install libc6:i386 libncurses5:i386 libstdc++6:i386
```

I ran them, rebooted, but still get this error message when I try to run DVAPTool:

```
./DVAPTool: error while loading shared libraries: libgthread-2.0.so.0: cannot open shared object file: No such file or directory
```

The problem is not solved. I think it traces back to incomplete 32 bit support in the newest version of Ubuntu 14.04 64 bit. I am continuing to work on this, will post again if I solve it.

3324. Re: [DVAPDongle] DVAP Dongle and Raspberry PI

Yahoo group: DVAPDongle
Date: 2014-06-12 07:18:58 UTC
From: martin hennessey
Topic: 3304 Message: 3324

Hi Rolf that's a pain I just went with the explanation off the programming I suppose is a bit tough to capture on screen .
I found the most crucial bit was the call sign and gateway both with callsign in caps and the node letter for 2 metre dongle and c for 70 cm B .
Tell him to keep plodding away ,one word of advice when he does get it going make a second image with back up card just in case .

Regards

From: WB5UGC
Topic: 3306 Message: 3325

Eight years ago the one thing I remember s to forget every thing you know about networking. Its was the D-star 101 class in about 2005 or 2006. At that time the USA had only three dstar repeaters in operation.

Sent from my iPad

On Jun 10, 2014, at 4:43 PM, "'Woodrick, Ed' ewoodrick@... [DVAPDongle]"<DVAPDongle@yahoogroups.com> wrote:

> First, registration is not required to use a D-STAR radio. It's very possible that you could have been talking through a repeater for years and never had (or never had a correct) terminal registered.
>
>
>
> Registration is only needed if you are trying to link a repeater, call sign route, or to connect to D-STAR via the Internet. While there was mention in the past of the utility of having an "A" terminal, it's only for specific situations and not generally recommended, specifically for the problem that you are having.
>
>
>
> If you have registered only an "A" terminal, then to perform any of the functions that require linking, you must include the A in the 7th position of your call sign. If you have the space registered as a terminal (as per Robin's document at the link that he provided) then you do not need to put anything but your call sign in the call sign field.
>
>
>
> As a professional, you should have done a search on the forum and found that this issue has been covered many times in the past. Many times. The "fix" is simple, add an "A" to the call sign or add a space terminal.

> I am a professional DBA and I have worked with Oracle/UNIX. I am accustomed to better documentation. I am going to check this situation tonight as the user is not able to confirm "MYCALL". Yes, he is a bit challenged. I believe that I am in accordance with the instructions. It may be that the dvap dongle will just "Start Working" as others have reported. Otherwise, I am going to photograph the HT, take screen shots and advise the user to send it back for credit. Guys, use some screen shots and stop referring to "terminal" as "registration". We have been "registered" dstar users for months. this is not about registration, it is about terminals. i am going back to my HF contesting. I've had enough of this madness.

>
> KJ4JTQ, Eddy Plummer, we WERE friends before this dongle affair. I had QSO after I created the terminal so obviously he was wrong. this is what I have to work with. KK4QKL has no idea what mycall is. I am an HF contester, CW/RTTY. The only use I have for VHF/UHF is the RACES nets and events as i am member of RACES. I would have no use for the dongle or even that concept, but I am trying to help my friend who is bit challenged with computers. I've been dealing with UNIX and Windows servers for 25 years. I am used to better documentation that what I see. KK4QKL is going to Europe and he would like to talk to his friends in Miami over DStar while he is away. I"m going connect by Skype with him tomorrow to verify the A in mycall, however, as I have said before, without the A in my call, the

dongle won't connect at all, doesn't recognize the radio. with the A connects Receive Only

>
>
>
> On Mon, Jun 9, 2014 at 11:18 AM, John Dalnes <satguruboy@...> wrote:
>
> I don't have the equipment in front of me, but I seem to remember that when I transmitted KK4QKL (no A) the dongle would not connect (receive only). With the A, the dongle would connect but Receive Only. I will confirm that. This A business is all based on YOUR instructions on your website. I believe there is a problem with DStar connecting the dongle to the W4NVU gateway. Most likely the dongle is connecting to some DStar backbone server and that server is not connecting to the W4NVU. One fellow on the forum remarked that his unit started working 48 hours for no reason, that's definitely a network "plumbing" issue. Hopefully our issue will "magically" disappear as well.

3327. Dongle gone deaf & dumb

Yahoo group: DVAPDongle
Date: 2014-06-20 19:51:57 UTC
From: adamc1999@...
Topic: 3327 Message: 3327

I first had my dvap dongle connected and working on window7 running on a netbook

I then decided to use it on my Mac ruining Mavericks

I followed the driver installation instruction, and installed the dvtool app as well as selected the no-nap option for the app.

Everything starts up, I can access the dongle, but it will not respond to the radio command anymore. I can see it is receiving my signal as the rf meter on the app goes full scale.

Now when I hook it up to the existing windows7 install it is no longer working, but playing deaf & dumb like it was on the mac.

Is there something that perhaps needs to be reset?

If I am not mistaken, you do not put anything in rpt1 or rpt2. Also try using dup- or + with a zero offset. And also try just simplex.

I would get the RT Systems software and use it to program your 5100.

The RT Systems software has a specific tool in the D-Star calculator that sets up the 5100 for a DVAP and allows you to program a host of repeaters and reflectors.

Others may have different advice, but that’s what I do.

From: youha@...
Topic: 3347 Message: 3347

When I acquired a DVAP a few years ago, both 2 meter and 70cm it worked perfectly. I was under the registration of K6MDD which has since gone black. I am re-registered via W6CX, following the latest instructions, and with a lot of playing around with registration update, I am still in a receive only status. I tried with the A...no A following the call sign on the DVAP app...no difference. I entered the required info in that chart section of the registration process as well. I guess it is correct. I have a screen capture of my registration page if need to assist to find out what is going on.

3354. Serial Number apparently corrupted after firmware upgrade

Yahoo group: DVAPDongle
Date: 2014-07-11 14:47:46 UTC
From: wb4ult@...
Topic: 3354 Message: 3354

I was trying to do a firmware upgrade to my DVAP and it appears I corrupted the serial number. The dialog box says "It looks like the USB is connected to a device other than a DVAP" and the serial number field does not start with "AP" as my other one does. If I try a "connect" it says "gateway unknown"

Is there a fix? I can send some screen shots of the dialog boxes if needed.

Hi Rick. You should NEVER update the firmware without being told to do so. You should NEVER use firmware that isn't on the official site.

Also, you should ALWAYS check this forum before doing something like that. It has been discussed here several times before.

As far as I know, there is not an App Nap feature on any release prior to Mavericks. You might check your Energy Saver settings in system preferences. It could be that the computer is going to sleep. Prior to Mavericks, I moved my computer sleep settings to Never.

Also, I have now been running Mavericks since the day it was released. Other than figuring out the "App Nap" setting for the DVAP, I have not experienced any problems attributed to Mavericks. The company I work for does almost all of their software development on Mac. All of them are running on Mavericks and I have not heard any complaints. So, it's been out for a while now, it might be safe to upgrade now if you have any desire to do so. If not, there certainly nothing wrong with what you are running.

Your DVAP may be slightly off frequency. Try changing your radio up/down 5/10 kHz while keeping the frequency in DVAPTool unchanged. Then key up and see if it notices your commands. If so, there is a simple utility in the downloads section (DVAP Util) that you can use to adjust the frequency.

Just got the ID-51A programmed with RT Systems software and cable, using the D-STAR Calc.

Included and selected REF030C and can hear stations, but apparently I am not being heard. I tried the recording function, so I believe the DVAP is passing audio. I have called CQ and called stations I heard after they cleared from QSO's, but am getting nowhere.

I also loaded a bunch of D-STAR repeaters, and am hearing no "tail" after I un-key the mic after calling CQ.

Is there something simple that I am missing? Any ideas and help for this newbie are very much appreciated.

Are you sure that you are registered correctly?

I am not an expert, but I went to this page

http://query.ke5bms.com/index.php

put in your call sign and do not see any terminals registered.

You could also go here: http://ref030.dstargateway.org/

while you're operating and see if your call sign shows up.

I could be wrong, and if so, someone will surely correct me.

Good luck to you in getting everything working smoothly.

Hi Jerry,

When you log on to a reflector I think you are in receive only mode.

If you check your D-Star registration you will see you need to complete the registration process.

Go back to K2BWK and follow the screen prompts to complete.

Good luck

This not a tail that you will hear. If you watch the signal meter, you may or may not see a see a carrier stays up for a second after your transmission. What you usually see is the repeater ID on the data line of your radio after you unkey. In some cases, you may hear a beep on your radio after a transmission. This is not a courtest tone from the repeater, but one generated by your radio. You maynot hear a tone with every transmission.

Log back into the repeater where you registered and add a “space” terminal according to the instructions on the document at www.dstargateway.org<http://www.dstargateway.org>. Until you add a terminal, your registration is not complete. Also, make sure your callsign is entered into the MY or MYCALL field in your radio.

I checked the ref030 page and my call is not listed there; maybe there is a long delay (similar to that of Yahoo! Groups) before it will appear. I completed the registration (added the space in the box and added the pcname (cw2txb-dvap), then saved it. The registration site showed that it was confirmed. Still not working, unless there is a substantial delay between completion of registration and when it actually allows connections.

Since my last post your call is now registered ok. It does take a little while for your call to populate.

When you no longer get the receive only mode message you will be good to go, and will see your call on the system.

Don't forget to switch your rpt2 (to field) to cqcqcq after connecting to the reflector otherwise you will get the message that you are already connected.

Sorry if this post crosses with other answers

Enjoy

I see you added a terminal. By “space”, it means to just hit the space bar to add a space in that box. You entered a valid PC-name. If you entered something else in the box for the space, delete that terminal and add one with just the “space”. Then enter you callsign with no extra characters in the DVAP software. That should get you going. It may take a couple of hours to sync with gateways around the world, but you should be good then.

Dave,

Whoever told you to put CQCQCQ in the RPT2 field was wrong. CQCQCQ belongs in the UR field. Since you are using an ID-51 and assuming you have your DVAP frequency in either the VFO or a memory, do a long press on the CS key. This will show you what is currently in UR, R1, R2 and MY. W2TXB should be in MY. If CQCQCQ is not already in UR, short press CS to bring up a list you can select to put into UR. CQCQCQ should be first on the list. Press the blue enter button to select it. You will go back to the previous screen and CQCQCQ should now show in UR. You can key up and it should work.

Roland,

Thank you for the assist here as well. This site is a great source of information, especially for those of use who are learning a new mode. Much of this time I thought the problem was in the DVAP and its programming, but it turned out to be in the programming of the radio to properly Link and Unlink and then Talk.

You were my second D-Star QSO on Ref030C, and sounded great, as did Rick (K3RIC). Now that I am seeing how this works, it all makes more sense... there definitely is a method to the madness. ;)

Many thanks again to all here for the help with getting me on the air.

Unable to connect to to Rasberry LAN port to configure DVAP. I only get red led on Rasberry, not sure if software is running on Pi. I have tried different disk images, but I am wondering if they are only for the B board and not the B+. Anxious to get going and definitiley not a Linux guru. Anyone else experiencing B+ issues? Any patches or configs to B+ to resolve my issue?

Thanks..... Burl, AJ9Q

Jery:
What radio do you have? It’s the UR you change to CQCQCQ. I vaguely remember you have an ID-51A. Go to www.dstarinfo.com<http://www.dstarinfo.com> and there is a quick guide to the ID-51A.

I have a Pi B+ and if you are only getting the red power light then the image is not booting. I have found my image works fine in the Pi B but when I took the micro card out of its holder and stuck it in the B+ it would not boot. I put it back in its holder and it booter on the B Pi.

I burned another image to another card and it booted on the B and B+ pi.

Seems that the B+ is a little tempermental. Both cards were new Sandisk Ultra 16GB class 10 cards

Regards,

Tom, n8gy

The Model B+ has a new chip handling the ethernet and USB ports, so you need a recent kernel and some updated firmware.

Perform "apt-get update" and "apt-get upgrade" and you should be good to go with the B+. Might want to back up the SD card first.

Hi Jerry,

Sounds like you have it all figured out now. So to recap in the 'to' field just hook up to the reflector of your choice first, then change to cqcqcq for the rest of the session. Then 'U' to unlink when your finally all done.

If your using the ID-51 the Rpt2 field is the 'To' field not the 'from' and all the basic settings are in the memory already.

There seems to be some confusion. The UR field is the TO field on the 31/51/5100/7100. The FROM field is a combination of the RPT1and RPT2. You can see this in the programming software.

Thanks for the correction John, my mistake.

Jerry, the cqcqcq or reflector choice will be in the UR field when you program the 'To' field with your memory content on the ID-51.

Holding down the 'CS' button for a second or two will show your settings.

Hi. Try doing an echo test for 30 or more seconds ("DVAP___E" in urcall where there are 3 spaces between DVAP and E). That will tell you if the issue is with the DVAP or not.

Make sure you are on the lowest power setting on your radio.

Topic: 3401 Message: 3404

My DVAP/Macbook combination works well at home and at vacation QTH, both of which have cable service, but when I take the same equipment to our summer house which has Fairpoint DSL, it doesn’t work. Fairpoint took over from Verizon in this part of the country. What is really puzzling is that it will work sometimes, but rarely.

From: herrinb@...
Topic: 3405 Message: 3405

I have run into a problem with an ID 51A that has several experts scratching their heads. Long story short - two different ID 51As. One works well in all functions, including manipulating, listening to and talking over a DVAP. Another from a different purchase does all the above but won't talk over the DVAP. Two identical radios, both set up exactly the same way (I used RT Systems software to make both radios identical).. I also used two different DVAPS, one 2M and the other 70 cm. Same issue. Has anyone experienced this? Anyone have any solutions?I did a full reset on the questionable radio before programming it to match my original radio.Software operating the DVAP is unlocked (not exclusive to the call sign entered into the software).I'm scratching my head!Thanks!BobKE4JLL

Make sure you have a _ _ (space) in your call sign on your DVAP software. Check your gateway and make sure it is the same. I had the same problem with my IC-5100/ID-7100 (kinda went crazy and got both radios), after I added the space in my call on the DV tools screen all was well.

No it will not work. I try it just for _ _ _ _ s and giggles. No luck. Must have a D-Star radio. If you buy the blue dongle don’t need a radio. I would suggest using the DVAP, (red dongle) and picking up a little Icom HT that has D-Star. I think they have a special on one of those now as a close out.

73’s and good luck

What is a DHAP? If you are using the DVAP (Red Dongle), when you hit the “Close Button” on the software, the frequency window should be highlighted and you should be able to change it to what you want. I am using 441.0000 which was the simplex frequency programed into my 7100/5100 radios. Since it only puts out 10mw, I just use that frequency. Are you using DV_Tool 1.04?

Good Luck

Hi Sean. Please read the DVAP usage instructions Using the DVAP http://www.dvapdongle.com/Using_the_DVAP.html where is shows the frequency should be entered in Hz. Your example would be 441000000.
73,
Robin
AA4RC

Using the DVAP http://www.dvapdongle.com/Using_the_DVAP.html Enter the following values in the URCALL field on your radio: "DVAP I" (request voice ID from the DVAP) "DVAP E" (key down and speak for echo test)

Try adding a few more 0 (zeroes) at the end. For example, 441.00000, there should be 5 zeroes after the dot.

From: Barry
Topic: 3405 Message: 3425

Hi Joe,

I’ve used two different methods, both of which work.

In the RPT1 field you need to type the callsign of your DVAP.

From: DVAPDongle@yahoogroups.com [mailto:DVAPDongle@yahoogroups.com]
Sent: Thursday, 14 August 2014 1:48 AM
To: DVAPDongle@yahoogroups.com
Subject: Re: [DVAPDongle] ID 51A and DVAP communication problem

I'm having the same problem with my 51A. Just to be sure, what are the correct values? There is nothing in my RPT1 or RPT2.

hanks,Remember, your entry must have 8 characters. Your callsign KN4JH has 5 characters. Therefore, enter your callsign, then two spaces, and then type either “b” if you have a UHF dongle or “c” if you have a 2 metres dongle. In the Rpt2 field, do the same, except type a “G” instead of the “B” or “C”. Of course don’t type the quotation marks.

I have also got mine working in each of the fields, instead of my callsign, typing DVAP followed by 3 spaces and then the 8th character just the same as my previous examples. So if you have a 440 mhz dongle, you could type dvap b and dvap g.

The final character must go in the 8th place otherwise it won’t work.

I hope this helps.

Barry VK6SP.

3428. Proper DVAP Commands

Yahoo group: DVAPDongle
Date: 2014-08-24 00:13:29 UTC
From: wd6fox@...
Topic: 3428 Message: 3428

Hello All!
I need some clarification for my DVAP's (UHF & VHF) that I have mounted in my DHAP, and the proper way to program my ICOM IC-92AD

For the Reflectors I have (3) Memories fir each reflector;
1) REF012AL - Used to link to the reflector - In the "Your Callsign" I have REF012AL and DIRECT in the RPT-& RPT-2
2) REF012UL - Used to Unlink - In the "Your Callsign" I have REF012uL and DIRECT in the RPT-& RPT-2
3) The 3rd channel I use to talk - In the "Your Callsign" I have CQCQCQ and "DIRECT" in the RPT-1 & RPT-2

My question is, that the correct commands to place in the Your Callsign, and RPT-1 & RPT-2 Colums?

I see other commands in other code plugs, is that correct?

Also if I want to connect to a D-star repeater, does it have to be gateway compatable to connect?

Thank & 73's
Sean Fox

You don't need #2... you only need one memory with U in the 8th position. This will act as a "universal" unlink command for whatever it is being sent to. This way you only "need" to have memories for the link commands, and the Unlink is universal.
When dealing with a dvap, all RPT fields are DIRECT

I do believe any repeater you connect to via the DVAP will need to be gateway compatible, since you're connecting directly to it via the internet (through the DVAP).

Yahoo group: DVAPDongle
Date: 2014-08-24 12:00:08 UTC
From: Brad Kellison
Topic: 3428 Message: 3431

#1 is correct

#2 is not correct. The correct way to UNLINK is to only put the letter U in the 8th character spot. No other characters in the unlink line but the letter U.

The rest is correct/

To connect to a repeater it as to have a gateway or internet connection to connect with the DVAP unless you are close enough to it to connect with the radio itself

3439. DVAPTool Not responding to radio

Yahoo group: DVAPDongle
Date: 2014-09-06 14:42:32 UTC
From: wy7btb@...
Topic: 3439 Message: 3439

I have a 70cm DVAP connected to a Windows 8 laptop. The driver seemed to install correctly and the DVTool shows that it hears the RF. But it doesn't respond to any of the commands or even the CQ. I have tried everything including reinstalling the driver and even running it on a mac. All of the system logs seem ok, I don't get any error messages. As far as the radio it is an ID51 my call is set correctly and I am in simplex DV with the same frequency as the DVAP. All I'm getting on the DVAP is a slow blinking blue light when it is open and I get a slow green light when it isn't.

Thanks,
Bill WY7BTB

3440. Re: DVAPTool Not responding to radio

Yahoo group: DVAPDongle
Date: 2014-09-06 23:55:46 UTC
From: aa4rc@...
Topic: 3439 Message: 3440

Hi Bill.

Your DVAP may be slightly off frequency. Try changing the frequency of your ID51 up 1 kHz at a time (while keeping your DVAPTool frequency fixed on the original frequency). If it doesn't start responding by 5 kHz up, try going down 1 kHz at a time from the original frequency until it starts responding.

If you find the frequency high or low, you can use the DVAP Utility from the downloads page on www.dvapdongle.com http://www.dvapdongle.com to re-center your DVAP. When it is running and you have connected and started, key up your radio to see the spectrum on the display. Then use the calibration arrows to move the frequency until it is centered.

If you have problems with it, send an email to support@dvapdongle.com and I'll walk you through it.

73,
Robin

Topic: 3442 Message: 3442

i have an older i-mac that i upgraded to OS X 10.9 (bad idea). the dvap froze after a few minutes. after some research i found that i had to disable app nap by the get info function in reference to the dvap.

fast forward, i just bought a mac book pro, same problem. however.....when i use get info to disable app nap, there is no disable app nap block in the get info box. the i-mac and the mac book pro are both running 10.9.4 but yet i have no disable app nap on the mac book pro, i guess it might be because it is a laptop and apple wants to insure long battery life. i have read in a forum where there is a temporary fix via a command text entry but you have to do it after every re-boot.

bottom line, does anyone know how to permanently disable app nap on a mac book pro when running the dvap?

many thanks,

ben

Paul -

thanks for your comments, i purchased the mac book a couple of weeks ago, i don't know if the fact it is a new model has anything to do with my problem. i select the dvap and get info and find no box for the app nap. on my older i-mac (same os) i do the same commands and there is a box in the get info menu for disabling app nap.

as you said i'm probably just missing something.

thanks again for your post.

I am sitting here kicking myself in the head!

I have an unlink for every repeater. And yet, if I had simply analyzed it, I would have recognized as you so eloquently put it, that the unlink command is universal and will unlink anything.

Thanks for pointing out what I had been way too stupid to see!

Greetings All from Perth, Australia

I have just purchased a DVAP dongle and have just finished setting it up.
Thought I would just pop my head in and say hello.

I have been doing some reading on this group and a big thank you to those who contribute.
Reading some of the conversations have made the setting up process an easy one.

I look forward to contributing where I can.

One question I do wish to ask:

Does anyone know how to set up an IC2820 into cross band repeater mode on DV??

I assume it is possible and as I have bought the DVAP to create a hotspot for Perth D-Star users using the UHF DVAP unit I have here and using the 2820 to cross band repeat out on 2m.
I hope it is possible. Any hints would be greatly appreciated.

regards

Topic: 174 Message: 3453

Hi Jeff,

Give this a try:

IC-2820H Setup

1. Set the Left Side to 2 Meter and Right Side to 440MHz

2. Under DV SET MODE in the menu, set Digital Monitor to AUTO

3. Set the repeater frequency up with the proper offset on the appropriate band side and select that as MAIN

4. Set the non-MAIN band to a simplex channel

5. To enable Crossband Repeat, perform the following:

1. Set both bands’ mode to FM

2. Hold both band knobs then push and hold F key until the radio beeps.

(Push AND Hold Both RIGHT and LEFT Band Knobs until you hear a BEEP

WHILE STILL HOLDING KNOBS, Press the "F" button (between the right vol/sql knob and band knob)

until it BEEPS and you see the "Skeleton Key" Icon Flash on the upper right side of the display)

3. The Lock symbol will flash to indicate crossband mode.

4. To exit crossband mode, push and hold the F key until the radio beeps and/or key icon

(in upper right corner of display) disappear

Other Radio (or Handheld) Setup

1. Set the radio to the 2820's non-MAIN frequency

2. Turn on DUP mode (can be either + or -) and set the offset to 0.000 MHz.

The radio will transmit and receive but stay on the same frequency.

3. Set the radio to DV mode

4. Set up the D-STAR callsign parameters as though it were a regular repeater.

(UR=CQCQCQ, RPT1={RepeaterPortB}, RPT2={RepeaterPortG},MY={Your Call Sign}

Jeff,
I haven't tried it, but check out this posting on the IC-2820H Yahoo Group:

Icom IC-2820H https://groups.yahoo.com/neo/groups/Icom_IC-2820H/conversations/topics/1840

There were some that said it couldn't be done, but others said it worked.
You can probably search the conversations within that group for more.

Also check out:
D-Star Cross Band Repeater
http://ki6mpa.wordpress.com/2011/04/14/d-star-cross-band-repeater/
and
Cross Band http://ak6ak.net/Info/CrossBand.html

See if any of those sites help at all.
I had saved these links, but again haven't tried them out.

Hi, Group,

I hope someone can help:
I re-installed Win 7 on my shack PC a couple months ago. Before the install, my DVAP Tool worked flawlessly.

I repeated the same steps to re-install the DVAP tool as I did initially, but this time I kept getting an error window in the DVAP tool stating that the DVAP couldn't be found.

The green light on the DVAP was flashing properly and the Windows device control panel showed the DVAP with updated drivers and working.

After trying to troubleshoot for a day, I decided just to completely re-install Win 7 as I loved using the DVAP.

After formatting and re-installing the OS a second time, I did all of the steps to re-install the DVAP tool as well.

Still got the same message window in the tool stating that the DVAP couldn't be found. I did a lot of searching through this list and found that Bonjour drivers mights help, so I installed them as well. Still the DVAP couldn't be found by the DVAP tool.

I found it so frustrating that I just put aside my D-Star stuff and haven't touched it for a couple of months. Today, I realized how much I missed logging into nets and decided to give it a third go. Still having no luck.

I've attached a screen grab from the DVAP tool and dialog window. Does anyone have any ideas how to remedy this? I miss my D-Star! :)

Cheers,
Thomas

Hi Jeff,

As I understand it doing DV crossband would require two DVSI AMBE chips, or maybe a duplex version of the chip.

Anyway, glad it is working.

From: Tom Witherspoon
Topic: 3456 Message: 3460

As means of an update (I actually posted the message yesterday, but it must

have been held in moderation) it is now working for the most part. I
changed one Windows setting which allowed for auto (not manual) updates.
After that, the DVAP loaded and actually connected.

The DVAP tool doesn't always understand the command to disconnect from a
reflector and there are other quirks, but at least it's workable now. I can
manually close the port if it doesn't disconnect.

Cheers,
Thomas

Luther and all,

I created the same DR settings as yours for my DVAP and it works fine in order to access reflectors.

However, it didn't work well with repeaters. I tried to put a repeater in the "To" field but I cannot select the "Gateway CQ" menu.

Any suggestions will be appreciated.

Best,

Taka 7K1BIB

I heard Robin talk about this at Dayton, I think, and what he said was that Apple wants a piece of anything you put on the iPad or iPhone, and for that reason, that it was both unprofitable and unworkable to design for that operating system. That’s why I got a Galaxy tablet (I use it for nothing else but my 5100) because I believe the time may come when the DVAP will work with the Galaxy and Android systems, but that it is unlikely given Apple’s “engulf and devour” strategy that an app will come out that marries the DVAP and the IPAD.

Sad, but greed has a price.

1.

8. Download the DVAPTool application file using a web browser by enteringhttp://www.dvapdongle.com/downloads/DVAPToolInstaller.exeand run it to start the install wizard.

1.

‣9. You are ready to go to the Using the DVAP page listed at the top of this page. If you receive a missing library notification when you run DVAPTool, download the Bonjour installer from

http://support.apple.com/kb/DL999

Installing on Mac OS X Leopard or later

1.

‣The DVTool application will only run on an Intel based Mac running Leopard or later. Install FTDI drivers fromhttp://www.ftdichip.com/Drivers/VCP.htmprior to connecting the DV Access Point Dongle. Once installed, plug in the DV Access Point Dongle and download the DVAPTool archive athttp://www.dvapdongle.com/downloads/DVAPTool-mac.dmgand open the file. Drag the DVAPTool application to your desktop or Applications folder. You can then proceed to the Using the DV Access Point Dongle page listed at the top of this page.

Installing on Linux

1.

‣Drivers for the FTDI USB chip used by the DV Access Point Dongle are included in most Linux distributions. Plug in the DV Access Point Dongle and download the DVAPTool archive athttp://www.dvapdongle.com/downloads/DVAPTool-linux.tgzand extract to your Desktop. You can then proceed to the Using the DV Access Point Dongle page listed at the top of this page. Note that some distributions like Ubuntu include an accessibility package called brltty that must be uninstalled before DV Dongle use. Newer versions of Ubuntu may require disabling the Modem Manager.

DV Access Point Dongle Installation

1 ... The DVAP and 92AD shud be on the same freq, according to your info
they are not.
2 ... All DV shud be on the "B" band and not the "A" band of the 92
3 ... You may need to put your call sign into RPT1 andRPT2 with a "C"
and "G" in the 8th pos.

Dear,

thanks for the messages but still with the problem as I comment below:

a) My DVAP is red
b) Frequency UHF - 70 cm
c) Radio IC 92ad

I have done all the settings using the frequency 438.000 MHZ DV mode
My settings:

URL: REF018BL
RP1: NOT
RP2: NOT
MY: PU2TKL / ID92AD

Ic 92ad:
I can not connect the DVAP tools.

Pressing the PTT to sweep below grows to the maximum squelch, but does not connect with the DVAP.

Already used the DVAPutil and have not had success.

I have a radio ic 880H with the same settings and usually connects to DVAP Tools.

Anyone ever had this same problem and managed to solve ??

I appreciate any help.

Make sure your "MYCALL" is just your callsign. E.g. "AB2ZI" not "AB2ZI
B" Unless you have your call WITH the B or C registered with your
gateway separately.

That was stopping mine from working (transmit) initially.

I had a similar problem. It was the registration on the gateway. In the MY callsign field just enter your call without any additional letters. Don't use the "C" (or "B" if you're using the uhf DVAP).

That's what did it for me.

Kelvin,

Thanks!!

Exacty mycall = PU2TKL and not PU2TKL B ou C (8.position)

I have done everything I reset the radio 02 times, and nothing.

has some configuration in the radio MODE SET dv ??

Gilvan

Hi Don,

I'm fairly new to D-Star myself but your problem maybe due to:

"MY: PU2TKL / ID92AD" - I believe that you can only have 4 alphanumeric tag. (i.e. MY: PU2TKL / ID92)

I use an Icom ID-51E and it only lets me enter 4 characters were I see have 6?!

Hope this helps.

Regards
Rich (2E0RHD)

Robert,

Seeing that you just finished your registration last night, I suspect that your information may not have been replicated to all of the systems yet. Since you are getting a “Receive only” response, that a pretty good indication that the repeater doesn’t know who you are yet.

But after looking at the last heard page it looks as if you might have been successful earlier today.

Welcome to D-STAR!

Subject: [DVAPDongle] Canne not call out rodion to dvap (red)

Good morning;

I have programme the radio and the dvap on the same frequency.

On the radio id92 I programme

1-UR; VA2REXBL for the repeater I won't to be on.

2-R1; DIRECT

3-R2; DIRECT

4-MY; VA2DBJ /ID92

5-press the PTT and the dvap conforms is connecter to the system remote system link receive only

I press on 0 hone my ic92, to the CQCQCQ shone on the displays I prise on the PTT to call out not a response on my IC2820. but I cane hire all transmition coming in the radioic92 but I CANNOT CALL OUT.

Please I am close to final step to transmit, Thank-you

Maybe your IC92AD is transmitting off frequency. Do you have a frequency counter that you could use. If so, turn it on and transmit with the IC92AD see what frequency you are actually transmitting on. I have the Red DVAP dongle and I use a IC-5100. I had the same problem at first, but found out it was the way I had put in MY Call. Hope this helps? If your 880H connects to the DVAP, then that would suggest that the problems is in the radio. Do you have the "Offset" turned off, so that the radio is transmitting in simplex mode and not in Dup mode?

Good Luck

Hello and my name is Shane KD7JWC. I found my solution here
http://w6kd.boards.net/board/4/dstar-commander-g4klx-support-discussion.
The dstar commander makes setting it up a breeze. From the time i burned
the image to running the dstar commander to having the pi up and working
with the dvap was about 25 mins and it auto starts everything based on the
info you put into the dstar commander software. It even has VNC server
loaded and will set up your wifi I believe. Give it a shot, the forums are
full of good advice.
Cheers
KD7JWC

Hi John. I talked with Mike KB7WUK and he basically runs the Sherwood repeater we are trying to link on and we came up with this to share with you so both he and I can talk to you.
Connection is 146.610 DUP- .600 no tone
under MY Call W7BO
Repeater 1 WB7DZG C
Repeater 2 WB7DZG G
UR Call CQCQCQ

This should work for you John. If you leave repeater 2 empty you will be talking on the 2 meter side of the repeater there locally, adding repeater 2 as I showed you will allow you to actually talk on the gateway "G" and then people with dongles and dvaps can talk to you.
Let me know if this is helpful and I look forward to talking to you.

Your problem is that you have not disabled the “app nap” feature in Mavericks. Right click on the DVAPTool software, go to properties, and uncheck the “app nap” box. Problem solved.

3506. Connect to a reflector

Yahoo group: DVAPDongle
Date: 2014-11-03 00:05:08 UTC
From: kb3ayy33@...
Topic: 3506 Message: 3506

Ok guys, still trying to get a handle of this had a message saying I could not connect on this group and I got a message telling me I need to connect to a reflector so I tried and tried but had no success. I tried the next day and I connected first try so finding out that it connects randomly. Also when I'm trying to connect I noticed that I Rx others having a conversation but I'm not connected so the question is does the dvaptool time out that my internet provider is hanging.

Hi Martin, thanks for the reply! I did that and still nothing. It seems to connect to the dvap but I get a " not linked" message on my 51+. It must be something else that I've done wrong. Possibly in the way I.ve got the radio set up.
73, Jerry

Just a suggestion maybe wrong is the a nap option you have to turn off something like that ??
Hope it helps

Martin
M0MBV
Ps I am not that technical either
Copied from a previous post
View Source

Your problem is that you have not disabled the “app nap” feature in Mavericks. Right click on the DVAPTool software, go to properties, and uncheck the “app nap” box. Problem solved.

3508. New DVAP and ID51A not working

Yahoo group: DVAPDongle
Date: 2014-11-05 00:06:19 UTC
From: rlmalm@...
Topic: 3508 Message: 3508

I have a DVAP 70cm and an ID51A Plus. I have everything installed and downloaded the file from DSTARInfo.com to setup my radio for the DVAP on 446.000 using reflector REF030C. But regardless of whther I try the channel for Status, Echo or the Reflector, I do not get any audio anywhere.

I get a green blinking LED when the DVAP is Closed, a blue blinking LED when the DVAP is Open, a solid green LED when keying the HT but I never get a red LED to indicate the DVAP is transmitting to the radio.

I also set the squelch to minimum, just in case.

Any ideas on what to check or what could be wrong?

Tnx.
Rick, KD4VOJ

I agree. Or else if it says link connected there is no traffic.

I think some kind of regular net might be called for. Repeaters might even auto join a popular net for a short while...

Need to be methodical.
The lights seem hopeful.
Are you using windows or Linux... and when you open the dvap software on the PC does the software identify the dvap and show you a serial number.

Is the correct frequency entered (well I'm only asking) and can you see RF being transmitted on a regular FM radio monitoring the same frequency

If the dvap is hearing the id51 text will display on the PC software window when you send the Echo or Info (status) commands even if there is no link established elsewhere.

Jerry,

I also have a Icom ID5100A and mind did the same thing when I first used it on D-Star. I did not use any program cables or software from a third party. I did a full reset on mind and it went to working like it should. Try doing a partial rest first, if that doesn’t work do a full reset. Hope this helps

From: paulsub63@...
Topic: 3525 Message: 3536

I've been told by someone who tried to log in to the same repeater as I was trying...

"After looking at the logs it looks like there is an issue with either the network that the repeater is connected to or an issue with the Internet connection because I am seeing lots of packet loss and that is why it keeps unlinking"

So, it might not be me, but our system link (it's a wireless connection to the phone tower.)

Topic: 569 Message: 3541

Hi friends,

I bought Red 2 metr DVAP, using with my windows laptop. I downloaded V 2.0 beta 5 software. DVAP connects to Internet I see stations, but don't hear anything. When I connect the sound section of the software shades and i hear nothing. But I know the dongle is working as I see stations on the software. I also bought ID-51. I'm not sure the 51 is talking to the dongle. First issue, how do I know 51 is talking to dongle?

Thanks for the help

Hi Gary. The first thing to try is an echo test. Place "DVAP___E" (where underscore is a blank) in URCALL and key up/talk. If you hear yourself repeated back, your radio is talking well with the DVAP.

It's likely to work, however something to consider.

I have had two full windows 8 tablets. One issue that seems to be across all the inexpensive ones. When the screen is off, it is considered to be in standby or sleep mode and kills all USB/accessories and puts software in powersave. In that case, you would be killing the battery with the screen on constantly.

Let me know what you do and how it works for you, as I have been looking for a simular solution

Thanks
Ken

From: ka7gzr@...
Topic: 3552 Message: 3552

Hello all!

I have a DHAP which is a RPI interfaced with a 440 dvdongle. I have a iPhone 6 and connect to the Pi with a Wi-Fi dongle. It connects to it reliably but about 90% of the time the dvdongle doesn't recognize the connection (no gateway found) but I can see my personal hotspot has a connection. If I manually connect it then works. Manually meaning I turn off the dvap tool (v1.04) and bring up the Wi-Fi tool and connect to the iPhone then restart the dvap tool it works ever time. It seems like when the Pi boots it is a race condition between the dvap tool looking for the internet connection before the personal hot spot has establish an internet connection.

Any ideas?

TIA

Jim

For sale is my ICOM ID-31A. I thought I would try DSTAR again but I find I am just not using the radio at all. Radio is just a couple of months (purchased October 27) old and like brand new (I am not using it). Also included is a DVAP-get on DSTAR even if there is no repeater in your area. In addition, The package comes with RT Systems Programming software, cable. Original box, charger (not pictured), paperwork is included. 500.00 shipped Ship to US buyers only, Paypal only please.

Here’s an issue I see – be sure that your iPhone’s hotspot is at the top of the connection queue in the DHAP. When I do this it starts up properly 95% of the time – if not it takes two starts.

Buena suerte!

Chris, KL4C

Group,

I just tried to link to a second repeater and it worked just fine. The mystery now seems to be why I can link to one but not the other. One is linking to the C channel and one to the B channel. C worked B did not. I am using 2m DVAP. All reflector linking is perfect. Any ideas?

Hello,

The gateway you were registered on, K6HLE, was removed from the trust server network at the request of the gateway administrator. You will need to re-register on another participating gateway.

This is true of anyone else who was previously registered on K6HLE

Hope this helps,

Brian

Some difficulties with my DVAP....
After opening the DVAP program, I get a pop up window saying something about my internet not being connected. When I do try to link to a reflector I get the recorded message Gateway Unknown.
Ive had great success in the past with this setup using an ID51a. Ive deleted the program and reloaded from the dvap site and got temporary joy. Now it seems that nothing I can do allows the link up to reflectors via the DVAP.

Any ideas or suggestions?

Thanks, Mike K0MEB

Are you registered with a D-STAR registrar? If you are not, this is one
of the symptoms; hearing but not being heard.

According to this web site: http://query.ke5bms.com/index.php
you don't have any terminals registered.

I hope this helps. And welcome to D-STAR.

Greetings; by no way an expert on this topic, but I had a similar situation and I found it was linked but when I pressed menu (on my id31a) and than checked call sign info. UR was populated, R1 was populated, R2 (the gateway) was not populated and of course. My was populated with my call sign.. issue may appear to be in your radio programming and not the dvap.

Just a starting point.

From: Bob Taylor
Topic: 3580 Message: 3580

Greetings,

I have just been trying to use my DVAP after a long period away from Dstar. I can connect okay but I am getting a 'receive only' message.

Since my system always worked faultlessly in the past I am at a loss to know what has changed.

My initial registration was with 'ne1dv.dstargateway.org' but I seem unable to raise that site to check my registration. Does anyone know if the site is still operational? I notice that my callsign is now appearing under https://wb1gof.dstargateway.org/ but I am unable to log in to check/amend my registration.

All offers of advice/assistance gratefully accepted.

3588. Getting DVAP software to run in a 64 bit Linux install

Yahoo group: DVAPDongle
Date: 2015-01-22 02:08:23 UTC
From: kc6d@...
Topic: 3588 Message: 3588

This may have already been answered but here it is:

I had problems getting the DVAP software to run in Ubuntu after an upgrade. It had previously been working.

So that you know: the software is written for a 32 bit OS. You have to install additional packages of software to make it run in a 64 bit environment.

I had done this and, at first, all was well. But after a clean sweep re-install of the OS the DVAP wouldn't run. The Readme file that comes with the software instructs you to install the package "ia32-libs" by running the command "sudo apt-get install ia32-libs". The problem was that the ia32-libs package was withdrawn from the repositories in the interval between my first install of it and the next time I tried. Apparently ia32-libs was big, messy and hard to maintain. It took me a long while to find the current version of ia32-libs. Here it is:

```
sudo apt-get install lib32z1 lib32ncurses5 lib32bz2-1.0
```

Open a terminal, copy and paste this command, put in your password when requested and that's that. All is well again.

For all of you that end up with a fix to your problems it would be nice
if you could post the remedy you came up with to the group instead of
just saying it's fixed.
I mean, it is good to know that you got a fix to your problem but it
may help someone else that has a similar concern to search out an answer
not just multiple reference's to the problem.

3590. Re: Can't get software to run in Ubuntu 14.04

Yahoo group: DVAPDongle
Date: 2015-01-23 16:07:50 UTC
From: kc6d@...
Topic: 3295 Message: 3590

I have this solved, finally.

The DVAP Tool software is written to run in a 32 bit operating system. Additional packages must be added to a 64 bit OS to allow it to run.

The package ia32-libs is no longer available, removed from Linux repositories.

The replacement command is

sudo apt-get install lib32z1 lib32ncurses5 lib32bz2-1.0

Copy and paste into a terminal, supply your password when asked, accept the install, and voilà, it works. I'm not positive but I don't think I had to log out and log back in, although that may be needed.

KC6D

Fedora responds with:

No package avahi-compat-lib-devel* available

If I go to the DVAPTool folder in Terminal, and type in DVAPTool, it responds:

Command not found

even though I can see the file by typing ls.

Attachments: 2 described; binary payloads are missing from this source WARC

In the 2820, you can reserve a block of memories for your favorite reflector commands, unlink and echo. In each memory, put the DVAP frequency, simplex and DV Mode. For RPT1, type DIRECT. Leave RPT2 blank. In UR or Your Callsign, put either CQCQCQ for talking, 7spaces with a U in the 8th position for unlinking, same with an E in the 8th position for echo test or your favorite reflector linking command such as REF030CL, REF001C for linking. Just change what’s in UR and store as a separate memory then rotate the memory dial to your favorite command, PTT, then rotate to the CQCQCQ channel. A screen shot is below, but may not come through on the group.

Roy,
Try this at the command prompt:
./DVAPTool
Note the period and the forward slash; these will tell the shell that you want to execute the file in the folder you're in. It won't do it by default.

3602. DVAP Unlinks??

Yahoo group: DVAPDongle
Date: 2015-01-30 17:35:19 UTC
From: rrkpl@...
Topic: 3602 Message: 3602

Using an ID-31A and a DVAP running DVAPTool 1.04 on an iMac OSX 10.10.1. After around 15 minutes the DVAPTool still says connected to Reflector REF0XX C but there is no connection (ID-31A does not show up on the DVAPTool including Signal strength, MY, UR, R1, R2) as it does when linked and transmitting. The only way to reestablish a connect is to Quit the DVAPTool, restart the Tool, Open the connection and send the link command from the ID-31A

I haven't used this setup in about a year since I was near a repeater but now that I'm way up in the Blue Ridge mountains I'm trying to get it to work.

Does anyone have any thoughts as to why the link is unlinking on its own and the DVAPTool becomes unresponsive and has to be restarted.

Richard

I suspect that App Nap is the issue - I'm still running 10.6 (I'm stubborn). I've seen multiple mentions of App Nap being an issue with more recent versions of the MacOS.

FYI - I had to connect the DVAP to a PC to update the firmware. After update I reconnected the DVAP to the MacMini. That was 3+ years ago and I forgot to convey that step.

Topic: 3614 Message: 3615

No way to increase the retry counter, the other end also unlinks you at the same count.

If you are linking to a repeater that is using a cell phone connection, you are definitely going to have issues. I'd highly suggest getting the administrator of the repeater to link to a reflector and disable inbound connections.

Once the repeater is connected to a reflector, then you can connect to the reflector and that should increase your reliability substantially.

New to Group- mSame Problem
I just installed a new DVAP Dongle on a fast Win 7 computer.
Everything appears right on this end, but when I access a reflector I get a "Read Only" response on all reflectors. I am hearing stations on a few reflectors. I am using a new ID-51A as a radio and have entered the My Call as "W9WHF A" as recommended.
All the control commands seem to work.
Our local (Nashville) remote access is down so I can't really check much via the DV route.
Any suggestions.
I show as registered on the D*Star network.

I checked dstarusers.org earlier today and it showed
Me there as W9WHF A connected to REF021C
and I checked the registration page cross check
and both the XYL (K4LLD) and I are registered in
The approved users page.
We have some real issues on the KI4SDI Gateway repeater in Nashville. There is no link presently existing in the registration tab and the crosscheck feature on the website doesn't work either. All the stuff functioned a couple of weeks ago, but evidently there is some real issues and the link linkages are all down as well so you cannot access any reflectors in the normal way. However with the DVAP it's working fine except it's receive only. Am I missing something?
Thanks, it sure looks like it is a registration issue. I just don't know how to fix it.

Topic: 3580 Message: 3622

Robin: I think I know it might be the problem. I don't think I filled out the last personal information page after our approval from the KI4STI repeater administrator sent to me , I didn't know what it meant. This would apply to either of our two accounts. Is there anyway to go back and edit those, so that we can get this problem resolved. I noticed that when I did a registration check, it said "registration not OK" something about a space error.

I sent an e-mail to the KI4SDI administrator but no
response.
I don't know what's going on with our D*Star star repeater, but it looks like suffering from lack of attention.
Thanks for your help

3623. Dongle is not responding to certain commands

Yahoo group: DVAPDongle
Date: 2015-02-13 20:55:33 UTC
From: rmc8_99@...
Topic: 3623 Message: 3623

I am having trouble getting the Dongle to respond to the I,E, & U commands. I copied them directly from the website:
DVAP I
DVAP E
U

However, all I get is

Unknown command. Yes the U is in the 8th position.

What do you suggest?

3624. Re: Dongle is not responding to certain commands

From: rmc8_99@...
Topic: 3623 Message: 3624

I double checked and found a formatting error that resolved the problem when the DVAP is connected to my windows computer. However, using the same radio I am unable to get them to work with a Raspberry Pi. The Pi connects to reflectors as requested. But the other commands do not work. Am I missing something here?

The DVAP doesn’t support call sign routing. I’m assuming that G0WMO is a user and GB7RW is a repeater?
If so, just link the DVAP to GB7RW and call the station listening to the repeater.

I have set up a DVAP with a Nextbook for testing.

Works Great .

Some issues working with Nextbook and Windows 8.1

1. You do NOT need an OTG cable.. a powered hub (ONN 12 volt hub works)
(Walmart $10)
The ONN hub has a lighter plug for power
All four USB connections are NOT wired together on the hub..but
can be used in pairs on each side of the green LED.

2. Power saving can be set in windows for stay ON with battery connected.

3. DVAP software installed and ran just like a desktop computer.

I have DVap running now. I searched all over and found the instruction for the $60 software and purchased that. It did not work. Then I saw a message saying to install ITunes. So I did that and that worked. Now I think I may uninstall the ITunes and just keep the Bonjour file. Long way around but I got there.

Thanks all for the help. I wish I was more patient and waited for all the info.

Mark,

You can't just copy the image from one SD card to another. You need to use Win32 Disc Imager to move the image from your working SD card to the new one.

You will need to copy the image to the new SD card. Not the same as a disk copy. Use this:

http://sourceforge.net/projects/win32diskimager

It is a little quirky until you figure out how to use it. It will also take a while to complete the copy.

I would guess that it would depend on which radio you prefer using to access DSTAR. I have a couple of 2meter ones but have no knowledge of any difference, except the frequency. I would be interested in the 2meter one if you decide to get rid of that one.

I read recently that the front end on a 2M DVAP is easily overloaded and doesn't deal well with harmonics; not so much the case with the 70cm DVAP. From what I've read, I don't believe that it's a good idea to attach anything more than a unity gain duck to either. Maybe someone with direct experience will have a better response.

I have attached the DVAP to an external antenna. My ability to be a few blocks away from my QTH worked great. I am not sure how far I could have gone. I noticed no ill effects from using the antenna. I have since put up a hot spot which works for miles not just blocks.

In a message dated 3/2/2015 9:05:07 A.M. Central Standard Time, DVAPDongle@yahoogroups.com writes:

I read recently that the front end on a 2M DVAP is easily overloaded and doesn’t deal well with harmonics; not so much the case with the 70cm DVAP. From what I’ve read, I don’t believe that it’s a good idea to attach anything more than a unity gain duck to either. Maybe someone with direct experience will have a better response.

Just curious -

how much gain on the external antenna?

how much power being used to access?

2M or 70cm DVAP?

I use mine with a dual-band J-pole (it's a UHF DVAP). It works really well, and gives me enough range to be heard from any where in our complex. My J-pole is only about 18 feet high.

From: Dennis Griffin
Topic: 3648 Message: 3657

Oops. I overstated the range by a factor of ten. Amazing the power a zero can have.

Well, in looking at the poop sheet that came with my 70cm DVAP, I find a few pertinent statements that I don’t recall seeing on the DVAP website when I looked recently. However, I hadn’t seen the attached file at that time.

“Using the included antenna, the 10 milliwatt transmitter typically provides a range of 1000yards/meters.” I meant to type 100 yards/meters.

“An external power amplifier should not be used since necessary filtering and preampfification are not included.”

“An external antenna may be connected to the SMA connector for additional range.”

Additional info can be found in the attached file.

Hello all,

I have a few things for sale.
I have one DVAP for $100.
I have one 92A/D with GPS Speaker Mic for $500.
I have one 2820 with D-Star board and GPS antenna for $500

All items are fully operable and come in original boxes with documentation.
All items are clean and very well cared for.
I'm a non-smoker so white buttons are still white!

I'm accepting Paypal only. If seriously interested, please email me off list. Thanks

3668. IGNORING TRANSMIT WHILE NOT CONNECTED

Yahoo group: DVAPDongle
Date: 2015-03-18 03:43:17 UTC
From: kb1dni@...
Topic: 3668 Message: 3668

I checked this group to see about resolving this issue. I have been trying to get the DVAP working on 3 different computers with no luck. All 3 have the same error mentioned in the topic/subject.

I saw a couple of prior postings here but no apparent resolution was achieved for many. Seeing this is not working on 3 computers and even at a wifi hotspot I guess there must be a radio setting that I have overlooked.

I DO NOT GET THE RED LIGHT WHEN KEYING/TRANSMITTING only AFTER I RELEASE LIKE THE RADIO IS TRANSMITTING BACK TO ME BUT NOT CONNECTING TO ANY DSTAR REPEATER/REFLECTOR.

Any insight would be greatly appreciated.

Thanks,
Glen

This is normal operation for DVAPTool if you are not connected to a reflector/gateway.
Sending "CQCQCQ " in urcall does nothing if not connected.

What radio are you using to transmit to the DVAP?

Are you connected to a Windows computer with the DVAP?

The software is pretty straight forward so either you do not have your radio configured correctly, or you have some type of firewall/router issue that is not allowing your DVAP to get out.

You should have a blinking blue when the DVAP is ready, a green when transmitting, and a red when receiving.

3675. RE: [DVAPDongle] New DVAP and ID51A not working

What’s the programming that you have in your radio to link and then to talk?
When you are linked, what does DVTool show that you are linked to?

It is very possible that you have some port on your network. Can you try on another network? Preferably, not a corporate network where things are often known to be blocked.

I've had lots of issues behind Sonicwall, Watchguard and Fortinet firewall / Unified Threat Management gateways. Have had to write specific policies to pass the packets for DVAPs and Dongles. The initial connection will be made, then once traffic starts to flow the security devices see them as a threat and shuts them down. Have to grab the packet logs and track down the exact issue and then create a policy to exempt it.

Glenn, I have the red DVAP dongle. I also have the 51A. My from is set to simplex 441.000 MHz. Set your dongle to the same simplex frequency. 73 AI4LL

I am using the ID-51A windows computer. It connects and listens but will not transmit the audio even though the lights indicate that everything is working.

I have the flashing blue , green when transmitting and red. but the audio is not sending.....

thanks for the help.

What are the differences? There are actually many.

But the answer that matters, is that they are on different bands.

So you really want to know what the difference are?
The labels
The frequency checked on the box
The PC board is slightly different
In other words, all sorts of little things that no one should really care about.

Why are there two? The 2M version was first and easiest to create. The 440 took a little more work because of the frequency. The introduction of the ID-31 UHF only pushed the development of the UHF version.

Why have two? For various reasons. I've got both. I know of a lot of people that have both. Is there a reason to have both? Well, is there actually a good reason to buy the first? Of course it's not a live or die decision. I have both because it fits my needs. But then again, there are few people with needs similar to mine.

Are there differences? Yes
Are both needed? For me, yes.

The same reasons that hold true for any radio. UHF tends to penetrate walls a little better than VHF. VHF tends to be good for a little longer range than UHF. In most areas the 2 meter band is already pretty crowded. I think all of these reasons have been mentioned. I guess it really comes down to personal preference, and what works best with the equipment that you have.

I just returned form a weekend camping trip where I had the UHF DVAP set up inside the camper. I could hear it (although marginally) from the far end of the campground, which was approximately .5 mile. I was using the stock, stubby antenna on the DVAP. I am waiting to receive my dual-band DVMega. I will probably use the UHF side of it, because I'm already set up for that. It will be nice to have VHF available, should I decide to use it.

Hope this helps. 73.

I have a couple of each. I find it useful just to have the ability to link to multiple reflectors at the same time and just listen to the traffic. I have the 31A and three 51A radios. I find it enjoyable to listen to multiple things at once.

I tend to favor 2 meters, because I seem to be able to transmit farther on
2 meters than on 440. In my situation, 2 meter antennas are easier to tune
for swr. Im sure other people have different thoughts than me. It generally

is a personal preference but these are my reasons.

3696. RE: [DVAPDongle] Re: 2M vs 7cm Dvap

Yahoo group: DVAPDongle
Date: 2015-03-30 16:14:24 UTC
From: Jim MacKenzie
Topic: 3666 Message: 3696

I have both but I started with a 70cm one. (I had an opportunity to buy a 2m one from a nearby ham and thought I'd like to get a second one so that one can be permanently hooked up at home, and the other ready to travel with me.)

If I were to only have one I'd get 70cm again. My D-Star radio is dual band, but 70cm works well indoors through walls and such, and it's easier to build a high-gain antenna if you need. 2m might be more useful for a long-range node, but a 10 mW DVAP is probably not the best choice for such a node. :)

I personally went with the 440 UHF DVAP dongle here at my QTH. I liked the 440 dongle mainly because in this area 440 is not very crowded nor is their a lot of simplex activity. It would be nice to have both. I like the fellow who say he had “3 51A” and a 31A.

And I through I was bad buying the IC7100, IC5100 and the ID51A anniversary edition hand held.

3698. DVAP and Mac Question

Yahoo group: DVAPDongle
Date: 2015-03-31 05:06:31 UTC
From: Shawn P. Stokes
Topic: 3666 Message: 3698

I’m new to the DVAP but not new to DStar, have a hot spot and access to several machines in the area but wanted a VHF DVAP to travel with and for special projects. I bought mine on Saturday and haven’t had much luck with it. I downloaded the software, downloaded and set up the driver as listed on the website and set the software up. I can get the software to run and I can get the DVAP to plug in and the unit to interface ok. I can check and it is seen ok by the network though I haven’t talked to anyone yet.

I can connect to a repeater or a reflector. But after 2 minutes of no activity it just dies. It goes from the blue flashing light to the green slow blink and I can’t do anything with it. If I hit close then open it again it will connect to it and it hears ok but it will not TX. Then I have to unplug the DVAP, shut the software off, plug the DVAP back in and restart the software. Lather, rinse, repeat. I’m sure this is a config error on my part but I’m not sure what. Some info/assumptions:

1. 2010 MacBook Pro 13” running 10.9.5 (I don’t remember the names to the versions, sorry)
2. DV AP Dongle Tool version 1.04, Boot is 1.09 and App is 1.07
3. FTDI Driver installed for this version of OS X, with reboot

Anyone have any ideas what I missed?

Thanks!

73,

Shawn

Topic: 3666 Message: 3701

I had the same issue when I picked up my new DVAP and hadn't had it previously, As Dennis mentioned, App Nap is the culprit. Right click the DVAP Tools application and check "Prevent App Nap." That will do the trick. As an aside, I tried Ian's suggestion of modifying the power management settings and that did not work for me. I think the App Nap "feature" is included in newer versions of OSX (10.9 is Mavericks, BTW), so the power management setting don't do anything to prevent this particular problem, although common sense would suggest that they should.

I’m new to the DVAP but not new to DStar, have a hot spot and access to several machines in the area but wanted a VHF DVAP to travel with and for special projects. I bought mine on Saturday and haven’t had much luck with it. I downloaded the software, downloaded and set up the driver as listed on the website and set the software up. I can get the software to run and I can get the DVAP to plug in and the unit to interface ok. I can check and it is seen ok by the network though I haven’t talked to anyone yet.

I can connect to a repeater or a reflector. But after 2 minutes of no activity it just dies. It goes from the blue flashing light to the green slow blink and I can’t do anything with it. If I hit close then open it again it will connect to it and it hears ok but it will not TX. Then I have to unplug the DVAP, shut the software off, plug the DVAP back in and restart the software. Lather, rinse, repeat. I’m sure this is a config error on my part but I’m not sure what. Some info/assumptions:

1. 2010 MacBook Pro 13” running 10.9.5 (I don’t remember the names to the versions, sorry)
2. DV AP Dongle Tool version 1.04, Boot is 1.09 and App is 1.07
3. FTDI Driver installed for this version of OS X, with reboot

Anyone have any ideas what I missed?

Thanks!

73,

Shawn

Cheers Scott. It was a while ago. I must applied Prevent App Nap to DVAP get it to work as I have had a few QSO's on the MacBook in OS X. Mainly Use the Raspi mostly now.

Regards

Ian

Thanks for the input - App Nap was the culprit and I wouldn’t have found that otherwise. It’s working now on my iMac just fine and will test it with the MacBook next but no issues.

3704. Re: DVAP not connecting to inet or reflector

Yahoo group: DVAPDongle
Date: 2015-04-05 20:08:09 UTC
From: w9meb@...
Topic: 3543 Message: 3704

I'm unsure this is the solution to the original problem of getting "gateway unknown" audible message or the pop up that says it doesn't recognize your DVAP and encourages you to be sure it is plugged in to a USB port.
I can move to another computer and it will work after opening and closing the dvap program a few times.
Still stumped on the overall issue but its working right now.

From: wb4qdx@...
Topic: 3705 Message: 3705

The ultimate D-STAR training class, D-STAR InfoCon 2015, returns to Dayton Hamvention for the fourth year to provide an introduction to D-STAR for the many new users getting on the air and more advanced topics for more experienced D-STAR users. The three-hour class will be held on Friday, May 15th beginning at 8:00am local time. It will be held at the Drury Inn at 6616 Miller Lane in the heart of hotel row near Hamvention. This year’s topics will include basic D-STAR operation, programming for all models of D-STAR radios, using DR Mode, downloading and updating your radio memories and using other D-STAR devices.

All registered class participants will receive a D-STAR InfoCon mouse pad and are eligible to win an ID-51A Anniversary Edition dual-band D-STAR handheld to be given away during the class.

The cost of the class is $20.00 and includes all course material. Pre-registration is required and seating is limited. Registration and payment via PayPal can be found at www.dstarinfo.com http://www.dstarinfo.com/. For more info, send an email to info@dstarinfo.com.

3706. Thinking of a frequency for your DVAP

Yahoo group: DVAPDongle
Date: 2015-04-06 21:03:57 UTC
From: Woodrick, Ed
Topic: 3706 Message: 3706

If you are thinking about a frequency for your DVAP, remember, there are some frequencies that are in use that you may not be able to hear, but could cause damage to. It's always prudent to check the band plans, as well as the satellite frequencies before choosing a location. And don't foget that just because your DVAP is very low power doesn't mean that you'll remember to set your radio at the lowest power.

The following frequencies are currently used for Amateur Radio ISS contacts (QSOs): Voice and SSTV Downlink: 145.80 (Worldwide)
Voice Uplink: 144.49 for ITU Regions 2 and 3 (The Americas, and the Pacific and Southern Asia)
Voice Uplink: 145.20 for ITU Region 1 (Europe, Russia and Africa)
VHF Packet Uplink and Downlink: 145.825 (Worldwide)
UHF Packet Uplink and Downlink: 437.550
UHF/VHF Repeater Uplink: 437.80
UFH/VHF Repeater Downlink: 145.80

In D-STAR the data is embedded in the signal from the radio. That signal is passed through the DVAP.

Answer is Yes.

Of course make sure that data is suggested as the reflector’s use.

3710. Winbook & DVAP

Yahoo group: DVAPDongle
Date: 2015-04-09 19:32:23 UTC
From: gary@...
Topic: 3710 Message: 3710

Some ham friends of mine put me on to another way of using my DVAPs...which I personally like better than the Raspberry Pi approach: Winbook (an 8 inch Windows 8.1-based tablet).

Winbook is a brand owned by Micro Center and has been around for a long time. The Winbook tablet (in my case a TW802 http://goo.gl/scbxkM) is a full Windows 8.1 operating system with touch screen. Once I installed Bonjour, DVAPTool worked perfectly with my 2m DVAP. This approach eliminates the large bundle of Raspberry Pi accessories I was forced to take along when I travel...so now less stuff to carry plus I get a lot of extra use out of the Winbook compared to my Raspberry Pi's.

Since the Winbook is basically a PC, with a USB, Bluetooth & wi-fi, keyboards and other accessories can be used if needed. I've installed Google Chrome to use with Google My Business and other Windows apps with no problem. I also use a 128GB SD card for extra storage and to take along movies and other large files when I travel. Battery life has not been a problem so far.

So in one small tablet, I have D-STAR access via the DVAP or Dongle, email, browsers, wi-fi, bluetooth, and a bevy of PC uses to boot. Reconfiguring is much easier since the tablet lets me see the software screens rather having to VNC-into the Pi or attach a monitor.

By the time you add in the Raspberry Pi must-have accessories and such you spent about as much as what the Winbook costs. The Winbook works well for me...another arrow in the quiver.

Again, if you can hear the other station’s voice, you should be able to decode their data.

Unless one of you is running the high-speed data in the ID-51+ / ID-5100 and the other one isn’t. Or one of your signals is so weak that you are getting voice and barely any data through.

Neither a repeater not a reflector should be modifying that portion of the data stream.

I think that most of the newer Windows tablets should work fine.

The WinBook is a little unique in that it basically has a USB charge port and a USB out port. So you can easily charge and use the DVAP at the same time. Many others have a single USB port for both duties.

Hi Ed

So if I understand you correctly a small windows tablet running 8.1 could be used with the Dvap instead of configuring a raspberry pi2.

Just download the drivers like I did on my windows laptop and connect to a wifi source and I could be good to go. If that is the case That would be super. If you can add any other advice that would be great.

Thanks again. I won't hit the buy the pi button on amazon.

The DVAP has been supported on Windows for many years.

The Windows tablets run Windows.

It sounds as simple as it is. About the only difference is that if the tablet has only one micros USB port, then you will need a USB On-The-Go (UTG) cable.

Windows tablets run full Windows, they aren't restricted like iPads or Androids. You can add large monitors, keyboards, disk drives and all sorts of things to them.

3720. Re: [DVAPDongle] DVAP and a Tablet?

Yahoo group: DVAPDongle
Date: 2015-04-24 18:13:23 UTC
From: al
Topic: 3714 Message: 3720

Hi Ed and DSTAR Group

I had previously installed the DVAP on a windows laptop and it works great. Since our email correspondence I just bought the win 8.1 tablet and installed the DVAP program on it. The program opens up but it isn't allowing me to change to the tablets com port. The com area is grayed out and is showing me com 3 (which is the laptop com port) and not allowing me to use the tablets com1 port. Also, when I put in my simplex frequency it informs me that it is not a valid frequency. But this frequency works perfectly on the laptop.
Any suggestions from the group would be appreciated.

So if I understand you correctly a small windows tablet running 8.1 could be used with the Dvap instead of configuring a raspberry pi2.
Just download the drivers like I did on my windows laptop and connect to a wifi source and I could be good to go. If that is the case That would be super. If you can add any other advice that would be great.
Thanks again. I won't hit the buy the pi button on amazon.

Are you sure that COM1 is where the DVAP installed? That sounds a little unusual. Make sure that you have to correct COM port by checking the Ports in Device Manager.

Hi Ed and DSTAR Group

I had previously installed the DVAP on a windows laptop and it works great. Since our email correspondence I just bought the win 8.1 tablet and installed the DVAP program on it. The program opens up but it isn't allowing me to change to the tablets com port. The com area is grayed out and is showing me com 3 (which is the laptop com port) and not allowing me to use the tablets com1 port. Also, when I put in my simplex frequency it informs me that it is not a valid frequency. But this frequency works perfectly on the laptop.

Any suggestions from the group would be appreciated.

From: Al Winger
Topic: 3714 Message: 3723

Hi Ed

I did some checking after your last input. It appears that the laptop and the tablet are both com 3, however on the tablet the Open button is still grayed out so I can't connect. On the laptop I have no problem connecting to reflectors.

I am using the latest software version of the Dvap 1.04 and all the settings on both devices are the same when the Dvap is connected to either of them. When I connect it to the tablet I do get the pulsing green light.

Appreciate your thoughts on how to un gray the Open on the tablet so I can connect.

Have a super weekend.

From: Al Winger
Topic: 3714 Message: 3724

Hi Ed
Update and success. I put tablet in recovery mode then downloaded bonjour, plugged in the Dvap dongle, let it install and then downloaded 1.04 Dvap software. Put in my call sign and frequency, clicked on the help tab above and com 3 lite up and allowed me to open. I linked to 30C to test and then unlinked.

10 minutes total once I had win 8 tablet back to factory settings.

Thanks again for your time and wisdom and the yahoo Dstar group.

Dayton’s Friday Evening D-STAR at the Drury Inn

Friday evening’s D-STAR at the Drury Inn event will follow the Dayton Hamvention’s theme of “Homebrew Radio” and talk about Homebrew D-STAR.
Homebrew has been a big part of D-STAR since the very beginning. It’s been homebrew that’s driven D-STAR to where it is today.

Here’s some topics we expect to cover.

· [http://ts1.mm.bing.net/th?&id=JN.eWryhIfv3aakHPVUgEtXgg&w=300&h=300&c=0&pid=1.9&rs=0&p=0&r=0] <http://www.bing.com/images/search?q=homebrew+radios&view=detailv2&&&id=8F38DE38926868520F8FDB943AF55F15215D93E6&selectedIndex=2&ccid=vd1LrC18&simid=608028448952748943&thid=JN.eWryhIfv3aakHPVUgEtXgg> D-STAR Today - Statistics

· P-25 from Icom

· Learning how to use your new radio the easy way

· Updating your radio

· The options currently available with homebrew

· Samples of homebrew

· Homebrew by the developers

· Your Homebrew
Yes, the last subject is Your Homebrew. We want to see your homebrew. If you are going to be joining us Friday evening, please bring it along with you. If you aren’t going to be joining us, please send us a description and picture. We want everyone to see the options available.
Here’s what we need from you!
For those sending in your homebrew pictures, as well as those bringing their homebrew, here’s what we’d like to see

Ø A picture of your homebrew solution

Ø A short description of what it is

Ø A list of the parts and pieces

Ø If you have links to any additional information or where the parts may be obtained.

[cid:image003.jpg@01D08205.D7A7A540]

If you can send us the information as s single PowerPoint page, that would be great! Try not to get the font too small. People in the back of the room won’t be able to appreciate your masterpiece.

Please send your submissions to Pictures@...<mailto:Pictures@...>
When and Where
Friday, May 15, 6:30-8:30 PM – D-STAR Update
Drury Inn Ballroom
6616 Miller Lane
Dayton OH

Light refreshments will be provided

Check www.DSTARInfo.com<http://www.DSTARInfo.com> for up to date information.

Does anyone have their DVAP running on a new Raspberry PI 2? If so how do you have the PI setup and where did you find the information?

Thanks and 73,
K4SHP

I have not set up a DVAP on an RPi2 but I have set up other devices. The same images like W6KD, Western DStar, and Maryland DStar that were used for RPi B+ have all been updated for RPi2 and should work fine using the current instructions that come with them.

I have used the Image file and the instructions here ... and have 4 Pi's that can talk to DVAP Dongles ... 70CM and 2M and the DVMEGA Board ... 70CM and the 2M and 70CM boards...

I suggest you start there. They update the files and have it set up to send the IP address to your cell phone . it allso is set up to be shut down and rebooted from your radio.

Hi Jason;

By now, most distributions support the Pi-2. You can try my image here:

http://kdj.metro-uhf.org/dvap/ http://kdj.metro-uhf.org/dvap/

Doc is here: http://www.metro-uhf.org/kc4yoz/dvap/yoz-pi2-setup-instructions.html
http://www.metro-uhf.org/kc4yoz/dvap/yoz-pi2-setup-instructions.html

Mine is based on the WesternDstar image, which is available here:

Downloads http://westerndstar.co.uk/html/downloads.html

http://westerndstar.co.uk/html/downloads.html

Downloads http://westerndstar.co.uk/html/downloads.html Download File Description Base Image ircDDBGateway Ds/Repeater Raspberry Pi Version 2 +Widget An ‘Autostart’ Raspberry PI image for D-StarRepeater ...

I would go here Maryland D-Star http://maryland-dstar.org/ and use there image and instructions. The update their image and instructions regularly. I have several Pi's configured to run 2m and 70CM DVAPs and DVMEGA boards.
They have set it up so you can repboot or shut down the pie via the radio.

http://maryland-dstar.org/

Maryland D-Star http://maryland-dstar.org/ Digital Smart Technologies for Amateur Radio
The first Maryland D-Star repeater was placed in service on 70CM in Harford County in 2007.

Hi Folks,

Assisting a friend with a new DVAP. He (and I when I config my spare DVAP as him) get the R/O, rcv only when connecting to a reflector. With my callsign entered into his DVAP or mine they work normally. His radio passes through the gateway when he's on a repeater, so looks like the reg is OK. I looked at his terminal IDs and they look OK as well. Am I missing something?

Couldn't find a lot scrolling through the forum, referred already to the D-Star Self Registration Instructions and verified the reg and term IDs are set as required.

His call: KD2BAH

Thanks in advance for any suggestions!

Check the I'd. If he is registered just his call sign, with no spaces and g,c,b,a, etc.
If the call is wrong, you won't be seen by the USTrust servers.

Topic: 3738 Message: 3738

Many thanks for your reply Robin, and apologies if my reply has doubled I had a delivery failure.

Probably due to my poor wording of the original question I think you misunderstood let me re-phrase.

As the Dv-dongle (blue) has had a software revision to Dv-tool 2.0 I wondered if there are any plans to update the current Dv-tool for Dvap (red) users ?

Sorry for the confusion, a permanent issue at this end !

Best regards

David

New DV-AP owner here AE5ZZ

Is there a search feature on the Yahoo group - I sure can't find it.

Looking for things to do with "gateway unknown" after making sure all 8 characters are in the right place and seeing someone last heard on the repeater W0EEE

I cannot figure out why I can't connect using W0EEE BL as the "Your Callsign" in the RT systems ID-51 Programmer as that same technique works with other repeaters.

Do you have the same problem when you use the D-Star Calculator in RT Systems? I’ve never had an issue with Gateway Unknown in terms of the UR Callsign field. Mostly when that happens I’ve found that my DVAP has lost connection to the internet.

3743. Problem with DVAP

Yahoo group: DVAPDongle
Date: 2015-05-23 19:49:37 UTC
From: mfdozier@...
Topic: 1077 Message: 3743

I am new to DSTAR. I very recently bought an ID-51A and a DVAP (70 CM) version.

My computer is a macintosh running Yosemite.

I'm able to get the DVAP working and have successfully linked to the 1C reflector. I can hear QSOs fine via the ID-51A.

My problem is that after a few minutes, the DVAP appears to quit communicating with the ID-51A. When working the blue LED is flashing and the red LED on solid.

Maybe in the middle of someone talking, both the blue and red leds go off and the green LED starts slowly flashing. The conversation audio stops from the ID-51A.

I can see the status on the DVTOOL window on the mac that shows that QSOs are ongoing. If I select "close" then "open" on the dvtool window, the LEDs return to the blue & red state and the ID-51A continues with receiving the audio.

Any suggestions?

PS: I'm also a newbie to yahoo groups. I posted a similar message earlier, however have not been able to find it in the lists.

Thanks in advance,

Mabry

Unfortunately Robin, unless someone can correct me on this, in Yosemite you can only turn "app nap" off for all apps (Global) and this is done from the Terminal window, t does not allow you to turn it off for just one. If you select the app then show the info all you have as far as a selection is "locked"

Are you running Windows under emulation on your Mac? I’m currently using W 7 with VMWare Fusion, and it asks which OS I’d like to recognize the USB device I just plugged in. This can be set to "do not ask”, so maybe it’s set to default to the Windows OS and the Mac OS & DVAPTools aren’t seeing your device???

Hi Ed and group

I made the mistake of lending my 70 cm Dvap out to a friend who installed it on a Mac. Now that I have it back it will open but not allow me to link to any reflectors. I get no audio "remote system linked", etc.

Is there a way to reset the Dvap and would I then have to reinstall the PC software?

Thanks in advance

Subject: Re: [DVAPDongle] DVAP and a Tablet?

Hi Ed and DSTAR Group

I had previously installed the DVAP on a windows laptop and it works great. Since our email correspondence I just bought the win 8.1 tablet and installed the DVAP program on it. The program opens up but it isn't allowing me to change to the tablets com port. The com area is grayed out and is showing me com 3 (which is the laptop com port) and not allowing me to use the tablets com1 port. Also, when I put in my simplex frequency it informs me that it is not a valid frequency. But this frequency works perfectly on the laptop.

Any suggestions from the group would be appreciated.

The DVAP has been supported on Windows for many years.

The Windows tablets run Windows.

It sounds as simple as it is. About the only difference is that if the tablet has only one micros USB port, then you will need a USB On-The-Go (UTG) cable.

Windows tablets run full Windows, they aren't restricted like iPads or Androids. You can add large monitors, keyboards, disk drives and all sorts of things to them.

Hi Ed

So if I understand you correctly a small windows tablet running 8.1 could be used with the Dvap instead of configuring a raspberry pi2.

Just download the drivers like I did on my windows laptop and connect to a wifi source and I could be good to go. If that is the case That would be super. If you can add any other advice that would be great.

Thanks again. I won't hit the buy the pi button on amazon.

Hi Ed and group

I made the mistake of lending my 70 cm Dvap out to a friend who installed it on a Mac. Now that I have it back it will open but not allow me to link to any reflectors. I get no audio "remote system linked", etc.

Is there a way to reset the Dvap and would I then have to reinstall the PC software?

Thanks in advance

Hi Ed and DSTAR Group
I had previously installed the DVAP on a windows laptop and it works great. Since our email correspondence I just bought the win 8.1 tablet and installed the DVAP program on it. The program opens up but it isn't allowing me to change to the tablets com port. The com area is grayed out and is showing me com 3 (which is the laptop com port) and not allowing me to use the tablets com1 port. Also, when I put in my simplex frequency it informs me that it is not a valid frequency. But this frequency works perfectly on the laptop.
Any suggestions from the group would be appreciated.

Hi Ed

I do not see myself connected on the start screen or black companion screen.

But the blue light goes on implying connection . But when I do an unlink on the ht it stays blue.

No echo test or reflector info available when I issue those commands from the ht. I even put it back on the mac and the same issues occur.

Appreciate your thoughts as usual.

Hi Ed

Tried on both 70cm simplex frequencies and no luck. I do not see myself on screen when I transmit.

I have a call into Robin at Dvap to see what he can offer.

If you have any other thoughts please let me know. If not I will let you know what I come up from Robin.

Thanks again. I appreciate your help as usual.

Hi Ed and DSTAR Group

I had previously installed the DVAP on a windows laptop and it works great. Since our email correspondence I just bought the win 8.1 tablet and installed the DVAP program on it. The program opens up but it isn't allowing me to change to the tablets com port. The com area is grayed out and is showing me com 3 (which is the laptop com port) and not allowing me to use the tablets com1 port. Also, when I put in my simplex frequency it informs me that it is not a valid frequency. But this frequency works perfectly on the laptop.

Any suggestions from the group would be appreciated.

The Windows tablets run Windows.

It sounds as simple as it is. About the only difference is that if the tablet has only one micros USB port, then you will need a USB On-The-Go (UTG) cable.

Windows tablets run full Windows, they aren't restricted like iPads or Androids. You can add large monitors, keyboards, disk drives and all sorts of things to them.

Hi Ed

So if I understand you correctly a small windows tablet running 8.1 could be used with the Dvap instead of configuring a raspberry pi2.

Just download the drivers like I did on my windows laptop and connect to a wifi source and I could be good to go. If that is the case That would be super. If you can add any other advice that would be great.

Thanks again. I won't hit the buy the pi button on amazon.

3763. DVAP and tablet purchase suggestions

Yahoo group: DVAPDongle
Date: 2015-05-29 02:15:27 UTC
From: Tom
Topic: 3714 Message: 3763

I’ve got a new 2m DVAP and travel quite a bit for work. I want to set up a hotspot in my car and tether to my cell phone for internet. I see a number of comments about using DVAPs with Windows 8 tablets.

Aside from the need for a full-size USB port, any suggestions on minimum requirements for the tablet (memory, speed, etc)? More importantly, are there any inexpensive Windows-based tablets that should NOT be used with a DVAP (and why not)?

Finally, do the tablets have a separate charging port aside from the USB port? I need to know if the tablet and DVAP can handle a 6+ hours on the road per day without a recharge when using it with an ID-51a HT.

Research Raspberry Pi as they are a fraction the cost of a tablet. Draw much less power and are bulletproof once up and running. Good luck..

Hi Tom,

Microsoft stores & online have the HP Stream 7 for $79 and the Stream 8 for $149. These both run the full Windows 8.1 OS and they include Office 365. Since they can run the Office suite apps, DVAPTool should run fine, once the appropriate driver is installed. They will function through an OTG adapter, thus allowing access through a full size USB connector. There are OTG Y adapters that allow concurrent charging and access. I have the Stream 7 and find it to be a nice, solid unit with a good screen that is an awesome value. The Stream 7 screen will look a bit sharper than the Stream 8 because they share the same resolution. There are other Windows 8.1 tablets online at the MS store that offer a bit more RAM & drive space, but they are nowhere near the value the Stream 7 is. I haven't tried running DVAPTool on it, but I know many are doing what you intend to using a basic RPi.

It doesn’t matter which frequencies you try, the radio and the DVAP must match. Also, when testing, you probably want to make sure that the radio is on low power and that you keep the DVAP and radio about a yard apart.

Brad,

I’ll agree that Pis are great options. But by the time you add a case and a battery to a Pi, some of the $70 tablets represent a much better deal. And many of the tablet have probably equal or better power consumption.

A DVAP Velcro’d to the back of a tablet makes a very nice self-contained package.

Topic: 3714 Message: 3769

Thanks, Brad, but I've already rejected a R-Pi for my purposes for several reasons:

1) Form factor – too thick after shields and/or framework are added for it to fit easily into a briefcase for airline transport. I have room to fit another tablet into my briefcase, even if I have my laptop and an iPad for work (can't load DVAP software on company computer assets).

2) TSA issues – anything that looks home-brewed to TSA is immediately scrutinized at length, especially if it has an antenna. Pretty much nullifies the Pre-Check fast security lines at airports. Another tablet wouldn't raise an eyebrow. HTs and antennae are common enough to not raise issues.

I usually fly to an area for work, then spend a number of days traveling around that region in a car. My needs are for something low-profile, low-cost, and easy to adapt to DVAP use. The R-Pi requires something like DHAP, DHAP Mini or other framework and custom boot images, which would further increase costs. I'm looking for something under $100 and easily replaced if broken or stolen, hence my questions. I'm wondering if the 8" or 7" Win8 tablets are sufficient for DVAP use. Some are now being sold at prices between $35 -$70.

-Tom

> Research Raspberry Pi as they are a fraction the cost of a tablet. Draw much less power and are bulletproof once up and running. Good luck..

I bought a WinBook TW-700 and works great. I get 4+ hours of battery operation. My wall charger malfunctioned some 50 days after purchase, because I charged it while powered on, I suspect.

Hi Tom
Per Ed's advice I am using a 7" Winbook tablet running win 8.1 that i bought at MicroCenter for $60. It has a full usb port, decent battery life of about 6 hours and comes with 1 year of Office 365 (a $99 value). All i did was download Bonjour and then the DVAP tool, connected and it runs seamlessly. Total startup was about 10 minutes.

Best of luck in your quest.73AlKE0CCFColorado Springs

Hi Ed and Group
Here is my follow up for Friday at 10AM MST.
Robin AA4RC from DVAP contacted me after I emailed DVAP support@.... He assisted with the recalibration of my DVAP. It appears that altitude change (6400 feet in Colorado) may have caused the frequency deviation. He walked me through using the DVAP utilities tool (from DVAP web site) to recalibrate the DVAP which was slightly off frequency.

He was super and spent a great deal of time with me as we tweaked the DVAP.

Awesome Customer Support! My DVAP is spot on now.
My many thanks to Robin and ED and the Group.
73s to all of you. I need to connect to some reflectors now. Have a fantastic weekend.

I have been using Raspberry Pi’s for D Star on my home network and
Mobile with a DVAP and hot-spot.
I purchased a Win Book 10.1 tablet with Win 8.1 op. system.
When I plug the DVAP or the DV3K dongles into the USB port
The tablet cannot connect “Found new Hardware” does not appear.
I downloaded the drivers as shown on the DV3K website.
Tried the DVAP and DV3K on boot up and with the tablet running.
No success.
Any ideas would be greatly appreciated.

Presumably a powered USB hub would allow both. A non powered dual usb hub would allow one conenction for power and one for the DVAP (although you would be better off using a power only cable if using a PC to charge so it doesnt steal the (presumably) single COM port. I have one of those super cheap win8 7 inch tablets - sometimes it sees the DVAP - sometimes it doesnt. And it loses wifi frequently and for no apparent reason.... but it was cheap :)

My 7inch win tablet runs for less than an hour with the dvap connected so for serious use you do need to charge as well. The mini usb works - there are mini usb plug to regular USB socket adaptors which also let you put thumb drives and keyboards on the the tablet by the way.

3777. DVAP data usage on a hotspot?

Yahoo group: DVAPDongle
Date: 2015-05-31 23:47:05 UTC
From: Tom
Topic: 3714 Message: 3777

Anyone know how much data is being used hourly if a DVAP is being used to monitor a busy reflector like 30C or 01C? Assuming that you’re responding on a QSO less than 25% of the time, any guess on how much data is being used up on your hotspot?

Alternatively, is there an easy way to check data usage myself when my DVAP is connected to my home computer?

From: ab8wl@...
Topic: 3778 Message: 3778

Hello World, I have for sale my complete D-Star package!! Everything included to get you up and running on the air quickly!! Package includes the following: Icom ID-51A handheld transceiver in original box with manual, antenna, battery, charging cable, silicon case, nifty manual, rtsystems programming software with programming cable, everything is in very good like new condition the box for the ID-51A is missing the barcode and I do not remember why. ID-51A has been full reseted so you receive it just as I did when I bought it. I have never used the original antenna and I have always had a piece of cell phone screen protector on the screen (you may be able to see my poor cut to fit job in the photos but it works). Package also includes: ID-31A handheld transceiver in original box with manual, antenna, battery, charging cable, nifty manual, rtsystems programming software (no cable this time as both radios use the same cable) this radio has also been full reseted. WAIT THERE IS MORE: DVAP DV Access Point Dongle 70cm (440mhz version will work with both radios) includes original box, antenna, right angle antenna adaptor, and usb cable. Still one more thing... to get you going straight away I am including a Raspberry Pi version b with power supply, case and SD card PRE-LOADED TO RUN DVAP SOFTWARE WHEN POWERED ON! all you will need to do is power up the raspberry pi, connect it to your network, put in your call sign and choice of 70cm frequency in the dvap software that will auto run when the raspberry pi starts up and of course plug in the dvap to the raspberry pi then program your radios and you are on the air. (YOU MUST REGISTER WITH D-STAR COMMUNITY BEFORE YOU CAN GET ON THE AIR). I will ship only to continental united states address via fedex or ups (my choosing) but Shipping is free!! Paypal payment only. There are no warranties or returns. Happy bidding! Thanks for viewing my auction!

you can view the auction here:

Thanks Tom,

I downloaded Bonjour-no joy- Finally read your post,(again) downloaded the DV tool software,
DVAP Dongle up and running in 7" and 10.1" Winbook Tablets.
Thanks for you post, saved me a lot of time. But I really like the challenge of D Star,
It's not easy to get DVAP's RASPi"s and Cell phone Hotspots working, but it's ,worth it.

3783. Timeout after 17 seconds - Missed keepalive from gateway

Yahoo group: DVAPDongle
Date: 2015-06-02 17:58:07 UTC
From: nc6k@...
Topic: 3783 Message: 3783

Hi all,

I've seen similar issues, but no real solutions to my problem. I just got a 440 MHz DVAP dongle, and it works fine via my home WiFi for 17 seconds, then a series of 10 "missed keepalive from gateway, count = #" and then "dstar gateway timeout", and I'm disconnected. This happens on several gateways, even if someone is talking. I'm guessing it's my Dlink router/gateway, but not sure what to change on it to stop this from happening. The Dlink is connected via Ethernet cable (i.e., not WiFi) to my PC, which is connected to my USB DVAP dongle, so it's obviously not a WiFi thing.

I'd really appreciate any help anyone could provide.

Thanks!

Eric NC6K

3786. No Gateways found - check Internet connection

Yahoo group: DVAPDongle
Date: 2015-06-06 08:36:51 UTC
From: Jeremy J Barbouttis
Topic: 3786 Message: 3786

I have decided to use my wife’s mac with DVAP Tools to use my DVAP on, and it worked for a while then stopped suddenly.

Since then, whenever I try to run the program, it says no gateways found, check Internet connection.

Problem is the Internet connection is good, and it still connects to the Internet, but it just won’t connect to any reflectors, because none of the gateways were found.

I have tried all of the usual things, like rebooting, but it just won’t work.

What could be the problem?

Run the DVAPtool in a terminal window:- open Terminal app on Mac- cd /Applications/DVAPTool.app/Contents/Mac\ OS- ./DVAPTool
This will then output troubleshooting info to the terminal window, which may give a clue.
Note I may have misspelled some of names above, so you may need to adjust to match what you actually see on your system.

3790. Getting DVAPTool to work in Ubuntu 15.04 64bit

Yahoo group: DVAPDongle
Date: 2015-06-16 05:53:29 UTC
From: kb8ild@...
Topic: 3790 Message: 3790

Greetings Fellow DVAP users.

I'm having trouble getting the DVAPTool for linux to work inside the 64bit version of Ubuntu. Here's what I'm getting when trying to start the tool.

./DVAPTool: error while loading shared libraries: libpng12.so.0: cannot open shared object file: No such file or directory

What do I need to install via apt-get in order to get this file?

Also, is there a chance that the DVAPTool will ever be moved over to 64bit?

Thanks and 73's
Ray

You need to follow the directions in the readme file that is included with the package. It takes you step by step through adding the required libraries as well as the other steps that you need to take in order to get it up and running. The file even includes the required commands to type into the terminal.

3792. Re: [DVAPDongle] Getting DVAPTool to work in Ubuntu 15.04 64bit

Yahoo group: DVAPDongle
Date: 2015-06-16 21:47:25 UTC
From: kb8ild@...
Topic: 3790 Message: 3792

Jeff,

I'm well aware of the readme file in the compressed folder. I have read this file and ia32-libs is no longer a part of Ubuntu 15.04 64bit. THis is also why I ask if there will be a 64bit version of the software as well. Yes, I know a raspi is cheaper but I have my laptop out constantly for other things and it would be easier for me to just plug in the DVAP directly into it.

I know that most of the ham community doesn't change their OS often, but we need to keep the programs that we use up to date as well.

Any other help besides read the readme file will be greatly appreciated.

Hard to say about the 64 bit version. AA4RC will be more able to give information if he is going to release one.

What steps have you tried thus far? Maybe hearing what you already tried can help to narrow down the issue.

From: Matthew Pitts
Topic: 3790 Message: 3794

Jeff,
The issue is that Ubuntu 64 bit OS installations don't provide an option to use 32 bit applications anymore, from what I've heard. The assumption is that any software that's being developed now should be able to be compiled for 62 bit OS instead of a 32 bit one, even though many developers and users don't bother with it.

Matthew,

Actually, To install 32bit versions of a package, just append the :i386 to the end of it and it should install. Currently, I'm working on a shell script that will go through and update your system and then download DVAPTools for Linux and then install the correct packages for DVAPTools to run on a 64bit system.

3799. DVAP Overload

Yahoo group: DVAPDongle
Date: 2015-07-06 23:07:44 UTC
From: ahr10023@...
Topic: 3799 Message: 3799

I'm using the 440 DVAP with the Pi 2 and DStar Commander software. It's all working fine except the DVAP seems unusually sensitive to overloading from my ICOM 31A running at the lowest power rating. There needs to be about six feet of distance between the 31A and the DVAP before the overload situation is cleared. I've tried moving the DVAP several feet away from the Pi and am using ferrite beads on all leads but six feet seems to be the minimum distance to prevent overloading. I'd appreciate hearing anyone's experience in dealing with this.
Thanks, Alan, K2RHK

Perhaps a dummy load (either on the radio or the DVAP)?

You’re at the very lowest power setting (100 mW) of the ID-31A? There are 4 power levels.

From: AB4WSNEWS
Topic: 3799 Message: 3801

I have experienced this as well, even some with the DVMega board. I have found both are susceptible to RF interference from electronic devices in close proximity to the DVAP, or DVMEGA (mounted on the Pi). I have found putting the Pi, DVAP, DVMEGA, as far away from anything else, (other radios, computers, etc.) seems to correct this issue for me. Also connecting the Pi VIA wire as opposed to wireless connection, improves performance and RF issues as well.

Hope this helps!

Topic: 3806 Message: 3807

I ordered one of the original DHAP’s from Hardened Power. That unit came with a Raspberry Pi and imaged SD card with DVAPTools already on the card. It was a snap to setup and worked like a charm. Thought I would transfer that same image to a micro SD card and use on the new Raspberry Pi B+ but I am still working on getting it to load. I spoke with Bill at Hardened Power and he suggested Maryland DStar as a good source for an imaged card. I expect my DHAP Mini tomorrow. I have learned a lot about Star but still struggle with the Pi.

I have that problem too. At home I just set up the DVAP and RzPi in a spare bedroom away from where I normally operate. When I'm traveling it is more of a problem because hotel rooms are too small to allow getting far enough away. I think the dummy load is probably a good idea. I wonder what the folks who are running mobile are doing? My car is pretty small, too.

Most DVAP distributions now support the Pi model 2. There's the "DStar Commander", the "Maryland DStar Image" (google these) and they're based on the G4KLX base software which is available at: http://westerndstar.co.uk/ http://westerndstar.co.uk/

There's also my image at http://kdj.metro-uhf.org/dvap/ http://kdj.metro-uhf.org/dvap/ but that requires some manual configuration and may not be a good choice for newbies.

I received my Mini last Saturday but unfortunately the components do not align properly and the top will not close. Am returning it today. I know Bill will make it right but believe I will wait until more units are distributed. Best way to reach Bill is by phone, never had any success with a return or answered email. 73 Jim N4ZYX

3814. DVAP Freezing after several minutes

Yahoo group: DVAPDongle
Date: 2015-07-14 16:56:29 UTC
From: pughwj@...
Topic: 3814 Message: 3814

Forgive me if this has been asked and answered before. I reviewed topic history and could not find one quite like this.

I'm running the DVAP with the latest software version on a new MacBook Pro, Retina display with OSX 10.10.4.

The DVAP starts up properly and runs OK for several minutes before freezing up. I can still see inbound activity on the screen but cannot hear any audio. The DVAP is unresponsive to any over-the-air commands. I try a force disconnect, but the Mac still shows the app as not responding.

I can completely shut down DVAPTool and restart, and it will just do it all over again.

I have already disabled AppNap for this program, to no avail.

The DVAP works fine on another Mac (Mavericks) as well as my RPi2.

Any ideas ?

Thanks & 73,

Warren

John,

You'll be using the ID-51 in simplex (non-DR) mode, but you'll still need to program the 'Your Call Sign' fields in the ID-51. I don't have a cable so I program in the CS-51 software, write it to a micro SD card, then read it into the HT from the card.

I currently have all the reflectors that I normally access programmed into the Your Call Sign fields (e.g. REF001CL, REF030CL, etc). You should already have the standard Your Calls in the fields also (i.e.: CQCQCQ, U, I, and E with the appropriate spacing). You will also want to program in the DVAP-specific Your Calls (DVAP***I, DVAP***E), where * denotes a space. I have about 40 of the 200 available fields of Your Call Sign filled.

To use the DVAP (assuming that it is accessing the internet and the comm port in the DVAP software is Open), select an unused frequency on the DVAP software and dial in the same frequency on your ID-51 and change to DV mode. I prefer to turn off dual watch, so only one frequency is showing up on the screen of the ID-51. You may want to turn down the ID-51 output when using the DVAP, depending on how far away it is from your HT. I generally use SLO unless I'm in the back yard.

If you're in DR mode, toggle it off by holding down the bottom of the 4-way switch labeled 'DR.' Now hold down the right side of the 4-way switch labeled 'CS' to show your call signs. The R1 and R1 fields should be blank and the MY field should show your call sign. Highlight the UR field and press either the center of the 4-way or the right side of the 4-way to select the field. Highlight 'Your Call Sign' and press the center or right side of the 4-way again to show the available calls programmed above. Highlight and select the appropriate call using the center of the 4-way. Back out of the menus by pressing the left side of the 4-way.

Connect to a reflector, change back to CQCQCQ and do the QSO thing. Lather, rinse, repeat. J

Good luck and we'll see you on the reflectors!

73,

Tom, KK4VWX

Aloha,

Sounds familiar. Please let us know what you find when you receive a replacement.

There were a number of quality issues with both of the original model DHAP's that I received:

1) both units, the pi board mounting screws were extremely loose...there was at least 5/32" between the spacer blocks and the chassis base. Both screws, on both units.
2) first unit, the spring pins did not align properly, making it difficult to secure the top properly without tweaking the top.
3) second unit, on arrival, the usb cables were both plugged into one stack on the board, which caused the cable connector closest to the board to interfere with other components, preventing proper closure of the top. The first unit had the cables plugged into separate stacks, and farthest from the board, allowing plenty of clearance for the cables.
4) the second unit has a component on the small power supply board that appears to have interfered with the pivot of the chassis and was bent over. The same component on the first unit appears to be mounted a full quarter inch closer to the board.
5) both units have gaps that appear uneven around the top cover, and it feels like there is interference when opening the top, although perhaps that is by design...it is not clear to me.
6) When I initially opened the first unit, I found two bare conductor wire clippings, approximately 1/32" in length, loose in the bottom of the case.
7) The RCA jack on the first unit spins in the housing, and would very quickly break the wire connection to it. The jack in the second unit rotates partially, if you twist at all while inserting / removing a cable.
8) The first unit never output a signal to the monitor connected via the rca jack. It appeared there was a missed connection, as a bare wire end could be seen embedded in silicone near the jack.
9) When second unit was received, the SD card was transferred from the first unit, and it would not fully boot the system. It would only reach a point where the DVAP's green light would start pulsing (which never occurred with the first unit).

As yet, no word on when the "new and improved" mini will be shipped to me.

I decided to return my DHAP Mini and wait until the design is perfected. I really miss the convenience and portability of the DHAP.

Topic: 3806 Message: 3824

I received my version last week. There was one issue I had, and that was getting a set of batteries. I ordered the expensive 18650 batteries with builtin protection, and they do not fit the battery holders. That note was posted on the site but I missed it. My unit is functioning properly, with a PI2. I do not believe that Bill will be shipping an image. I have modified the Maryland DSTAR Image for members of our club, and it loaded just fine. Unit works as advertised. I have the MiniMega Version, and have a DVAP version on order. I am talking with Bill to offer a version of his Mini-DHAP to use my LCD display software. He is considering it.

I just put in some plain 18650's like Bill recommends and the unit is running just fine. It's currently just running on the 4 18650's installed. I am using supposedly 3400 mAh batteries, so that gives me 6.8 Ah of power. I am currently trying to determine how long it will run for on batteries. I haven't taken any measurements but I am guessing a couple of days non-stop.

Do not expect the case to be smooth and polished, the are printed and that process does not lend itself to the same finish you get from an injection molded process.

I really like the design, of this. It fits in the armrest of my car, and also in my briefcase, unlike the original DHAP. Monday I will see about it making it through TSA at an airport

One thing I noticed, when you change from line power to battery power the pi will reboot. You do not want to charge 18650 batteries except with an approved charger, so Hardened Power disconnects the 18650's from the circuit when the coaxial connector is plugged in. It's a break before make, which is good, since I use an innergy portable power brick meant for charging laptops 117VAC/12V Auto/24VDC Airplane I bought on closeout at MicroCenter for $10. It shows 19VDC when connected. This would fry the batteries. I am thinking of fitting a 250 uF to 500 uF very small electrolytic capacitor across the output of the 5V DC Buck converter just top hold power to the unit during the switch.

To be fair other than talking about some technology stuff with Bill and sharing some ideas, I have no association with Hardened power. Just a satisfied customer to order another one of the Mini-DHAPS. I have seen all kinds of manner of packaging a hotspot, DVAP, power, and a Pi. Some pretty nice, some for my taste pretty crappy. This packaging suits my needs for mobile, portable, ARES, Incident Management needs pretty good. The unit is not especially weatherproof, for all terrain/weather/marine use, but it was not advertised to be. A baggie will work, but I am not sure about heat dissipation issues. Its got the portability issues pegged. The rest is what experimentation is about.

Jim,

There are a lot of images out there, but I use the Maryland Dstar image, though it needs a few things added for my taste. Some of them are clean up some are a matter of taste. I prefer the new LXDE with the "start" menu button, quick launch, and time on the top rather than the bottom. I found their sendipaddress.py to need some work, and generally updated the OS to a newer version, added Microsoft RDC so I can desktop easily from my laptop, desktop, iPad, iPhone, and android tablet. I also added Occi from adafruit to allow me to simply switch wifi sources from my hotspot to my home by reusing the switch function built into the remote, so all I have to do is kerchunk my ID-51 to switch from the car to the house I also added my LCD Display software that basically shows what you see on the screen of the ID51 but is easier for me to read. That said they have the best getting started and configuration documentation around. Another version is DSTAR Commander which stays with an older version of essentially the same software for stability sake. Depending on your comfort level your choice, makes very little difference and the image you download from their www.marylanddstar.org http://www.marylanddstar.org will work just fine without my little mods. A couple of other people using other images out there that were having trouble switch to the MD DSTAR image and commented that it install quick and easy. Hope you get on easily and fun no matter what you choose.

What software (where is it?) do I need to program a mini SD card for use in a Raspberry pi?

This for using a UHF dvap dongle as a simplex hotspot.

Have my 5100 mobile working, HH-51a is fine, can hear reflector 14 c okay, cannot make contact with it via HH radio. Thought I'd build a hotspot to cure this issue.

If I'm on the right (or wrong) track here, tell me so, give me any usable pointers I might need.

Am finding the world of DV radio *really* interesting and useful.

Note: Everyone this is a long post.... but he asked and I though it might be useful to others if not please excuse the electrons demolished in the process..... :-)

Jim,
here is what I did....Well start with the Maryland Dstar image. Download their setup document.
don't forget to do a to start with
sudo apt-get update

I use a 16GB SD card which is overkill but it is only $1 than the 8GB and I never have to worry about the logs overflowing. I cary two copies with me, one in the PI and a backup copy, that I can use. You only get about 100,000 writes to a memory location and since the Pi uses the SD card for a disk eventually it will "wear out" Also powering up and down the Pi has been known to cause disk errors. in the file /etc/rc.local I put the following command

sudo touch /forcefsck
which forces a root level repair of the disk on every boot. It will extend your boot time about 20 Secs, but it may fix the boot drive instead of crapping out. Also the first thing I do is set the root password. Raspian is released without a root user password. If the boot disk has an error the console will ask for the root password. If you don't set one, you will have to image the disk over again. Far easier to do a
sudo passwd root
and enter a password for the root user.

BTW to find your IP Address from the console, helps if you use a keyboard and HDMI for initial boot just enter:
hostname -I <==== That's Capital Letter I

Also I do a sudo raspi-config and set the pi boot shell to console. I find it better for maintenance, when I log in using rdc (more on that later) I then get the graphical console.

Then once you get it loaded and booted, I use the Ada Fruit Find My Pi Software. It's document is here.... adafruit/Adafruit-Pi-Finder
https://github.com/adafruit/Adafruit-Pi-Finder

https://github.com/adafruit/Adafruit-Pi-Finder

adafruit/Adafruit-Pi-Finder https://github.com/adafruit/Adafruit-Pi-Finder Find and set up your brand new Raspberry Pi. Contribute to Adafruit-Pi-Finder development by creating an account on GitHub.

View on github.com https://github.com/adafruit/Adafruit-Pi-Finder
Preview by Yahoo

The OS X version loaded perfectly and its a snap to use, a friend seems to have problems with the windows version. If this is the case and not the user, you may want to contact

Adafruit, they are on the web. Anyway, plug your pi into power with a running copy of the DSTAR software, and an ethernet connection, and the software finds your pi. You can run an SSH session from their window to do the rest of the setup. Fill out the form, and click on bootstrap and most of the software will be loaded for you. as well as the basics for the wifi switcher. If you can't get it to load here is this document:

adafruit/Adafruit-Occidentalis https://github.com/adafruit/Adafruit-Occidentalis

with a downloadable curl script to do the job for you....

https://github.com/adafruit/Adafruit-Occidentalis

adafruit/Adafruit-Occidentalis https://github.com/adafruit/Adafruit-Occidentalis
Adafruit-Occidentalis - A collection of drivers, configuration utilities, and other useful things for single-board computers from Adafruit

View on github.com https://github.com/adafruit/Adafruit-Occidentalis
Preview by Yahoo

which will load the following software:

I find it makes life easier instead of pulling the SD card copying things over to it from your laptop/desktop or transferring with ftp /sftp/winscp etc to load the following on your pi.
You should then see the pi on your network as a server, and if you mount the home directory you can copy directly from your laptop/desktop. If you want this load the following software onto the Pi

avahi-deamon This posts the system name as a unique net work name
(i.e.. hostname raspberrypi is on the network as raspberry.local)
then you don’t have to know the IP Address just use the <hostname>.local as the address

netatalk This puts a copy of apple’s “bonjour” program on the pi, so it shows up in the network
computers listing.
You may need to load bonjour on your Windows machine but it comes with iTunes if that is loaded.
you can find it here if you need it. Bonjour Print Services for Windows v2.0.2
https://support.apple.com/kb/DL999?locale=en_US

Bonjour Print Services for Windows v2.0.2 https://support.apple.com/kb/DL999?locale=en_US
Bonjour Print Services for Windows lets you discover and configure Bonjour-enabled printers from your Windows computer using the Bonjour Printer Wizard.

View on support.apple.com https://support.apple.com/kb/DL999?locale=en_US
Preview by Yahoo

The FAQ is located here>
https://developer.apple.com/bonjour/index.html
https://developer.apple.com/bonjour/index.html

node, tmux, vim, Development tools and libraries
git

ic2-tools, Tools to use the hardware for an LCD display
python-smbus

samba, Software that allows windows, and other systems to transfer files between systems. Already on your windows system at least OS X & Windows
samba-common-bin

or to do it in one shot.....
sudo apt-get -y install avahi-deamon netetalk node tmux vim git samba samba-common-bin

Next I like to use Microsoft's Remote Desktop Client, the respective app stores have free downloads of the app for OS X, IOS, and Android. While you are at it download the iOS or Android version of ircDDBRemote, we will get to that later. Notice I didn't give you a source for a Windows machine that is because Microsoft has been shipping it standard with windows since XP Pro. Just search for Remote desktop and create a desktop shortcut. I have uploaded a writeup Using Remote Desktop on your Pi to the files section of this group documenting this. I think it is simpler to use than VNC, so I load this instead. To load the server on your Pi:
sudo apt-get install -y tightvncserver xrdp

to change to the new GUI with the Menu on the top that comes with the new version of raspian you can do this.
I did the
sudo apt-get update
sudo apt-get dist-upgrade
first, but I wanted the latest version of the OS then I did
sudo apt-get install -y raspberrypi-ui-mods
to get the new interface.....

When you installed Occidentalis, it loaded a file in the /boot partition which is FAT formatted, and readable on your laptop called /boot/occidentalis.txt. When you boot a program called occi is run, which reads the file and sets your hostname to the hostname in the file and the wifi to lock onto from the the SSID and password of the WiFi Network listed in the file. Since this file is stored in the /boot partition you can load the SD card into a reader and edit this file on your desktop/laptop to change. Jonathon Naylor's very fine software ircDDBgateway and dummy repeater will respond to remote commands, including commands sent from your HT, more on this below.

The Maryland DSTAR Group in their setup document explains how to setup your handheld to reboot or shut down the Pi with a Kerchunk. In there is a switch command, that is used for the Dual Frequency DV Mega to swap from UHF to VHF and back with you can hijack and replace the shell script with your own that will copy of version of the /boot/occidentalis.txt from a pair of identical files called phone.txt, and home.txt containing the respective SSID and password to /boot/occidentalis.txt and then reboot the system casing it to switch wifi networks when kerchunked.

The ircDDB Remote software that I suggested you download from your App Store fro your mobile device can be set up to switch the Pi to a reflector/repeater instead of turning the dial to unlink, then to the memory containing the link command, then to talk. Instead you can disconnect (Unlink) and connect to a reflector/repeater from your mobile device and leave the radio on talk (CQCQCQ). Personally I find this simpler.

This has been long, I know but the changes IMHO make the system easier to use especially when driving. Now the Mini-DHAP goes into my center console, the HT speaker plugs into the "iPod/MP3 player" input to the car system, and with a remote mike clipped to my shirt I have a neat clean package that minimizes the distracted driving problems. It's very livable for me, but YMMV! Take what you want and enjoy/ignore the rest, but most of the guys in my ham club using DSTAR on the Pi seem to like the setup.

73,
Barry, K0BSB

From: kc4yoz@...
Topic: 3826 Message: 3831

Hi Gary;

First of all, you need to fix your registration. You're missing a "space" terminal. Go to the W6CX registration server, add a new terminal (under Personal information), check the box to the left of a new record, hit the space bar in the "initial" field, put your callsign in the "pcname" field and hit the Update button. That should get you talking on REF014.

Now download an image file. The Maryland Image and D-Star Commander are the easiest to set up and use.

See http://maryland-dstar.org/html/raspiberry.html
http://maryland-dstar.org/html/raspiberry.html for the Maryland image....

See http://w6kd.boards.net/thread/2/dstar-commander-public-release-download/
http://w6kd.boards.net/thread/2/dstar-commander-public-release-download/ for info and links for D-Star Commander.

You'll need a(n) SD card for the Pi software, the software to write images to the card is here:

http://sourceforge.net/projects/win32diskimager/files/latest/download
http://sourceforge.net/projects/win32diskimager/files/latest/download
Have fun!

73;
Ken - KC4YOZ

Yes you can use the DVAP on a raspberry pi with easytether but you'll have to get a powered hub to run the phone through. The USB ports on the pi don't have the amperage to maintain or even charge a modern smartphone. The USB ports only produce 500ma and most phones need 1 - 2 amps for them to work correctly. I should also note that I have had problems burning out the port if I connect directly to the pi.

Let me know if you need further assistance

I just put my Samsung Note 4 in hotspot mode and my Pi connects via WiFi through Verizon Wireless. I have a few different WiFi hotspots programmed into the Pi and it just connects to the best signal in a priority order so when I leave the house it connects to the Note 4 as soon as I am out of the home Wifi signal. When I get to the local EOC I turn off my phone hotspot and the Pi connects to the guest EOC wifi hotspot I have programmed into the Pi.

I didn't do anything fancy to the Pi, just used the WiFi setup software that came on the Western D-Star image.

One limitation of using the Verizon wireless is that some of the ports I have open at home for things like xreflectors won't open on Verizon.

Topic: 3839 Message: 3839

So I am deciding what to buy, the DVAP or the DVDongle.
I want to be able to use the unit while in the car (with my ID-5100a) and at home (on my windows PC using a headset).
I was wondering if the DVAP can be used in this situation, or if i have to buy both?

3840. Re: [DVAPDongle] Use DVAP as a DV Dongle?

Yahoo group: DVAPDongle
Date: 2015-07-25 12:48:11 UTC
From: Fran Miele
Topic: 3839 Message: 3840

The DVAP only works with the use of a radio. The DVDONGLE needs a computer with a mic and speakers, but no radio. Neither will do both.

The DV Dongle has an AMBE chip, the DVAP does not. Thus the Dongle can handle A/D protocol conversions from analog waveforms (like your computer mic) to Digital Voice packets and vice-versa.

If you already have a DV device, like a D-Star radio, you need a DVAP, which copies DV packets from RF and hands them off to the software (which slaps some packet headers on and routes them into the Internet).

Two different tasks. For your requirements, you'll probably need both.

I am new to DV and its many ways of getting *it* done, the dongle will get you into D-Star reflectors from your computer, while the DVAP (think "Digital Voice Access Point") is what is used for a hotspot.

IE, in to the DVAP on a frequency other than the reflector's, but out to through the reflector. If you will, a simplex, personal, but not all too private repeater.

In my instance, I am using a 70cm DVAP hotspot to link me to my somewhat local reflector (ref 14c) with my Icom 51a HH.

For the readers of this forum, if I am incorrect, please say so, I am learning and enjoying the capabilites of DV and S-Star as fast as I can .

In my humble opinion, DVAP is much more versatile and I do not feel like it is really amateur radio unless it starts and ends with a physical radio. With DVAP, your initial TX is from a radio, then all the technological wonder of DSTAR which ends with a radio.....unless the recipient of the TX is using a DVDONGLE.

Robin,

Still cannot figure out what is going on. It still freezes up after anywhere from 5 to 20 minutes. Screen blanking doesn't seem to make a difference. AppNap is definitely disabled.

Running a 13" MacBook Pro, Retina display, OSX 10.10.4.

73,

Warren

3847. 0VAP Dongle Suddenly Quits

Yahoo group: DVAPDongle
Date: 2015-07-29 19:22:05 UTC
From: mack_cox@...
Topic: 3847 Message: 3847

Just got the driver and software loaded on my mac and PC. Successfully had REF001C working for about an hour this morning.

Then suddenly it no longer worked. I've tried resetting and rebooting everything to no avail. The blue light is flashing on the dongle but nothing I do seems to have any effect.

Does anyone have any ideas?

When you plug it in, the green LED should slowly pulse. If it doesn't that is usually an indicator that the drivers are not installed. If you feel that the unit has hardware issues, you can return it for replacement, or send it to me for a checkup.

Thanks for all the replies to my DVAP overload post.Keeping the DVAP as far as possible from the Pi helps, as well as keeping the ambient RFI down. One suggestion was to try different 31A/DVAP simplex frequencies, which I haven't yet done. It's worth a try. Alan, K2RHK

Robin,

I think I have this figured out.

In addition to App Nap, Yosemite has additional battery saving features.

In both Battery and AC Adapter modes, it has provisions to shut off the hard drives when possible and to put the computer to sleep once the display blanks out. In both modes, you can disable the "shut down the hard drives" but only in AC power mode can you disable putting the PC to sleep once the display blanks.

Therefore, the workaround is to run the DVAP only when plugged in to AC power, and to disable putting the PC to sleep once the display goes out. I tested this quite a bit today and think it is the cure.

I didn't test extending the display bank out period to "never" and try on battery mode, but maybe someone else has done that. Not a great solution since it would go through batteries quicker.

Cheers,

Warren Pugh

Uncheck the locked callsign box, exit the program, restart it.
I intend to leave my Hotspot uncheched, therefore, "open" to those who might use it. And , you can see this via the dos box record.

Gary,

Thanks, did not work.
I unchecked the "call sign lock,"
Selected File, Exit in the upper left corner of the Tool dialogue box.
Then Shut Down.

When I powered up, it was checked again. Must be in the code somewhere.

I would like to leave my hotspot off when I am not home, flip the power on, and have it boot correctly. Now I have to leave the monitor and keyboard attached each time I turn it on to make the change.

Maybe it is asking too much of the DV Tools program, and I need to burn an Rpi/DVAP SD. Would like to avoid doing that if I could make DVAP Tools work.

George, W5SCX

You don't have to burn a whole new image. You can install the components themselves. It's just easier using premade images.

Update...

On August 12 I received my second replacement for the original DHAP, the new version DHAP Mini. Another disappointment!

The 3D printed case was was not trimmed or checked on assembly...the HDMI port was partially blocked by excess material that I had to trim out. Not a big deal, just sloppy.

The four Ultrafire 18650 6000 mAh batteries included with the new unit were put on the charger until full charge was indicated, then installed in the case. Immediately one of the battery retaining tabs snapped off, apparently printed too thin. I then turned on the Mini DHAP power switch, with the device connected through an HDMI cable to my tv. Voltage showing on the DHAP meter was 8.28, and the DVAP was unable to power up. A brief search on Ultrafire batteries quickly revealed a history of problems and misleading claims. It remains to be seen if the ones I received are just fake, or bad fakes.

I will spend some time this weekend locating enough batteries to power up to the 12v it needs and see if I can get the system to actually boot and operate.

In addition to these issues, I had to purchase a 7" monitor with RCA inputs, and a USB hub to attach to the earlier style DHAP I originally ordered, but these are useless for the Mini DHAP. It has USB ports accessible on the outside, and no RCA video out. So, about $100 wasted on accessories I cannot use, and it is now over 5 months since my order for the original DHAP was paid for, yet I am still not operational. At least the Rii keyboard can still be used...once I actually get the system booted up.

I would think with the earlier issues that I had that this company would have fully bench tested the third device to ensure a satisfied customer, but it seems they have no interest. I have never received a return email or phone call from them. Seems more like a part time hobby operation rather than a "Made in the USA" manufacturer.

Hardened Power can take the blame for the 3D Printing Issues, but the 18650 battery problems are no more Hardened Power's fault than your car battery going flat because you lent your car to your nephew and he parked it over night with the lights on. 18650’s coming from China, use recycled material, and even though they are rated at 3000 mAh - 6000 mAh most will be lucky to deliver between 1800 - 2200 mAh. The better batteries and the most expensive contain power circuits to prevent discharge, or over charge. They just don’t fit the space in the battery compartment as they are longer than the standard 18650’s. I got into that trap, when I ordered the batteries just after I ordered the DHAP. When the unit came a week or two later I found out. I checked the web site, and it was noted that there were size issues preventing the 18650’s with battery protection circuits from fitting documented on the web site. My Bad, back to Amazon. If you read the reviews on the UltraFires you would find out that many reviewers told of batteries failing, and that they don’t charge to “rated Power” I bought Japanese 18650s that would fit, and even though they are rated at 3400 mAh my charger reads that they will only produce 2800 mAh on a full charge, discharge, charge cycle. Don’t buy the $2 chargers either, I like the form factor, because they are great for portability, but if you read the reviews the batteries are likely to catch fire because they have no protection circuits. The reviewers there all caution that they are okay of you constantly watch them. Not my needs and definitely not my style, I spent $30 for a quality charger. If you are getting parts on the cheap from China ($0.29US batteries and $2 Chargers on Amazon) Caveat Emptor.

Also don’t blame Hardened Power, because you don’t bother to read the manual of your Raspberry Pi (yes the Pi2’s all have a manual packed in the box). The DHAP was deigned for a RPi model 2 which had a composite video out on a RCA Phono Jack. The DHAP Mini uses either an RPI B+ or an RPi2 which moved the Composite Video to “stereo” jack with one side mono audio out, and video on the other side. Before you start rising people tighten up the nut behind the keyboard, and RTFM. So get out your soldering iron, and make a patch cable.

I have always found Bill to be very responsive to customer problems, at least mine, and open to suggestions for improvements.

I agree the HDMI Jack opening required me to get in there with an exacto knife and do a little trimming. I suspect that the first couple of layers printed on the top of the opening were still warm, and sagged a bit. I have seen this problem before in some other cases I had 3D printed. I was going to suggest an improvement. Also I agree that there is a bit of flashing or a rough area in one of the corners, and I am thinking about putting a piece of plexi or lexan covering the status light whole near the SD card opening, just to keep dust out of the case, but with the SD Card opening it probably won’t make much of an effect.

Richard,

I recently put together a youtube video that addresses some of the same issues you are having. I had the same issue with the battery retainer tab and I was able to track down the issue with the HDMI port not lining up. I remedied this issue myself and I explain what I did to fix it in the video. Not ideal but I was able to make it work.

Hardened Power Systems DHAP Mini Review https://www.youtube.com/watch?v=9Wi2514tBJg

https://www.youtube.com/watch?v=9Wi2514tBJg

Hardened Power Systems DHAP Mini Review https://www.youtube.com/watch?v=9Wi2514tBJg This is a practical review of the Hardened Power Systems Digital Ham Access Point (DHAP) Mini. More information about the DHAP Mini can be found here: http:/...

View on www.youtube.com https://www.youtube.com/watch?v=9Wi2514tBJg
Preview by Yahoo

I have not contacted Hardened Power Systems about this but it might be useful to do so. They may not know what is causing the poor alignment of the HDMI port due to the size of the cable and the screw for the foot of the device. They are likely just dry fitting the Raspberry Pi without plugging in the cable. Either that or the Raspberry Pi 2 may have the power plug located slightly higher on the board. Feel free to pass this video along to them if you like. They may be able to make an adjustment or source a different cable to remedy the situation.

I have not had the problem you have with the battery voltage. Two of these batteries in parallel will yield 7.4 volts in theory (3.7v x 2). Mine are showing just over 8 (8.25 V) when fully charged. I can run off of 2 or 4 batteries without issue. The Raspberry Pi only requires 5V at a recommended 1.8 Amps.

I also had to return my DHAP Mini but received a prompt refund. The top would not close with batteries inserted, bridge piece broke, and usb inputs did not align. Was really looking forward to the Mini but decided to wait and purchase when initials problems are resolved. The original DHAP was well built and rock solid.

Richard:

I know that the Hardened Power people had a problem with a fire in their plant a few months ago; not sure if this affected your wait time. It convinced me not to order a second one from them because I had a long wait time on the one I ordered. I suspect that they are simply having growing pains. I know that it’s hard to feel compassion when the product is pricey, and I’m not making any excuses for them (because I don’t even know them). I have had my DHAP now for more than a year and it has worked well, except for one thing.

That RCA input monitor you talked about…. I can’t find one anywhere. And I tried Amazon, Best Buy, and a few other places trying to find one. So… since you don’t need it… do you want to sell it? I’d be willing to buy it.

I had not seen the mini-DHAP, but my experience with anything mini (except my car by that name) has not been stellar. Sounds like a serious issue with the batteries. I hope you get it worked out to your satisfaction.

I know I’ll be interested in hearing how the unit performs once you get it up and running. I would buy another one of these units if I could count on high quality and better-than-average battery life. My maximum battery life on the DHAP has been about 6 hours of continuous use.

Thanks for sharing your experiences.

Hi All
I'm not sure if this issue was discussed before. But purchasde a DVAP, Raspberry PI and Verizon Wireless MIFI. I'm able to connect to the reflextor using my Comcast WIFI, and ethernet connection.
When I connect to my MIFI and to a reflextor, sometimes I hear other stations, but most times I dont. I've confirmed there are people talking on the reflextors. Has anyone had this people and know how to fix it?

Thanks 73's

This afternoon I received a comment on my video from Bill KK4JPT at Hardened Power. He posted the following:

One of the benefits of 3D printing the housing is that we are continuously improving the master CAD files that are printed. We have reduced the boss height that interfered with your USB connection to the Pi, and we have altered the battery well design to stop the small piece from being weak.

It sounds like Bill and team are making some good improvements based on user feedback.

I do this all the time. I use the Tenda 150 dongle on a Pi2. Sometimes it is a little twitchy hooking up to the MyFi, but 90% of the time it works. I usually figure out when it doesn’t there is a DNS problem. Have had best luck configuring the Pi to use OpenDNS DNS Servers or Googles. Hope that helps….

Aloha,

Thanks for your response, and nice job on the video! I have determined the batteries are ok, and that 8+ v is normal for this unit. I made a wrong assumption comparing to the earlier model, and lacking any kind of reference material just did not realize it operates at a lower voltage than the earlier model. I still am concerned with the reviews regarding the Ultrafire 6000 mAh batteries that I was provided, but will let time be the judge of them ultimately.

Aloha,

Apparently the audio jack next to the HDMI on the Rpi B+ doubles as composite video out with the proper plug and wiring, so for now I will keep it, although the Mini DHAP will not provide the 12+ v out like the original DHAP. Not sure if I will end up keeping it or not. There are plenty available on Amazon or wherever, just search for 12v monitor 7 inch and sort to the lowest price. It was around $50...many have two sets of RCA inputs, one for a backup camera, the other for your in vehicle DVR.

I am looking forward to getting the Mini DHAP operational, seems like a great solution IF I can get it functioning as advertised.

Aloha,

The DHAP rev2 that I originally ordered was shipped complete, minus the DVAP that just needed to be plugged in. It was represented to require no more than power up, configure the wifi, and you are on the air. When powered up, it showed 12+v on the display. The DHAP Mini, as offered, does not include batteries, Rpi, or SD card. In his effort to resolve my issues with two DHAP's being non-operational, Bill sent an assembled DHAP mini, and four Ultrafire 6000 batteries. All I should have needed to do was plug in the DVAP.

There was NO documentation, of any kind, for any component, or for initial setup with any of the three units I received. This implies to me (as did the HPS website) that you connect your peripherals, power up, and you should reasonably expect the unit to work. That was not the case with either of the two DHAP's or the Mini DHAP that I have received.

I did initially assume (incorrectly) that the voltage would be similar on the Mini, but after testing each battery provided I did find they all were at 4+ volts after initial charge. The manner in which they are connected in fact produces 8+ volts. Time will tell how long they last under operating condition. This does not diminish my concern regarding the many online reports of the Ultrafire brand of battery provided, with specific mention that the 6000 mAh rating that these particular batteries claim is not currently attainable.

This actually brings up another issue, in that the earlier model DHAP allowed for charging of the battery pack in place. As I understand at this time, the Mini DHAP does not have this feature, in fact I believe you have to completely remove the batteries to charge them. In light of the earlier issue noted with the battery retainers, this will obviously become very problematic.

Your comments regarding the composite video / stereo jack are accurate. I learned this after spending an additional $20 for a decent Rpi manual (not to mention another $30 for an HDMI cable that I thought I needed because of no obvious RCA jack or any labeling whatsoever), because, as I said, NOTHING was included for reference.

Amazingly, I also learned from this manual, that a simple change to the config.txt file would magically allow my HDMI to work, so I could actually see the system boot process. I was also able to learn where and how to download a new Raspbian OS onto a spare micro SD card, and when I swapped it with the non-booting HPS provided SD card and image, PRESTO! I was actually able to reach the full desktop for the first time. Apparently there is still an issue with the HPS image file, but it will take time to sort it out further. I likely will find it easier to use the new image and learn how to set it up to operate headless from square one. I can actually muddle through fairly well WHEN I have a manual to read.

I realize that any computer / any operating system cannot be expected to work with any possible combination of peripherals, but all the more reason to include some useful documentation and troubleshooting tips with what is actually a fairly complex device. Or at least suggest "some assembly required". No doubt that is why the Rpi is NOT included with the "new and improved" Mini DHAP now.

As I stated in an earlier post, Bill is nice enough to talk with, when you reach him, and he has tried to resolve the issue, but the effort is pretty weak. My original order was placed March 4, shipped 4/21; replacement shipped 5/5; received an automated notice on July 20 that the third device "has been shipped"; I actually received it August 12.

To my way of thinking, email is by far the easiest and best form of business communication. It does not require you to be concerned about differing time zones; it takes literally seconds to knock out a brief update for customer service issues; and properly handled should keep "hot" issues at the top of your task list. I have never received an email or returned call from the company. Frankly, I do not understand why the second and third devices were not bench tested and closely scrutinized for quality control, given that they were replacements for prior defective units.

3875. Re: Dvap Mini SD image question

Yahoo group: DVAPDongle
Date: 2015-08-18 13:39:59 UTC
From: Barry Berg
Topic: 3806 Message: 3875

Richard,

You most likely will never charge the Mini-DHAP batteries in the case. They are 18650's LiON batteries, which are used in a slightly different form factor to make Laptop Battery packs. As such they require special electronics and regulation to ensure that the batteries do not get over voltage or over charged. If they do they overheat, causing some 3rd degree burning in the past for some laptop owners, and actually catching fire. The Li in LiON is Lithium, a metal similar to Magnesium, with the same HAZMAT characteristics, hence the warning on the batteries not to dispose of improperly, and the fire danger. In fact if you ordered them shipped, they require special labeling and handling during shipping. Airlines now have regulations on carrying LiON batteries in checked luggage, you have to tape them, or put them in protective cases. I bought 8 batteries, and 4 cases, the cases were only a couple buck each… so I can fly them around with me. The airline regulations, usually printed in the back of the seat pocket magazine, that no body usually reads, goes on to say that it is okay to pack them in devices powered by them. I assume because the airlines assume that installed in the device they were meant to power, they would not short, and present a fire danger. Just because people do not read the fine print does not exempt them from observing laws and regulations. Just saw a video on the news last night, about a woman in first class, who refused Flight Attendant instruction to put her in cabin pet, a dog, in its carrier under the seat. An altercation ensued, and she was asked to leave the aircraft, She refused, and the police were called, they asked her once to leave the airplane, then she and her dog were taken off the aircraft and arrested. Video showed her taken off the aircraft in handcuffs. This is handled by that often heard in safety briefings, again which everybody ignores stating something like "...failure to follow crew instructions or tampering with the bathroom smoke detectors is a violation of FAA regulations." Anyway these batteries deliver exceptional life, and power but they do require responsible handling.

I doubt that a built in charging circuit would fit in the enclosure, and like I previously mentioned need a better charge. These are the ones that I previously mentioned as to not having charging protection circuits. http://www.amazon.com/Generic-Rechargeable-Li-Ion-Battery-Charger/dp/B004B1BR24 The one I bought though not terribly expensive is this one http://www.amazon.com/Nitecore-D4-Rechargeable-EdisonBright-converters/dp/B00L108SAW/ref=pd_sim_23_12?ie=UTF8&refRID=1MPEXX1ZJ0F79HHHS9P3 which will do 4 at once and I feel comfortable leaving it unattended while charging it. This is a little smaller and does 2 LiONs is here http://www.amazon.com/i2-2014-Intellicharge-EdisonBright-converters/dp/B00KBEJ6SC/ref=pd_sim_23_9?ie=UTF8&refRID=1S12FBG8JEMPANG2QENQ. As you can see they are physically larger than the DHAP mini.

The weakest point as far as I am concerned is the 90 degree sma connector included with the DVAP. I have replaced two of them so far, and while they are inexpensive they seem to separate at the crimp. Evidently carriage in a backpack is too hard on them. This is a disadvantage of the miniDHAP verses the DHAP, but size and portability do not come without some penalty. I recently removed the 90 degree sma connector and threw it after it broke again, and switched the antenna to a Midol 3" gumdrop antenna to keep the strain off the rather fragile DVAP sma connector. If anyone has a better idea, please let me know. Right

now the mini DHAP is plugged into the 12V outlet inside the armrest of my car (batteries removed) and the the ID 51, which stows in the pocket of my card door, no antennas, or other indications saying please break in an rip me off when I park during the day. it works, but the antenna has a bend to it I would rather not have.

Aloha,

Good to know about the batteries, mahalo. Although I definitely like the smaller form factor of the Mini DHAP, the functionality seems to be quite different from the earlier model. Being able to charge the batteries from the power port, OR power a 12v monitor from the port, was pretty significant. Assuming I get the Mini functioning, my usual operation would be on battery, portable, so this is two steps backwards for me.

Richard,

It depends, when you jack 9v+ into the coaxial power port it disconnects the batteries by taking them out of circuit. They will keep their charge for quite a bit, just like your laptop/phone/tablet does, as that is a characteristic of LiON’s. I use my system mobile a lot, so I just carry the batteries in their cases for when I step out of the vehicle, and run it from the 12V accessory (read cig lighter adapter) A simple splice of another coaxial connector paralleling the one to power the DHAP-MINI would power your display.

It'll depend on how often you use it, but when I took an IRLP nano-node to London, UK in May, I got a prepaid local SIM card for it and I used about 100 MB in a week.

Updates of your node will be the most bandwidth-hungry application, but you can do that at home If you want to save bandwidth.

Yes you can use the DVAP on a raspberry pi with easytether but you'll have to get a powered hub to run the phone through. The USB ports on the pi don't have the amperage to maintain or even charge a modern smartphone. The USB ports only produce 500ma and most phones need 1 - 2 amps for them to work correctly. I should also note that I have had problems burning out the port if I connect directly to the pi.

Let me know if you need further assistance

73,

Verizon has a hotspot with a large battery that can run /charge other devices while in use.

This would be the JetPack MiFi 6020C priced at $199 or $50 w/contract.

It may be available under a different model /name from another carrier.

This should meet your needs.

Chip,

You have piqued my interest as to why you don't get anything on the Pi or why it's so erratic. Here's what I need to know from you.

Which Version of the pi you have B, B+, Pi 2, etc
Which OS you are running
Which version of Android you have running on your phone or what you are trying to get to work with the pi.

I have all three versions of the pi so I can test this out with my Note 3.

Also, if you can post what you are typing into the terminal to get the pi to work with easytether. I want to try to get this working for you.

Ray,

First, let me tell you a little more. I am trying to get the Galaxy S6 phone running 5.1.1 Android to simply provide internet connectivity to my Windows 8 tablet. I have not been able to do that so I have not tried the Pi yet.

I have several Pi versions. I would be using a model B running either DSTAR Commander or the Maryland DSTAR distribution. I also have a generation 2 DHAP also running a B model Pi.

My first challenge is to get the phone to provide connectivity. Then I will move to the Pi. What should I see on the phone that would indicate that it is working? Or what should I do or see on the tablet?

Chip

Which Version of the pi you have B, B+, Pi 2, etc
Which OS you are running
Which version of Android you have running on your phone or what you are trying to get to work with the pi.

I have all three versions of the pi so I can test this out with my Note 3.

Also, if you can post what you are typing into the terminal to get the pi to work with easytether. I want to try to get this working for you.

Hi

Thanks for the read back on the MIFI and DNS, I got it to work most of the time.

I decided to purchase a Raspberry Pi V2 board to use with my DVAP Dongle after reviewing the speed. Do you happen to know if there's a release out there that I can use with the V2 board and DVAP Dongle?

Thanks and 73's

Just wanted to add my 2 cents. There is an app called foxfi. It turns your phone into a mobile Hotspot so you don't have to buy another "thing with a plan" from your phone company. If you have 4G it will still make phone calls and Internet at the same time. Up to 33 ft from the phone and the internet still works. You can set up a password just like your home Hotspot/WiFi so no one else will connect to it unless you give them the password. I've had 3 phones, a tablet, and 2 computers at the same time with no slow down on 4G from Verizon. Feel free to email me with any questions. I know I will have questions when I get my dv dongle so I can figure out how to use it. Thanks

look into any of the later nexus devices, easy to root, doesnt void your warranty to do so, and you can use the default app in the phone for hotspot access with no trouble.
to further note, I have used foxfi before. It's not terrible, but it does require a lockscreen, and it sets up a temporary vpn to fool the default hotspot into working.

Foxfi also doesn't work on some phones in Wi-Fi mode, due to various factors up to and including carriers blocking activation of the app. While there are workarounds for that, I'm highly considering spending good money on a Cradlepoint Router with 4G to handle what I'll need to do in the future.

True your phone will not be able to connect to a wifi you will only be able to use your 3g or 4G from your provider whIle the app is in use. And yes you have to have a lockscreen and a vpn. I have been using it on my Motorola razor max and now my Samsung s5 for 3+ years. 10, 20, and 30+ gigabytes a month without any problems. Just need to keep it plugged in to the wall charger not computer usb because the computer doesn't produce enough amps to trump the power used from the phone and data use.

I have only uses on the 2 phones I stated above I have no idea if this app or how this app works with LG or other brand of phones.

Thanks, Zach

I started to measure my data usage

DVAP connected to a Pi
extra iPhone with everything I could turn off that uses data. It is setup to tether on a Ting account.

I recorded a local D-STAR net twice. Each runs for a few hours on Thursday night on ref12A using this setup.

I added all the audio files together to get a total talk time and decided the MB used to get the usage per minute of talk time.

for a 272 min net it used 51 MB of data thats about 192K per min

would be great if someone else could validate my results.

I'm having a similar issue under 10.11.1 (El Cap). Quitting the app (DVAPtool) and restarting fixes the issue, but it's a royal pain. Anyone figured this out yet?

I'm running on AC power and the display doesn't necessarily have to shut down. The machine is definitely not going into Sleep Mode.

3905. DVAP and DVAPtool works, then dies under El Capitan

Topic: 3905 Message: 3905

Recently installed a DVAPdongle and DVAPtool, and it works great for about 20-35 minutes, then gets hung saying it's "Listening to K4ICP" (my callsign). I then have to quit and restart the program, which is no big deal if I am in the room with it, but a bit of an inconvenience if not.

Is anyone having this issue, and if so, how can we fix it?

It looks like there may be an FTDI USB driver issue with El Capitan. Apple now includes their own FTDI driver natively in the O/S. Try this:

Open a terminal window and type:

```
sudo kextunload -b com.FTDI.driver.FTDIUSBSerialDriver
```

Then unplug and replug your DVAP.

Let me know if that makes a difference.

Turning off app nap won't prevent this in OSX versions after Mavericks 10.9. Both Yosemite and El Capitan have additional energy saving "features" that cause the DVAP to go to sleep. Part of the reason I reverted back to Mavericks and won't be upgrading until Apple decides to give end-users some control over this feature.

Topic: 3914 Message: 3914

I am getting ready to setup to operate DSTAR at a new QTH. Have both the red and blue dongles and hope to have an access point for my hand-talki and the ability to operate via a Mac and connect to DSTAR repeaters.

I am curious to know if one particular version of the Apple OS is better than another interns of a dedicated Mac to use in support of DSTARS? I am currently on an iMac with OS 10.9.5. I have resisted upgrading to a new OS, since what I have is good enough. But I could run DSTAR with a Mac mini server?

All thoughts and comments appreciated.

Hi Jerry,

The only terminal address you have is KG5JBC with a space for the 8th character. That is all you really need for most operations. If you use anything else such as for example, "KG5JBC A", that will put you in a receive only mode. If you want to use different suffixes with your call, you should add those terminal addresses where you registered. On another note, you requested registration at W4AES on the 26th. This post is dated the 25th. So probably your connection should work now that you have completed the registration process?

3918. DVAP and 92AD - Received signal intermittently interrupted

Yahoo group: DVAPDongle
Date: 2015-10-31 03:13:24 UTC
From: modnla@...
Topic: 3918 Message: 3918

Dear Forum---
I am running a brand new DVAP with my Icom 92AD, and have been encountering some problems. While listening to another station, the received transmission gets intermittently interrupted, and the beep will happen in the middle of the other station's transmission. With the terminal open on my PC while monitoring a reflector (REF001CL, for example), the terminal will read:
transmit state <ON>
transmit state <off>
transmit state<on> .. etc.

...this will happen multiple times while a given station is transmitting. I've made sure that the WX alerts are turned off. I've played around with some of the squelch settings. When I receive another station, I only get one red bar. Sometimes I can monitor for several minutes and this issue won't occur. Other times, it will happen multiple times in the span of less than a minute. It will even happen when a station is transmitting from a DVAP or Dongle, so I would assume their transmission wouldn't be interrupted by location/bad coverage etc. Anybody have any ideas? I have only had this DVAP for about two weeks. Thanks and 73s

3920. DR Memories with DVAP

Yahoo group: DVAPDongle
Date: 2015-11-10 06:57:16 UTC
From: mimmuz75@...
Topic: 3920 Message: 3920

Hey guys,
I'm having some trouble using the DR memories with my DVAP.

When I use the standard memories on my ID-51a+ I can connect, ask for system status, echo etc. without any problem but if I try to use the DR memories where I created a simplex entry for my DVAP I'm not able to do Echo Test or System Status (while connect/disconnect and CQ work without problems).

The issue seems to be that when I key for the Echo Test for example the DVAP is expecting:
hdr f 00:00:00 r2 DIRECT r1 DIRECT ur DVAP I my KK6WVK /ID51 fc dc1b OK

Starting ID request (DVAP I)

While what comes out from the radio is:
hdr f 00:00:00 r2 DIRECT r1 DIRECT ur I my KK6WVK /ID51 fc e1c1 OK
Transmitting to gateway (I)

so the DVAP returns "Unknown Command" cause the ur field is empty.

Given the fact that you are not able to add anything else in a DV simplex DR entry beside the name and the frequency, my guess is that I'm missing some field somewhere in the settings.

Any idea what this could be?
Thanks
Mimmo KK6WVK

3929. Re: NJ6N Raspbian DVAP Installer Updated

Yahoo group: DVAPDongle
Date: 2015-11-14 05:15:34 UTC
From: kc4cop2@...
Topic: 3088 Message: 3929

I am new to D-Star and a very new user of the DVAP Dongle. I have a telephone system in my Jeep. The Jeep telephone system uses my cell telephone (Android) and cell telephone number. I have an Internet data connection on my cell phone. The Jeep system does not make use of an independent telephone like I had in a Chevrolet. Can I use the DVAP Dongle with the system outlined above?

I have tried to install "Easytether" on my Android cell phone and I get an error message that says that the Easytether program is not compatible with my LG brand cell phone. Do you know if another telephone tethering system will work with the LG (Android) cell telephone?

3932. Problem with dropped recieve packets

Yahoo group: DVAPDongle
Date: 2015-11-21 02:32:02 UTC
From: kc4cop2@...
Topic: 3932 Message: 3932

I am consistently having packets dropped from received signals using D-Star reflectors. Transmitted signals are ok i.e. no dropped packets. Tried multiple reflectors.

Switched from satellite Internet service to cable.

Bought all new equipment since I first started having my problem. Purchased new desktop computer with multi-core CPU and 3+GHz clock. All new cable WiFi installation with 35 ms PING, 30 Mbps download speed and 6 Mbps upload speed. New high speed Internet modem and router.

Have changed USB ports on computer, changed cable from DVAP to computer, removed elbow from DVAP, put new antennas on ICOM ID-51A Anniversary model and new antenna on DVAP.

Tried DVAPTools 1.04 and WinDV. Same results with both programs and all of the changes I have listed above.

Set "squelch" (traditional) levels to "auto" and level "1".

Tried virtual COM port driver.

Equipment and software includes:

ICOM ID-51A Anniversary model; Dell Inspiron 3847 desktop - 7 core CPU at 3+ GHz; Windows 7 Pro; DVAP running DVAPTools 1.04 and WinDV programs.

Please help.

From: Jim MacKenzie
Topic: 3932 Message: 3934

If multiple reflectors have this issue, chances are the issue is either on your own local network or with your own Internet service provider.

Are there any local users that are using the Internet heavily (high definition video streaming, torrent downloading, etc.)? If so they may be using almost all of the bandwidth. That would make your inbound audio unreliable because there would not always be sufficient available bandwidth for the audio packets to arrive.

Yes it was, and I do apologize for any confusion my erroneous reply may have caused. In any case, be it a Windows based tablet or computing device, the connection to the phone would have to be via WiFi, so that you may still use your Jeep´s Bluetooth connection for the phone and the data portion would be shared with your computing devices.

After installation you double click on the DVAP icon on your desktop, fill in with your callsign and the appropiate COM port(usually COM3 under WIndows Operating System) and the simplex frequency you want to use it with your radio. Once all is filled you press the OPEN button that is beside the COM port dialog box and you should be set. You will get a message telling you have the latest version of DVAP Tool installed. After that you have to link and unlink via RF.

Hello, if possible try providing Internet to your equipment via your cellphone, as to verify that the latency involved with satellite Internet is causing problems. I could not use the satellite internet other than for sending emails and browsing web pages. Video streaming was frustrating. If your computing equipment is portable take it along to a place where public WiFi is available,this if you cannot provide Internet with your cellphone.

Terry,
It doesn't look like anyone has answered your question. The DVAP software will run on the Mac Mini just fine with any modern version of OSX, with a caveat. I run Mavericks on my Mac Mini and my MacBook Pro. I too have not upgraded, but for a very specific reason: Apple has disabled the end user's ability to easily disable App Nap in Yosemite and El Capitan. I won't be upgrading until that functionality is restored.

So, you'll be able to run a DVAP fine under your your system. Just remember to go to the "Get Info" item in the contextual menu and check the "Prevent App Nap" box, so that your DVAP won't be forced to nap by the OS.

I am running El Capitan and the ability to disable App NAP is there and just as easy to control as it ever was. It was just as easy in Yosemite as well. You simply go to the application folder in finder and right click on the application you want to change and select Get Info. The next to the last line in the general selection is a checkbox called "Prevent App Nap". Check the box, close the window and you are all done.

I am currently using El Capitan and the ability to disable the App Nap is still there and as simple as always. In fact, it was in Yosemite as well. I don't recall how to disable App Nap in Mavericks but here is how you do it on El Capitan (If I recall it was the same in Yosemite):

Using Finder go to your Applications folder.
Locate your DVAPTool.app file and right click (or Control-click) and you will get a list of options
Click on "Get Info" and the Get Info screen will appear.
Expand the "General" section if it's not already. In the general section you will see two check boxes. Click the checkbox next to "Prevent App Nap" Close the Get Info screen and you are done. You may need to close and reopen the DVAPTool application for the change to take effect. At this point, you are all done and DVAPTool is no longer go to sleep on you.

I am not sure what the difference is, but that box is not present on El Capitan for me either. It was there in Yosemite, but after upgrading it is not an option. However, the App Nap box is present in some of the other apps I have looked at. Since this isn't the first complaint I have seen about this, it seems we have a mystery here.

Hi Mike,

Do you have the latest drivers from FTDI? Maybe thats the issue?

The Terminal Window or DOS Window isn't available on the Mac version.

The com port is as you described.

I also run a Windows emulator, namely Parallels (now at version 11). I have a XP image that I use for radio programming my various ICOM D-STAR radios with. So you can have the best of both the Mac for all your needs and Windows for the few programs that don't exist in the Mac word.

I have been using a Mac Mini (late 2012), on Mountain Lion, Mavericks, Yosemite and now El Capitan with the DVAP/DV Dongles and apart from the Prevent App Nap (just need to turn that feature off) issue has worked great. If fact I too thought I had an issue with El Capitan until I remembered the Prevent App Nap fate upgrading the software and my DVAP has worked as it should.

Maybe you don't quite have the right driver? You have to be very careful to select the right on. I have a 2009 Mac Mini that worked ok. There was something else you had to deselect in OSX, but I can't recall what it was. I've since moved my DVAP to a Raspberry Pi to free up my mac. More compact & portable besides.

Another note: The 70cm DVAP gets better range due to a less used band. Mine seems to cover a large city block on the lowest power setting, and I'm on the lowest level of an apartment bldg. In a hole so-to-speak.

Mark,
I don't have any problem, since I no longer run anything past Mavericks. I suggest you Google App Nap and/or Yosemite and El Capitan and you'll find that you're very lucky to have App Nap functionality on your Mac. Lot's of people don't and Terry is not the first ham to have the issue. It may be that the functionality is there in some apps and not in others. I wasn't present in my DVAP app when I upgraded to Yosemite. I haven't upgraded to El Capitan on any of my Macs, but would like to. The loss of the prevent app nap functionality is the only reason I haven't. I'd welcome the return on the check box!

Sounds like it needs to be recalibrated. I know there is a program on windows to do it. Not sure about Mac. Try several frequencies on the dvap about 100 hz apart and see what results you get from the radio. If you get intellageable audio, that means you need to recalibrate the dvap.
Good luckKenKC2IDB

Yahoo group: DVAPDongle
Date: 2015-12-16 15:09:03 UTC
From: John Davis
Topic: 3955 Message: 3956

Are you including the module in the link command such as REF030CL? Sounds like you are using standard memories with your ID51a. If you use DR mode, it’s much easier to do linking and unlinking. If you need more info on using DR mode, let us know.

To: DVAPDongle@yahoogroups.com
Subject: [DVAPDongle] Cannot Link

I have a new DV Dongle on 2 meters with a ID51a. When I put a reflector in UR call with a L in the 8th place, I get a Reflector unlinked. Any ideas?

Thanks,

3957. New DVAP Maybe an experts here can help me make it work

Yahoo group: DVAPDongle
Date: 2015-12-17 01:02:41 UTC
From: cincair@...
Topic: 3957 Message: 3957

At first this looked easy, how wrong can you be?

So I have a red 70cm DVAP and an ICOM IC-7100. I know the IC-7100 should be able to use the DVAP as an access point to the D-Star network so how do you make them do it?

The first simple question is - I am registered on D-Star, do I also have to register the DVAP dongle as
mycall with an 'A' added in the 8th position? If where do you do it and how? The original registration was done by ICOM so I have no access to update it anyway.

In other words if I have registered already do I need to do any addition or modification to the original registration.

I think before I kn0ow that the following is just an indication of how frustrating this is.

The second is, after double clicking the dongle icom the DOS window and the DVAP tool window open then another in top saying No DV AP Dongle found! If you OK this then click OPEN, things happen then another window opens telling me I am running the latest version of the DVAPTool.

Very reassuring since if I OK that window it closes and just sits there with a few red dots going up and down under the squelch

The MY: UR: R1 & R2 remain undefined and does nothing.

Thank you.

Where are you located? In the U.S. you do not have to register the DVAP, in other countries you may. I'm wondering why you'd have no access to your registration, even if Icom did the registering.

You might try letting us know your callsign. I might make things a little easier.

Dennis,
The repeater needs a module to connect to next to the L
Example: W5HDR CL
Notice the space after the "R"

3961. DVAP no longer works using El Capitan OS

Yahoo group: DVAPDongle
Date: 2015-12-19 23:17:35 UTC
From: Michael Grace
Topic: 3961 Message: 3961

It started out working just fine, but no longer. The DVAP is no longer seen.
Reinstalled the FTDI driver files to no avail.
I know of and have the ‘app nap’ box checked off.

There is a reference to the need to install a library for D2XX, however it is WAY beyond my capacity to do this, simply looking at the instructions.

Can anyone help me out with this?

Thanks,
Mike

Just shooting in the dark but should it be W5HDR CL with a space after
HDR to make it 6 characters, then C and L in spaces 7 and 8?

Or do you even need the "C"? Could it be W6HDR space space L ?

3964. RE: [DVAPDongle] Connect to local repeater

Yahoo group: DVAPDongle
Date: 2015-12-20 08:31:44 UTC
From: Ralph Schutz
Topic: 3959 Message: 3964

Dennis, some repeater systems on D-Star do not allow for direct connect of dongles, either the DVAP or DV, you will need to ask the system admin about connections on that repeater. About support for the DVAP, Robin does check this and other groups from time to time and will respond to direct emails. Either the DStar Users or DStar info web site has some you tube videos on both the ID-51 and the DVAP. The DVAP web site does contain detailed instructions on how to get the DVAP up and running.

Try a space between the repeater and the module... as in "W5HDR CL"
If the callsign is less than 6 characters, you have to pad the callsign.

First of all, some repeaters will not allow connections from DVAPs etc, so check into that situation.

I think you also have to format it with the C (assuming you are trying to link to the 2m portion) next to the L such as this.

For all the people having problems linking to various reflectors/repeaters the "DSTAR calculator" is an invaluable tool for figuring out what you should be entering to get something to link etc.

DSTAR Web Calculator - D-STAR Info http://www.dstarinfo.com/dstar-web-calculator.aspx

DSTAR Web Calculator - D-STAR Info http://www.dstarinfo.com/dstar-web-calculator.aspx

View on www.dstarinfo.com http://www.dstarinfo.com/dstar-web-calculator.aspx
Preview by Yahoo

Also, if you own "RT SYSTEMS" software for your DSTAR radio, it will populate memories for you, based on what you are trying to connect to.

Guys,

Thanks for all the helpful info, but it must be the repeaters on the other side of town from me out of RF range will not allow DVAPs…. As I tried W5HDR CL (call sign space module and Link, filling the eight characters, direct in R1 and R2, with no success. Even the ones filling the eight characters like KF5KHMBL and putting direct in R1 and R2 gives me (no gateway found). Thanks so much for all the helpful ideas as now I know it is not my procedure… Hope to catch you guys on the Reflectors as that works fantastic !!!

Hi Dennis. I looked through the logs and your registration. You have only registered a "space" terminal in the gateway so you should always use a "space" in the 8th character of MYCALL on your radio and in the DVAPTool software. The logs show that you are using "WR5DC A ", "WR5DC A", and "WR5DC -A". Remove the "-" and the "A", and you should be good.

From: Raymond Larabee Jr
Topic: 3959 Message: 3989

I have no problem working any repeaters on my 70cm DVAP. What I do is a little different than what you are trying to do. I have two memory settings for a D-Star Repeater in Grand Rapids, MI called WX8GRR. So in my memory for my ID-51A I have a memory channel of WX8GRR L and another for the WX8GRR B and this connects me to the 70cm portion of this repeater. Try this and see if this works for you.

3990. DVAP Dongle stops communicating with El Capitan?

Yahoo group: DVAPDongle
Date: 2016-01-06 03:53:51 UTC
From: dale.puckett@...
Topic: 3990 Message: 3990

I was wondering if there are any other Mac OS X users out there. I just got a DVAP Dongle and managed to fire it up without any issues.

I've been waiting for my registration to come back for over a week but in the meantime I wanted to listen. While doing this I noticed that the unit would go inactive after about 10 minutes and/or when the screen would go to sleep.

I had forgotten about the "Prevent App Sleep" checkbox. Could this be the issue. I just checked it and will be listening for awhile tonight.

Are there any other tricks I should be aware of?

Thanks!

Hello. Everything is installed, blinking green light,etc.

Doesn't act like it's receiving data - all I see is a red signal strength bar when transmitting.

Flashing blue light on DVAP when everything is running .... nothing else.

Hi Dave. When you key up, do you see the MY/UR/RPT1/RPT2 fields with data from your radio? If not, you may need to calibrate the DVAP.

Let me know and I can walk you through that.

This issue has been discussed previously. The App Nap feature works differently in El Capitan and not having the "Prevent App Sleep" box unchecked is almost certainly related to your issue. I'll be interested in seeing if your having checked the app nap box solves the problem. I've avoided upgrading to El Capitan largely because of this issue. Please let us know if it works!

Good afternoon Bob
Yep you do have to put in a memory first use your simplex channel for dvap as a start then mode as DV and its GB7KH space BL The B is the mode 70cms and the L in 7th position is Link GB7KH BL
Have you got programming software and cable ??

Scott,

Checking the Prevent App Sleep checkbox appears to have cleared up the problem when receiving from a Reflector. I have not noticed the issue since checking the checkbox.

Unfortunately, I still have not been approved by the gateway sysop I registered with so I am in limbo as far as transmitting.

HI MY 1ST POST ON THE GROUP.

I have brought a S/H Red 70cm DVAP to use with a 7100

Think I've successfully loaded drivers on windows 7 and gained a USB Serial Port on COM6
Have tried changing Port Settings but made no difference

DvTool 1.04 sees the DVAP , clink OPEN and inputs freq. of 43150000
Blue blinking LED and that's it

No Tx from DVAP nothing heard 7100 set on 431.500 DV mode

When I Tx the 7100 the DVTool dashboard shows red signal Bar to Max.

4000. Re: No RF heard out of 70cm DVAP

Yahoo group: DVAPDongle

From: aa4rc@...
Topic: 3999 Message: 4000

You mentioned "43150000". There should be another "0" at the end to make it 9 digits (in Hz).

Try changing the frequency of the 7100 up/down 5/10 kHz while not changing the DVAP frequency in DVAPTool. Then key up. If you see the MY/UR/RPT1/RPT2 fields fill with data at one of those other frequencies, you will just need to recalibrate. Let me know in a direct email and I can walk you through that.

Some repeater owners do block connections from anything other than a reflector.
You might want to check with the trustee or ask your ham friend in that city if he/she can confirm.

You are not using a DVAP nor DV Dongle. Your device is unknown and was used to link multiple reflectors together which is not allowed. As a result, access was blocked.

You can contact me directly about this.

4013. DVTool 2.0 Not Finding Dongle

Yahoo group: DVAPDongle
Date: 2016-01-24 02:43:47 UTC
From: hammitjim@...
Topic: 4013 Message: 4013

Hello. I am running Windows 7. I purchased my dongle today and installed it without issue. I downloaded DVTool 1.4 and the tool found the dongle without issue on COM27. I then found out that DVTool 2.0 has more features. I uninstalled 1.4 and installed 2.0 and rebooted. When I open 2.0 it states it cannot find the dongle although the device manager shows it in place on COM27. I uninstalled driver and reinstalled with no change.

Then I uninstalled DVT 2.0 and installed DVT 1.4 and it found the dongle. Why doesn't 2.0 work for me and find the dongle? Any help would be appreciated.

Jim

Thanks Robin,

I am a newbie to this so hope I can impose on you for another question.

It looks like the DV Dongle and DV Access Point do the same functionality. Is that correct or am I missing something. I can't find any documentation on the difference.

My second part of this question is I am in fact using the DV Access Point and 1.04 DVAP Tool. I am able to connect to the dongle on 446.225 without issue. I can connect to the REF001C Reflector without issue. The problem I'm having is when I key the mic, I get the message "link currently established" every time I key. I'm unable to communicate. I'm sure it's me but I can't figure it out. Attached is my short DV setup list.

The DV Dongle and DV Access Point Dongle are two completely different devices. They do not have the same functionality.

As for getting "link currently established", you need to change URCALL from the link command to "CQCQCQ " to talk.

Hi, Robin.

The DVTool Installer that is on the DV Dongle website points to version 2.0 of DVTool. In your previous message I thought you mentioned to Jim that version 2.1 was the latest but I could have been mistaken. Thank you for the clarification.

I do have a question however. Is it possible in a future release of DVAP Tool and DVTool to enable us to place a call sign in the UR field for call sign routing between dongles and dvaps? This is one feature that is available in another software package that is compatible with the devices, however there is a problem. When running that software and DVTool or DVAPTool side by side with 2 different devices, DVTool decodes perfectly where the other software from time to time will have R2D2 issues on the exact same signal. So when we need call sign routing between two stations and not wanting to tie up a reflector with a long conversation, we use the alternative software package. However since DVTool and DVAPTool tends to work more reliably, I would much rather use the software that is intended for the device instead of a 3rd party option.

Thank you again for all of the work in bringing us a dstar solution that would otherwise keep people from enjoying this aspect of the hobby.

What Robin is saying is that once you have connected, put CQCQCQ back in the UrCall; that should allow you to transmit to the DVAP and have it pass the data to the reflector.

Hi Rodney, your main problem is that you're registered on TWO gateways, KD0LUX and NU7TS. Your other problem is that you don't have a space terminal registered at either gateway.

1. Delete your registration from ONE of these gateways.

2. Log in at the other gateway and complete your registration. Follow the cookbook at the following link, starting at Step 8.

http://www.dstargateway.org/D-Star_Registration.html
http://www.dstargateway.org/D-Star_Registration.html

That should get your D-Star network stuff going.

I just bought a 70CM DVAP, no matter what freq I use the software 1.04 only sees when I key up my volume, the red lines go up but never see call sign or ur are nothing, I have tried it on a mac , windows 7 and windows 10 just want work, it seems the dap see the radio key up because of the red volume lines going up, I see others on here say needs to be recalibrate but I don't see how to do that on the software, so is there another version I need to download, Thanks for any help

Jeff

4029. Data Burst audio while using DVAP

Yahoo group: DVAPDongle

From: jeromecp@...
Topic: 4029 Message: 4029
Attachments: 1 described; binary payloads are missing from this source WARC

Hello Robin,
We have been attempting to get an ID51 Plus to work on a 2M DVAP and a Raspberry Pi. My set-up is exactly the same and works without issue. The other set-up does not and creates a data burst for audio output as you can hear from the attached video. I have swapped all external gear and we still get the noise. Any thoughts?
Thanks,
Craig - K4CPJ

Hi Craig. Can you verify that the 2M DVAP works properly on a PC? Is the RPi identical to the one that works? Can you take the sd card from the one that works and plug it into the one that doesn't?

Hi Robin,
The noise in the file we attached follows the DVAP. Same noise on the Pi, Mac or PC. Yes we did use the SD card from the working Pi as well and the same issue. I think the DVAP is the issue? Maybe the recalibrate application is the next thing to look at? The firmware matches on the working DVAP b the way.
Thanks,
Craig

From: aa4rc@...
Topic: 4029 Message: 4032

When running on the PC, do you see the MY/UR/R1/R2 fields fill in when you key up? If you do not and you see the signal strength meter value go up, it might be a calibration issue. In that case, change the frequency in DVAPTool up/down 5/10 kHz while not changing the radio frequency and key up. If you see the data fields with this test, then a simple recalibration is in order.

Hi,
I am new to the group and I have just recently dipped my toe in the water that is D-Star. I have purchased an Icom ID-5100e and a DVAPDongle to try and access the big wide world. As I live in Southern Ireland and there is a distinct lack of activity down here (count zero repeaters!) I have been forced down the DVAPDongle route.
The story so far is that I have registered my call on a repeater (GB7WC) and configured my DVD with my call (EI2HWB A), a 2m frequency (145375000) and all connects to my 5100 swimmingly. I set up my from on the 5100 as Simplex/2m Calling 145.375 and on the To I am able to link to Reflector or so it says, but I cannot here anyone and echo tests come back in the DVD command window as ignoring transmit whilst not connected??? I know there is probably something really simple that I am not doing and I only need that single piece to fall into place, can anyone help? I have included the bottom half of my command screen that may help in diagnosing the issue... thank you in advance.

Cheers
Andy EI2HWB

Reflector 10 may not have been available when you tried. It would show a connected message and play a connected audio message if it linked.

Try REF001 or REF030. Don't forget to change back to "CQCQCQ " in urcall once connected.

Also, if you were trying an echo test, use "DVAP___E" instead of "_______E".

Topic: 4036 Message: 4036

My DVAP was running perfectly yesterday and now, I am not able to connect to any Reflectors. My DVAP connect, blue light flashes. ASCP device is started and that is as far as I get. I was so enjoying my DVAP! I have tried uninstalling and reinstalling and still not working. I still see my squelch level indicator show activity.

Any suggestions. Thanks!

Topic: 4034 Message: 4037

Thanks Robin,

I received some valuable assistance over BookFace and it transpired that the DVAPDongle was off frequency. It seems this is a common problem and a gentle tweak with the calibration using DVAPutil did the trick. So I am now able to link to a reflector and talk with folks there... Here is a real newbie question though, are we limited to the reflectors? The reason I ask is that I moved to Ireland a few years ago and many of my old radio buddies are still in the UK in the North West. As there are no repeaters over here it is not easy to link up to them and the reflectors only seem to go into hubs. I do not seem to know how to connect to a gateway or repeater in the UK... am I missing something here? Don't get me wrong... after a number of years on HF this is a real leap forward for me and I would like to get the most of it if possible.

Thanks

Andy EI2HWB

From: n0zld@...
Topic: 4042 Message: 4042

I just got my DVAP today in the mail, yay! I plan to have it run connected to my internal server. The issue is, it doesn't appear to be designed to run silently.

Firstly, when it starts up, you have to click the 'open' button. How about a checkbox next to it that says something like, 'Automatically connect to last known COM port'? I don't intend to unplug it ever. In the event the server gets rebooted and the COM port changes, DVAPTool could just not connect. Maybe write a log?

After clicking the open button, a message box comes up informing me I'm running the latest version, to which I have to click ok.

Personally, I'd like to run it as a Windows service running under the SYSTEM account. I can create the service installer, I just need to know the command line to run silently.

Well I figured out that it was the SD card. I got a new one and it works fine. Just a little more complicated than I was expecting during set up.

I printed out the same document and followed step by step. Just some things didn't make sense to me. I guess I'll give it another go and see if I can get it right.

Well, I discovered -open and -nolock by reading through some previous posts.

Robin - any chance you can publish an updated Windows version that..

- Disables the "Dstar name server text message" on startup?
- Supports hiding the GUI and show only the console window?
- Allow form resizing on the GUI window?

4046. ICOM ID-880 and DVAP Not Communicating

Yahoo group: DVAPDongle
Date: 2016-03-01 07:34:29 UTC
From: hammitjim@...
Topic: 4046 Message: 4046

Hello,

I'm hoping this is simple for the experts here so here goes. I currently have a DVAP attached to a Pi. It works great. I currently use it on my IC-7100 and ID-51A without any issues.

Today I bought a ID-880H and utilizing RT-Systems software and cable programmed my repeater frequencies and D-Star reflectors. I am unable to connect to the DVAP i.e. no response heard from Unlink or Echo.

Thinking I did something wrong I copied all my reflectors and information from the ID-51A RT-Systems and copied it into the ID-880H RT-Systems and sent to radio with no success.

The 880 works well on 2 meter and 70 cm so I don't think it's the radio. The DVAP is the 70 cm version and as said before, runs well on my other radios.

My last effort was to clear the radio and reload the information from RT-Systems with no success.

Any ideas?

Thanks - Jim

I don't know the RT systems s/w but I believe your problem lies in trying to use data from the ID51 in the IC880. I recently bought an 880 and used the Icom s/w which required a switch of model number, from my old E80D handy, in the settings before starting to load the data. My ID51 data is in a separate file and I wouldn't try using that on the 880.

I suggest you try using the Icom s/w to load a few test settings. I.e. your DVAP as a simplex repeater and maybe a local repeater if you have one together with some "UR" settings. I would be surprised if that doesn't work unless you have a fault in the radio.

Good luck and 73

4058. DVAP, Rasp (Jessi image) and Android

Yahoo group: DVAPDongle
Date: 2016-03-14 14:51:44 UTC
From: allister_mclane@...
Topic: 4058 Message: 4058

Hello,

I have the following problem.

DVAP, Rasp (actual Jessi image from Westerndstar) and my home wlan no problems to work. Replacing the home wlan with an Iphone with hotspot setup no problems too. Replacing the Iphone (my wifes handy) with my Android handy (Samsung S6 edge) with hotspot and mobile data transfer available it is not possible to work with DVAP (and DVmega as well, so it seems not a problem of the DVAP). I can connect with the rasp and the Samsung to go into the internet but not with the software for the DVAP/DVmega

I can see at the screen after pressing the PTT the message "linking to xxxxxxxx" but there is no further process like "linked to xxxxx" as with the home Wlan or Iphone.

So my question - perhaps a problem with the linux image (may be missing drivers etc) or a problem with Android ?

Many thanks for any assistance

73 Rolf, DC1ZZ

Good morning from sunny Indiana, USA. Is anyone using a Surface Pro 3 (Windows 10 Pro) and a DVAP? I loaded DVAP Tool 1.04 on the Surface today and the control display is extremely compressed while (at the same time) the black screen is very large.

No doubt, these conditions are possibly due to the Surface's HD screen configuration. Any thoughts are greatly appreciated. Best 73s de K9XT

John Deegan

I have a DVAP up and running on a raspberry pi. I know it's working because at one point I was able to create a connection between it and link to refoo3cl. I listened to it for quite some time. My problem is I an unable to program my radio to use the dongle. I have searched for info on the topic but have come up empty handed. Can anyone point me in the direction of help learning to program the radio for DVAP use? The manual is quite clear about repeater operation but nothing about DVAP. Thanks in advance for your help.

You should add under Repeater Group (where you can find Africa, Asia etc) a new group let say "Simplex" and within this new group new entries let say 2m or 70cm or something else. Then you have to enter within the 2m (I assume you will have the 2m red dongle ?) a simplex frequency corresponding with the frequency you entered within the setup of the DVAP software on the Rasp (for example images from Westerndstar) .

This frequency is then the "From" entry at DR.. Then you can move to "To" and can move to any repeater, reflector etc. by "linking to ....." and then "Use" CQ CQ CQ ....

Best is to program the ID-51 with a software on the PC and the SD card of the ID-51 using the ICOM software. (See ICOM download site)

From: frastephen@...
Topic: 4066 Message: 4066

Dear Group,

I have had my DVAP for quite a while. Ran it with the MAC version of the DVAP software, and then later ran it on a Raspberry PI using the DVAPTool software. Other than, in time, the frequency being off by about 5 kHz, all has been OK.

Recently, I have tried using some of the various flavors of the Raspberry PI distro's (Dstar Commander & the MD distro). I notice using these versions of software that the DVAP will run for some period of time … hours, or days … and then at some point I get a seeming solid RED led (it might be described as blinking REALLY fast) and perhaps other blinking LED"s and the DVAP is transmitting constantly. In that state I notice that on my IC-80AD the "FM" and "DV" icons are blinking … And it will stay in that state until I reboot the Raspberry PI.

Any thoughts?

Happy Easter!

Regards,
Stephen

What software are you running on the Raspberry Pi?
If it's in your budget RT systems cable and software $49.00 will help you with the programming.

I can also send you pointers, once you figure it out it's pretty easy.

It's me again!

I just want to add some details to my previous post…

The DVAP running on the MD DSTAR distro "crashed" (not sure what the right word would be) … This time a solid RED, a solid YELLOW and a blinking BLUE LED …. When I listen to the signal on the IC-80AD in FM mode it sounds like a signal, with no audio.

Again, looking for insight …

Thanks!

Best Regards,

Steve/W3SMK

You can save the money for a RT system. Remove your Micro-SD-Card from the ID-51, put it into a SD to Micro-SD adapter and the the complete adapter into your card reader/writer of your PC (only windows). Then download the cloning software for your model from the ICOM download site. After programming you put the Micro SD card again into your ID-51, after starting the ID-51 you have to go into menue, others, and reading the new files you have programmed before. That's all.

Yes, you can save money and not buy the RT systems software and cable.
But the Icom software does not have built in DSTAR calculator to help you
program that I know of.

Nothing wrong with the "Free" Icom software, it just does not do all the
stuff the RT Systems software is capable of.

4073. DVAP connects normally to some repeaters but RX only on others

Yahoo group: DVAPDongle
Date: 2016-03-29 02:02:33 UTC
From: trjeep@...
Topic: 4073 Message: 4073

I am using a 70cm DVAP and ID51 (original) HT. I can connect to reflectors with no problems and some repeater gateways with no problems. Some repeater gateways will respond with rx only connection. Anyone seen this issue before? I'm using DVAP Tool and have verified the symptoms with either Win 10 laptop or DVAP/Ras PI setup. I tried the DV Node for Windows software and can link to a repeater gateway that the DVAP Tool software only links in RX only mode. Kind of stumped on this one.

Thanks for any suggestions.

Tony KI4OHI

Topic: 4073 Message: 4074

Just a thought... but gateway admins can restrict incoming connections to a list of DVAP/Dongle serial numbers... which (I'm sure) is supported by DVAPTool, perhaps not by DV Node.

Post an example gateway callsign which is consistently RO for you and let me try it from here.

Ok, time for an update. I got the RT Systems software and was able to get the radio programmed for DAVP use. I did notice that the most complete Youtube video I saw for the software didn't include instructions for DVAP use. It was enough info to get me started though. I am loving having the radio up and running. I've yet to make a contact but listening out quite a bit. I'm thinking about stetting another one up for mobile use. Thanks so much for all your help. 73 Doug

4076. D-STAR InfoCon returns to Dayton

Yahoo group: DVAPDongle
Date: 2016-04-04 23:02:52 UTC
From: wb4qdx@...
Topic: 4076 Message: 4076

The ultimate D-STAR training class, D-STAR InfoCon, returns to Dayton Hamvention for the fifth straight year to provide an introduction to D-STAR for the many new users getting on the air and more advanced topics for more experienced D-STAR users. The three-hour class will be held on Friday, May 20th beginning at 8:00am local time at the Drury Inn Ballroom at 6616 Miller Lane in the heart of hotel row near Hamvention. This year’s topics will include getting started in D-STAR and basic operation, programming for all models of D-STAR radios, using DR Mode, downloading and updating your radio memories and using other D-STAR devices.

All registered class participants will receive a D-STAR InfoCon mouse pad and are eligible to win an ID-51A Plus dual-band D-STAR handheld to be given away during the class.

The cost of the class is $20.00 and includes all course material. Pre-registration is required and seating is limited. Registration and payment via PayPal can be found at http://www.dstarinfo.com/d-star-infocon--dayton-hamvention-2016.aspx. For more info, send an email to Info@DSTARInfo.com .

I have a 2 meter DVAP for sale, all set up with a Raspberry Pi B+, wifi dongle, power cord, USB cable, case. The Pi case isn't the greatest one, doesn't hold things all that secure, but I'll throw it in anyway. I have the original box and antenna with the DVAP. I'll even set it up with your callsign and choice of frequency before shipping. All you'll need to do is configure the Pi for your wifi, or hard wired Internet.

$250 shipped, pay with PayPal.

Pictures available if you contact me directly.

Date: 2016-05-06 17:01:02 UTC
From: rbgary45@...
Topic: 4083 Message: 4083

Is it possible to setup a DVAP for two call signs?

Xyl is licensed, would be nice for her to use the DVAP also.

A pointer or two would be appreciated

4084. Missed Keepalive from Gateway count

Yahoo group: DVAPDongle
Date: 2016-05-08 11:04:31 UTC
From: vk3pg@...
Topic: 4084 Message: 4084

I am writing this message for any body who knows why a perfectly New DVAP only 1 week old all of a sudden

first announces twice (2 times) " Reflector linked " then my dialog box announces:

"" Missed Keepalive from Gateway count from 3 to 11 ""

Then forces a disconnect leaving me have to reconnect again.

I have re-installed DV tool 3 times on my computer still no joy the DVAP still faults.

Using ID-51A Plus Windows 10 platform. RT Program to program hand held.

On first using this DVAP worked perfect for the first week, then fails after that.

Hi Phil. That is almost always an internet connectivity issue. Try going to both speedtest.net and pingtest.net to check out your internet connection. If you are using wifi, try a hardwired connection.

Note that nothing in the DVAP hardware or software can cause this issue.

No real need to do that. The call of the person using the DVAP comes from the radio and not the DVAP itself.

One this I would try as well.... Check to see the settings on what your computer does regarding sleep mode, open/close cover mode; etc.. I had to increase the settings and that seemed to have corrected almost the same issue.

Hi KB1SYX,

Just to get to a common starting point, have you gone through this process:

Using the DVAP http://www.dvapdongle.com/DV_Access_Point_Dongle/Using_the_DVAP.html

Using the DVAP http://www.dvapdongle.com/DV_Access_Point_Dongle/Using_the_DVAP.html Enter the following values in the URCALL field on your radio: "DVAP I" (request voice ID from the DVAP) "DVAP E" (key down and speak for echo test) "CQCQCQ " (transmit to a connected system)

View on www.dvapdongle.com
http://www.dvapdongle.com/DV_Access_Point_Dongle/Using_the_DVAP.html
Preview by Yahoo

This is the basic stuff to get configured. After this, please say which part is not working right for you. And report back here with your results!

AAron,

Where is the best place to buy a DVAP Dongle there?

In the past there has been. I purchased mine there several years ago.
According the their website the units are carried by HRO, R&L, DX Engineering, and others.

Will the manufacturer be there?

In the last several years he has been there are presented during the DSTAR forum.
The last several years their booth has been at the end of "Audio Alley" on the left

Who is the manufacturer?

The website for the DVAP dongle is:

http://www.dvapdongle.com

The website for the DV Dongle is:

http://www.dvdongle.com http://www.dvdongle.com

Hi Jeff.

You are correct on the dealers. For the last few years, the booth has been in Hara Arena. This year, we decided not to exhibit due to the fact that it rained in the booth last year damaging some of the contents.

I'll be at the hamfest all day Saturday, spending some time visiting the Icom d-star booth.

Hopefully, they will get the roof repaired and we can return next year with a booth.

From: landrjoh@...
Topic: 4111 Message: 4111

Hi gang,

I'm trying to help out a friend get his new DVAP Dongle setup. I'm doing this over the telephone because he lives almost 2 hours away from me. He'll be using his DVAP with a new, top brand laptop runing Windows 10.

He's installed the FTDI USB driver, Apple Bonjour, and the DVAPTools app, but when he launches the DVAPTools app it shows up in a VERY tiny window, so small in fact, he can barely read the contents! He's tried using the Windows 10 screen magnifier to deal with it, but he said this just revealed the elements in the window are a mess. Apparently the text elements are much larger than the input boxes for the station callsign, frequency, etc. Besides being shrunken, it sounds like the DVAPTools window elements are terribly out of proportion to each other.

He says all his other apps and icons look fine on this laptop.

He's right-clicked on the DVAPTools icon, clicked properties, and tried changing the window size settings, but he says the "Apply" button isn't active so he can't save the changes.

He's tried uninstalling and reinstalling the DVAPTools app, but that didn't cure the problem.

Any suggestions? I'm not a Windows 10 user so I'm at a loss to help him.

Thanks!

I'm running a DVAP on a new Lenovo YOGA with a relatively small display. There are three screens which pop-up when you initialize the DVAP; you are running the latest version, DVAP tool 1.04 and the DVAP tool window. For me, the DVAP 1.04 screen is pretty small and some of the number are really not legible but in my opinion, you really only need to ensure your call sign is correct, your frequency is correct and your DVAP com port is correct. From there as long as you can hit the 'open button' you don't need to make any other adjustments. To me, the screen I would be more concerned with is the DVAP tool screen. This is where all relevant information gets listed. I was able to right click and change the text size even with the applied button greyed out. Not sue this helps, but this has been my experience.

I am not trying to be funny here, but the reason you might not hear anything is because no one is around. This is one of the many things I have learned along the way.. I would suggest going to either reflector REF0030C or REF001C and ask for a radio check. Again, depending upon the reflector and the time of day, it may be very quiet. The two reflectors I noted are usually busy or someone is around.

Good luck,

Gene Moore

4122. HELP NEEDED....RECEIVE ONLY WHEN CONNECTED TO SOME REFLECTORS

Yahoo group: DVAPDongle
Date: 2016-05-29 17:59:24 UTC
From: radiodog1234@...
Topic: 4122 Message: 4122

When I connect to many, but not all of the reflectors, I get a "connected" message saying that I have "RECEIVE ONLY" access?
Anyone have a fix?

Help is appreciated.

Hello. You may link your DVAP to Module E(ie REF030E) and check your audio via echo, you will hear yourself. No need to call for a radio check that way.

The program you are using does not require any port forwarding. After you press the OPEN button you select on your radio's "Call Sign" menu option to link up to REF012E (Reflector 12 Module E) (page 2/4 of the radio's menu) and it should read:

```
UR:REF012EL
R1:--------------
R2:--------------
MY:>>Your Callsign should be here<<<
```

You key up once for 2 seconds, the DVAP should come back saying "REMOTE SYSTEM LINKED", after which you go back to the Radio's Callsign Menu and change the UR: to:

```
UR:CQCQCQ
R1:--------------
R2:--------------
My:>>Your Callsign should be here<<<
```

Then you may proceed to key up and talk and after you release the PTT you will hear your transmission, along with your callsign and slow text displayed on your screen.

I do this to test my internet connection whenever I move somewhere unfamiliar, before I go about reflectors or nets.

4129. Unable to get 70cm DVAP connnected

Yahoo group: DVAPDongle
Date: 2016-06-05 18:54:18 UTC
From: periopnurse@...
Topic: 4129 Message: 4129

Hello everyone,

Finally getting around to install my 70cm dvap and not able to get connected. I checked my call sign and am registered with WC7SO in Bellingham, WA and have both my call sign and the call sign space A listed as registered. I tried connecting on both my mac and MS Surface Pro 3 tablet using DV tool software but never get connected to D-Star repeater. The repeater that I'm registered with is currently down, so not sure if that is what's keeping me from connecting. Tried looking via google search but haven't had any luck. Drivers installed and get the flashing blue light as well as the slow/steady green light. Any ideas in getting this going?

Thanks,

Leon

Hi Gary!

Did you program the radio with a "Link" command for the reflector that you want to connect to? Before you can access any reflector (a good place to start is REF001C or REF030C -- LOTS of traffic) or repeater (NOT a good place to start -- not every repeater can be connected to via a DVAP) you need to link to that reflector/repeater …. SO … in your UR field you should have, say, REF001CL. Kerchunk the HT, you should get a message back from the DVAP … Once you are connected then set UR to CQCQCQ … Any traffic on the reflector will now be heard and you can join in the fun!

Try that and let us know …

Best Regards,

Steve/SM

Hi,

I'm using the DVAP with my Rasp without any problem at my home network. Problen when traveeling I have to chance the WIFI setup for each new hotel/location. Now I changed an older notebook from Win XP to Ubuntu 16.04 so that I could use this notebook instead off the rasp. Unfortunately I'm not a Linux pro so I'm looking now for the part of the respectiive D-star software which is on a Rasp D-Star image. I read that I have to compile this software with different libs etc. Before I will try this here my question.

Hi Leon,

The repeater system which you're callsign is registered through should have no effect on the operation of your DVAP. Your D-Star registration looks good.

You said: "...never get connected to D-Star repeater."

Are you able to connect to a D-Plus reflector like REF001C?

Hi Leon,

Just lurking when I noticed the “simplex” comment in your email. Dstar radios have a quirk/feature that causes endless confusion and may be at the core of your problems.

When in simplex mode the radios do not transmit all the data, in particular they do not send RPT1 or RPT2 values out in the data stream. The solution is to program the radio in duplex mode with zero offset. Same frequency result, but now the complete data content is included.

FWIW – sorry for butting in if not helpful.

Ted

The DVAP does not use RPT1/RPT2 for routing so that is not an issue.

I have a previously working DVAP Dongle, and it does the exact same thing - green flashing light until I connect, then pulsing blue light. The DVAPTool window shows a signal being received, but no change on the DOS screen. I used to see it telling me there was a carrier, but nothing now after "ASCP device started". The DVAP Util shows the signal, so the RF portion is working. I've tried on two different PCs with exactly the same result.

Any ideas???

Thanks,

Eric NC6K

Hi Gary,

Essentially you edit the "UR" field to connect or disconnect from the reflectors. For instance, to connect to Reflector 30C, you'd enter "REF030CL". To unlink, you'd enter "-------U". Where "-" is a space so that the "U" is in the 8th position.

Hope that helps

SINGH, AJ4VS.

Also remember to change the UR field to CQCQCQ after you have established your link to a reflector.

From: photo2000a@...
Topic: 4143 Message: 4143

hi

I have been using a dvap at 2 location in NY both on cablevision, and my Imac w/o any problems, works great.

Traveled to FL which is comcast all three locations are using linksys routers and I've programmed them the same. but using my macbook computer and have set sleep to off. Using a ID51+

When I connect all seems great while i am watching the screen (and dongle lights) all is good for what seems to be 2-3min then suddenly w/o any indications or error messages it just seems to not work, presume to disconnect leaving me w/the green only light if I key up ....nothing

if I manually disconnect (open/close on dvaptool) and reconnect works again for a few moments using dvap tool

any ideas what I can try to get it going ?

Thanks

Greetings,

Presumably you're using WiFi for internet connectivity at both locations?

If yes, then something you might want to look at is a WiFi packet collision problem between your laptop and wireless router. This can occur in crowded WiFi environments where many signals are trying to use the same RF spectrum... unfortunately an all too common problem with all the WiFi connected gadgets we have around us. One way to eliminate this as the potential cause is to temporarily connect your computer directly to the router via an Ethernet cable and see if the problem disappears.

hi

I have been using a dvap at 2 location in NY both on cablevision, and my Imac w/o any problems, works great.

Traveled to FL which is comcast all three locations are using linksys routers and I've programmed them the same. but using my macbook computer and have set sleep to off. Using a ID51+

When I connect all seems great while i am watching the screen (and dongle lights) all is good for what seems to be 2-3min then suddenly w/o any indications or error messages it just seems to not work, presume to disconnect leaving me w/the green only light if I key up ....nothing

if I manually disconnect (open/close on dvaptool) and reconnect works again for a few moments using dvap tool

any ideas what I can try to get it going ?

Thanks

Send the hostupdate command from the radio to update the host file of your DSTAR Commander software on the Pi. Once it is updated you should be able to link. When you hear the not linked announcement after sending a link command it usually means that it cannot find the reflector you are trying to link to. The host file handles telling the Pi how to find the reflector to link to, so if the host file is outdated or wrong you will get the message. Updating the host file usually solves this issue.

Or, you don't have the radio programmed correctly so the software is not receiving the command to link.

Can you send a screen capture of your programming?

No, Duffy, never got a response to this issue. I am "glad" to see that it is not just me!

Just to put this out on the forum again …

The issue is that when running any of the Raspberry Pi G4KLX-based DSTAR software images that after some period of time … minutes, hours, sometimes days … that the DVAP will get locked in transmit mode … with the RED LED on and the DVAP transmitting continuously … Sometimes the Yellow LED is on as well … Because it is continuously transmitting there is no way to remotely restart the Raspberry Pi. You have to cycle the power to restart it.

The strange thing here is that this never happens (to me) when running DVAPTool on the Raspberry Pi.

So, if there are any thoughts on this, please let us know …

Best Regards,

Steve/W3SMK

hi

Thanks very much unf that wasn't the problem i can run other programs to test general net connectivity and it works great unless comcast is just blocking those particular bits, presume not.

if i am unkeyed and no traffic on rx does the dvap or it's software communicate to the far end? if not then the problem is def on my end i would guess

Thanks again John, was hoping for a few more responces/tips

We have seen a handful of routers that would not pass traffic on the ports used by DVAPTool. Some were helped with a reboot, a couple had to be replaced by the ISP.

If you'd like to provide your callsign, I can take a look in the logs for any issues.

Topic: 4159 Message: 4159

Hello all,
Ordered a 440 DVAP today, along with an ID-51A+ and can't wait for the UPS man to drop them off.... anyway, any pointers on getting everything running smoothly on a Win10 machine? I've enjoyed the time I've spent on D-Star with the ID-5100 I got at the Centenial Convention, and I'm looking forward to using the DVAP with both radios to fill the gap in coverage of the semi-local repeaters here at home. I'm thinking that the HT will work fine with the dongle around the house, but I may need to add an external, hi-gain antenna to gain any usefullness from the mobile. Any thoughts or advice on that front?

Thanks in advance for any pointers, advice etc. you all may have..

73, for now,
Greg

Hi Greg,

Ya know, for portable/mobile D-Star operations, you might want to consider going the Raspberry Pi route with your DVAP... that's what I did. All you need is your DVAP, an inexpensive Raspberry Pi 3B motherboard, a portable USB battery pack (or a 12v power cord for your vehicle's cigar lighter), your cell phone as a Internet hotspot, and easy-to-use free D-Star Commander software to run everything. All the parts needed can be purchased from a place like Amazon.

A how-to guide can be found HERE https://storage.googleapis.com/dstar/How%20to%20Build%20a%20Raspberry%20Pi%20Hotspot%20(illustrated)%20V1.0.pdf on the D-Star Commander website.

It works GREAT!

Thanks, John, That does look interesting, although I think the ID-5100 does a good job from the car, this could be the perfect solution to tuck into a saddlebag on the motorcycle for the summer commute. I'm also thinking about resurrecting an older XP laptop that is sitting on a shelf collecting dust to dedicate to running the DVAP station. Lots of ideas bouncing around in my head, just waiting for it to come in the mail... The HT should be here tomorrow, DVAP shipped Priority Mail CA to CT delay, but all should be up and running by the weekend, hopefully.
Its going to be interesting to be able to do a bit of Reflector hopping around the world rather than sitting on the same reflector the local repeater is connected to and I'm sure I'll be perusing older posts here as time goes by for some tips and tricks.

Thanks again for the input, hope to catch you on the air,

Hello Greg,
I have the 440 DV dongle and the Icom ID-51A also. I don't have access to a local dstar machine and I love my dongle and 51A. It is a great little combo for DStar. You can take the dongle on vacation with your 51A and get on the network. In the mobile, I would go the raspberry pi route instead of trying to put a high gain antenna on the dongle. It doesn't have a lot output and you would lose a lot in the cable unless it is a very short run. Have fun and enjoy DStar. It is great.

DVAP came in today's mail (a day earlier than predicted, YAY!) working on getting it up and running with the ID51. Not exactly a smooth process but I think i'm getting there...finally got it connected to Reflector 69c, and monitoring now, took a little bit to recognize the fact that its just a connection device and the 'hard work' is all done from the radio side. Seems to be working OK at this point, on the 'main' desktop comp. Figure I'll keep it there to play around with for now, and then change over to one of the laptops for a dedicated set up. So far, so good.... reflector status page shows connection, DStarUsers 'last heard' shows call logged, this is going to be fun.... lol

Hi Dave; Using DVAPTool on a Pi can be a challenge, if I remember correctly, you need a distribution of Linux already built, then (google for) the DVAPTool installation, which includes the executable and some libraries... which you need to know where to put the libraries. This was released several years ago and (IIRC) was limited in what it could do... it supports the DVAP, of course, but I don't think it'll do the DVmega.

There are several distributions based on ircDDBGateway which are SD card images, each has its own method of configuring the software, but are generally easy to set up, and support a variety of radio hardware.

- Maryland Dstar Image (google it)
- Dstar Commander (google it)
- my own YOZ-Lite kdj.metro-uhf.org/dvap
- the original westerndstar.co.uk

Have fun.

Bill,
I recently took a trip to Myrtle Beach and successfully used my DVAP on the motel's public WIFI, with no problem. Do you have internet at your home QTH? Do you have a cell phone that has 3G/4G data access. Is your DVAP set to automatically get a IP address? I suggest you go to a friend house that has WIFI, and give it a try or if you have a cell phone that can be used as a hot spot you can try to connect thru it. Also try the DVAP, calibration utility to see that your DVAP is on frequency. Hope this help.
Good Luck, Also check out the DStar users group on Yahoo, there is a lot of folks that know this stuff inside and out. If all else fails go to the DVAP web site and check for technical support. You could have a bad dongle. It is not unheard of.

Bill,I recently took a trip to Myrtle Beach and successfully used my DVAP on the motel's public WIFI, with no problem. Do you have internet at your home QTH? Do you have a cell phone that has 3G/4G data access. Is your DVAP set to automatically get a IP address? I suggest you go to a friend house that has WIFI, and give it a try or if you have a cell phone that can be used as a hot spot you can try to connect thru it. Also try the DVAP, calibration utility to see that your DVAP is on frequency. Hope this help. Good Luck, Also check out the DStar users group on Yahoo, there is a lot of folks that know this stuff inside and out. If all else fails go to the DVAP web site and check for technical support. You could have a bad dongle. It is not unheard of.

4183. linking to busy reflectors

Yahoo group: DVAPDongle
Date: 2016-08-20 20:25:05 UTC
From: doncollins@...
Topic: 4183 Message: 4183

Some time when I link my RBPi/DVAP access point to a reflector, particularly a busy one, like REF030 C, a conversation will already be in progress. Although I am only listening, sometimes one of the folks engaged will politely invite me to join the QSO. Having heard only a few seconds of the QSO, I have little to add, other than a self-introduction and general pleasantries. (I've even popped into a net I didn't previously know existed!)

My question is, can I link to a reflector without triggering ID text across everyones' screens? Sometimes you want to join the conversation, but sometimes you just want to anonymously monitor what is going on.

Should I announce myself as "monitoring" or just bide my time and decide if I want to jump in after listening a bit?

How do you guys handle this awkward situation?

73,

Don

Date: 2016-08-22 13:15:22 UTC
From: aa4rc@...
Topic: 4183 Message: 4184

The DVAPTool software does not automatically key up. It only transmits to the reflector when you do. If you are using other software, you will need to ask for support from the author.

From: Tony Swainsbury
Topic: 4185 Message: 4185

I can access the DVAP and get the blue flashing LED. Tried various settings on IC 1700 but non make the DVAP work. PC says radio signal sent but DVAP just flashes blue LED.

I can only use a reflector as I am miles away from any DSTAR point.

What are the recommended settings on the IC 7100 please?

Tony

From: doncollins@...
Topic: 4183 Message: 4186

Robin,

I guess my question really is, when I select "link to ref ####" and momentarily key the PTT, does it go through the gateway and create the text message on everyone's screen?

I thought I had to select "USE Repeater" before I actually transmitted anything except the connect command over the gateway. Maybe I'm wrong but I thought someone once spoke to me by call sign, as soon as I linked to a repeater with my id-51 and my RBPi/DVAP.

Thanks for your patience with us dumb users who don't understand the program logic like the programmer would. These are amazing programs, and we really appreciate the use of em!

4189. DVAPTool on Ubuntu

Yahoo group: DVAPDongle
Date: 2016-08-24 23:41:41 UTC
From: Jeff Bishop
Topic: 4189 Message: 4189

I am currently running DVAPTool on a dedicated netbook running 32 bit Ubuntu 14.04 LTS.
I have been putting off updating the computer to the newest version of Ubuntu as I had to jump through hoops in order to get this running. I am concerned that once I update it might break DVAPTool and I will have to start at ground zero once again.
For those running DVAPTool on Ubuntu did you have to set things up again after updating the OS or did things continue to work without an issue?
Thanks in advance

If you are connecting to ref 001c, I have heard a number of people raising this concern where you drop out of the reflector. One of the comments and I'm not sure if it was tongue-and-cheek was to engage in a conversation. If you are just listening, you may timeout. Again, not sure if that is the case, but that is what I have heard.

4196. DVAP Raspberry Pi 3 & Maryland Image

Yahoo group: DVAPDongle
Date: 2016-09-05 09:30:20 UTC
From: speedy-diesel@...
Topic: 4196 Message: 4196

Hi

A big ask but I have reached my depth in the pool and taking on water !!

Have the DVAP running on laptop with no issues for the last few weeks since purchase. Trouble is laptop is shared around the family.

Fellow Ham suggested the Pi with Maryland image - researched it and it was as plug and play as you could get, for me that is - don't mind configuring drop down boxes type software but well out of comfort zone messing with code and OS. So Pi3 starter kit purchased and image downloaded.

Long story short image won't work with Pi 3 - you need to have a Pi 2 to upgrade the image, which don't have or a Pi2 to run. The guys at Maryland did release a Pi3 image late March 2016 but I understand that $$ prevented it from being on the web to share.

Does anybody know where I can find the image or point me in a direction to get up and running coz the Chief financial officer (YL) is looking at the pile of unused boxes with the 'more junk for the shelf' eye.

As I say drop down boxes and similar I can work with but messing with code and OS is a little beyond me at this early stage.

Thanks for your help and time

You might have some problems running DVAPTool after the update. It's possible that some of the 32bit libraries that are required for DVAPTool to run, may have been uninstalled. The good news is that just by running DVAPTool, it will let you know what's missing.

Hi Bob. From the official instructions at www.dvapdongle.com: http://www.dvapdongle.com:

Enter a simplex frequency for operation in the Frequency box. Consult the frequency bandplan for your country/area for appropriate frequencies. Enter the entire frequency in Hz (e.g. 146550000 for 146.550 MHz).

Hi Thomas. Some 3rd party software has a problem where it resets your calibration data on the DVAP. This will put it off frequency. You might try to move the frequency of your radio up/down by 5/10 kHz (while not changing the frequency in DVAPTool). If that works, we can recalibrate your DVAP. You will see the MY/UR/RPT1/RPT2 fields in DVAPTool show data if you are on frequency.

4205. DVAP and ID51A+

Yahoo group: DVAPDongle
Date: 2016-09-11 12:36:40 UTC
From: larry@...
Topic: 4205 Message: 4205

My DVAP and ID 51A+ yesterday.

The Dongle is registered as HK2LS with a space in the first field and the DVAP Tool 1.04 matches with just HK2LS. When I transmit on the ID-51 I see red bars on the tool go to the right so the radio link is working. I am not sure the DVAP Tool is registered on the DStar Network. I don't see the "Listening too HK2LS"" nor anything for MY/UR/R1 or R2.

I do see “Finished reading from name server” and Dstar name server text message received ->You are running the latest version of DVAPTool.

I am not sure how to do this part – I don’t see a URCALL to enter all this into the radio? Where exactly in the ID 51 do I input this information?

Enter the following values in the URCALL field on your radio:

"DVAP I" (request voice ID from the DVAP)

"DVAP E" (key down and speak for echo test)

"CQCQCQ " (transmit to a connected system)

"xxxxxxmL" (to link, replace XXXXXX with the gateway or

reflector callsign making sure to use 6

characters filling the end with spaces as needed.

Replace the "m" in the 7th character with the module

to which you wish to link. Use "L" in the 8th

character to indicate the Link command. For

example, to link to Reflector 001 module C, use

"REF001CL" in URCALL. To link to gateway W4DOC

module A, use "W4DOC AL" in URCALL)

" U" (unlink from a linked gateway/reflector. Make sure the “U”

is in the eighth position of URCALL)

4206. Re: DVAP and ID51A+

Yahoo group: DVAPDongle
Date: 2016-09-11 17:07:00 UTC
From: aa4rc@...
Topic: 4205 Message: 4206

Your DVAP may need some calibration. When you key up your radio, you don't see any data in MY/UR/RPT1/RPT1 ? If not, try changing the frequency of your radio up/down 5/10 kHz and key up to see if you see the data. If so, it is a simple process to recalibrate.

Send an email direct and I can walk you through it.

73,
Robin

Your DVAP may need some calibration. When you key up your radio, you don't see any data in MY/UR/RPT1/RPT1 ? If not, try changing the frequency of your radio up/down 5/10 kHz and key up to see if you see the data. If so, it is a simple process to recalibrate.

Send an email direct and I can walk you through it.

Hello I am Chuck N4UED . A friend of mine KG4NVB Charles sent me his DVAP to test . I used the dvap utility tool and it appears to be on frequency . I linked it using dv tools to reflector 1 c . I could see when someone was transmitting , however no audio came through . The call signs appeared and everything seemed normal except what I stated above . I connected my dvap and it worked correctly . He said that using his 31 he had to push the monitor button on the side for audio to come through . This did not work for me . I only saw call signs of people talking . Is your address correct on QRZ so I can send this to you ?

I sent this to your amsat email Robin . My email is n4ued@arrl.net , Chuck N4UED

Yes, setting the DVAPTool frequency 5000 Hertz higher than the radio solved the issue.

When I go to To Select I see Reflectors but not Repeaters?? Is there a way to load the ID-51+ with all the Reflectors (so I don't need to enter them) along with their locations and the repeaters on the TO SELECT screen??

Yes my address is correct on QRZ.

Yesterday I was able to connect to reflectors - it showed me as a remote user and listening.

A friend called me - her call appeared under last heard and her call to me came though my HT connected via the DVAP.

I attempted to call her back and nothing. She didn’t hear me and I never appeared under last heard. I could see myself though as being received on the DVAP when I hit the PTT on the radio.

As a side note at first the DVAP would not work - I needed to change the frequency between the DVAP and radio by 5000 hertz and it appeared to work then (with the exception of the above issue).

With my DVAP dongle connected to my MacBook Retina Pro under Sierra OSX 10.12 the dongle works for maybe 12 minutes then the dongle quits working and DVAP Tools can’t find the device thus the LED on the dongle is no longer flashing blue. The MacBook Pro is not going to sleep.

If I unplug the USB cable then plug it back in things for another random amount of time.

Larry

Try naming your iPhone with two or three letters/numbers, such as "MYI" or your initials or something short.
Had the same issue with my iPhone 6plus. After name change it seems to work fine now will connect without issues.

This from previous posts is not a Rasberry Pie issue it is Iphone this is what I found to fix this problem,1. Before using Hotspot and Rasberry Pie turn it on only 1 or 2 minutes before powering up.2. If possible only use Hotspot on Iphone dedicated to Rasberry Pie if you cant then switch off 10 minutes before using Rasberry Pie.It appears not always but most of the time the Iphone is listening to other things Bluetooth can be a huge factor here.All so the most power fullest WIFI can out weigh a less signal from your Iphone in other words it best to set the hotspot where there is no other more powerful WIFI signals in today worldthats very hard you may not notice the WIFI of neighbours or even a car parked to you may have stronger signal than your hot spot.This is what I found and if steps taken you shouldnt have any trouble with Iphone 6 also it can be slow getting the lady to say connected that may be because of ircddb.net is harder for mobile network to get to so time may be needed.
I be pleased to hear other comments on this.
Best regards

Phil VK3PG

Yeah, cuz if you put a special character somewhere that the software doesn’t like, then that will make your iPhone complete garbage & you may as well throw it in the trash, which of course would make a dumpster diver exceedingly happy.

Does this connectivity issue come up on any/every gateway you attempt to connect to?

If you are using DSTAR commander, have you tried updating your hosts file?

And I am assuming that if you connect the Rpi to another internet source everything works ok?

Not sure if feasible, but I have also been able to use my iphone via USB connection to the pi for dstar gateway activity.

Keep us posted.

From: rayden@...
Topic: 4235 Message: 4235

After a few hours of pulling out my hair to get my DVAP Dongle to work, I finally tried on my iMac. I could not get to work with windows 10 or windows 7 on an Acer so I said what the heck. Dongle works on iMac. My other problem was connecting to repeaters. Reflectors were easy. When I figured it out it was pretty simple. To everybody, just have a little (LOT) of patience you will get it. After about 3 minutes unconnected the Dongle seems to go to sleep, but if connected it does not. Also do not let computer go to sleep mode or screen saver mode to it will also go to sleep. I just move the mouse every little bit it will stay connected.

Just my observations,

"Before using Hotspot and Rasberry Pie turn it on only 1 or 2 minutes before powering up."

Turn on the Hotspot for 1-2 minutes before powering up the RPi?

Well I got it to work tonight but damned if I know how. I wiped the micro SD card clean, re flashed Commander then configured it JUST to use the hotspot, unlike before when the Hotspot had priority followed by WIFI. Turned it off then on then off and FINALLY I'm connected. But I don't feel its all that reliable. Who knows???

That's a good idea. I haven't programmed any DVAP commands into the radio yet. How did you do it? Did you use the programming software? Could I see an example or could you refer me to a webspot wth an example? Thanks

Latch on to Iphone wifi hot spot

For those who have Iphone and want to latch on to Iphone hotspot through using Commander image and raspberry pie may find this helpful.

If you find the Iphone wifi hot spot is not connecting to raspberry pie on boot up through WIFI here are few solutions.

1. I have found here RJ45 land line to the rasberry pie works first time every time on boot up ircddbgateay is near instant use.

2. House WIFI being so strong or most are the same result as above.

3. With Commander image and raspberry pie wanting to latch on to your Iphone may appear to some times work sometimes don't.

The best way for first time latch with iphone in portable situation is to only switch on Iphone hot spot 2 minutes before booting up commander image and raspberry pie

failing to do so will and can cause failure to latch to hot spot on Iphone.

It appears you can leave a Iphone hotspot on all the time but I am sure either:

The Rasberry pie can't Ack to the Iphone hot spot or reading from previous article in an other forum the Iphone on long durations of in activity may go in some hidden

power save mode all though the beacon of Iphone shows different blue tooth seems to make it worse.

You can if you wish use the USB cable from Iphone to the normal USB ports to the rasberry Pie it does work well and appears stable.

It maybe to the Rasberry pie has poor selectivity in WIFI if stronger hot spots are near but a perfect first-time latch with hot spot on a iphone
2 minutes before booting up the commander image and raspberry pie.

A lot are saying if you reboot second time around a perfect latch takes place I found this to every time with my Iphone.

I can only speak from my experience that when using a mobile device it takes a while for it to complete to the IRcddbgateway with RJ45 and reliable home internet it always faster.

If you havent got these commands you should have them to control the Commander image and raspberry pie by

Talk

Reboot

Shutdown

Echo

Hostupdt

Cleanup

These are the commands to Commander image and raspberry pie in your call sign area only.

Special note: Shutdown is preferred method always of shutting down Commander image and raspberry pie it only takes 30 seconds to shutdown before

turning off power and keep your image clean on SD card.

Best regards

Phil VK3PG

Thanks for that informative treatise. I wasn't aware I could hook up the iPhone to the RPi directly. I have noticed using the Commander commands helps as does turning the iPhone on AFTER letting the RPi "warm-up" first. Thanks!

DVAP'ers

I am a newbie to amateur radio and D-Star. Recently, I purchased a 2m DVAP Dongle. I think that the installation of the drivers and DVAP tool went well, as indicated by the screen shot below:

However, I am not certain if the frequency is correct. Additionally, I am having difficulty pairing the DVAP Dongle with my ID-51A. Any and all help is greatly appreciated.

Of note, I am using OS X Sierra, and have disabled the app nap function for the DVAP tool.

Thank you!

Respectfully;

4246. DVAP does not seem to key radio on receive

Yahoo group: DVAPDongle
Date: 2016-10-07 03:08:45 UTC
From: tech.warrior@...
Topic: 4246 Message: 4246

I have purchased a 70cm DVAP dongle and configured it with ICOM ID-51. I can link to a receiver via B and
I have checked dstarinfo website and I am shown connected to the reflector. The DVAPTool shows Connected to: REF037B.

I have noticed that following messages roll by on the "dos" window screen of the DVAPTool:

Remote system reported 2893 packets transmitted on stream 3a31.

I am under the impression that the reflector is receiving DSTAR voice packets so I should be able to hear
these on my connected radio.

Yet I hear no voice.

Any ideas ?

If you change the module in DVAPTool to "*", do you hear the conversations? Also, if a conversation is happening on "C", you won't hear it while listening to "B".

Do you have digital squelch turned on?

4251. DVAP to Link to a D-STAR Repeater? (Not Reflector)

Yahoo group: DVAPDongle
Date: 2016-10-18 13:54:38 UTC
From: nm6e_dx@...
Topic: 4251 Message: 4251

Good Morning,

I've been playing with the DVAP (440Mh version) connected to my MacBook and have been successful in connecting to various reflectors with my TH-D74. Also, having read the past threads on the APP NAP was very helpful in solving that issue. I've browsed around and looked at many YouTub videos to no avail with the following question.

My question is, can I connect to DSTAR repeaters using the DVAP?

If yes, what are some sample configs folks use on their radios that I should be transmitting to connect as I have no clue what to enter in the RPT1/RPT2 fields and how to force a "L" link if I am not sending a Link ? (due to bad configs!?)

Thanks,

Javier NM6E/5

What did you do to make it work using the DVAP to connect to actual repeaters? I am 3 days into "starting" my DVAP & MAC boondoggle and got the reflectors to work but no clue on what the settings on my radio should be to try (does it?) and connect to repeaters using the DVAP dongle and my TH-D74A from the simplex frequency of the DVAP.

Thanks from a newbie...

I use the RT systems software for my ID-51A. In the column that says your call sign put the repeater call sign with node then a L, XX0XXXCL or with 5 or 4 letter call sign X0XXX CL & X0XX CL. This will link you to the repeater. I hope this helps.

Not sure for your particular radio, but in the "to" box dial in, type in
or whatever you do to select a dstar repeater. Following the repeater
call sign use a "C" for connect, the "U" for use. When done repete the
same process with "D" for disconect. When you use a repeater frequently,
store the call sign with the commands attached.

I key up upon the repeater or reflector stored in my radio then go to the KC0NDR T to transmit on that repeater or reflector then if nobody answers I go to KC0NDR to unlink through my DVAP.

Most repeater owners would prefer that you don't connect to the repeater but to the reflector the repeater is connected to. I would check with the repeater owner before connecting to it.

FWIW - I was unable to get the Maryland image to load or work with the Pi 3 and after some research selected the W6KD Commander image. Make sure to select the DVAP image and not the DVMEGA image.

For me it has been rock solid and connected 24/7

Here is the link. 73, Gary W8VI

Thanks for the link Gary!

Is the Commander Image, just the "DVAP controller" software or does it contain the Raspbian Jessie "flavor" of Linux as well. Or restated differently, do I need to have Linux up and running on my Pi3 before I install Commander. I see it says that Commander was "rebuilt on the Raspbian Jessie OS" so I'm not sure if that means it includes the OS or not.

Thanks again for the great coaching!
Jon

From: photojon@...
Topic: 4196 Message: 4262

Gary,

I had replied earlier but not sure why that post isn't showing up on the yahoo group.

I wanted to pass along a huge thank you. Previously I had never even applied power to a Raspberry Pi before, and simply followed the instructions at the DStar Commander website you pointed me to above and then the readme files from the downloads. Net-Net, I was able to boot and run Dstar repeater in under 30 minutes from the time I started.

For other ls
newbies following this thread, the Commander image in the link above contains EVERYTHING you need to get up and running. It wasn't clear to me that it also included the Raspberian OS/Kernal but it indeed does.

While I am able to send commands via my radio to the DVAP, for some reason, I'm not able to Link to a repeater or reflector using the same "radio memories" that worked when my DVAP was connected to my macbook.

I'll start reading other threads but appreciate if there might be something obvious in moving from a MAC to RPi with a DVAP.

Thanks and 73
Jon

Jon,

I think Yahoo or approvals are running a little slow today and am having the same issue.

Just curious, in your radio’s memory are the reflectors set up as Simplex or Duplex? I’m using W4RT software and have reflector memories set to Simplex.

On your Gateway config screen does it show that you are connected? Might want to check again the Gateway config settings.

Also, check the D-Star Repeater config file / Call sign – is it showing Simplex?

Another way to quickly connect to various reflectors without transmitting is by using the ircDDB Remote app on your phone or tablet. It can be downloaded for free at the Apple or Android app stores. Then all you need to do is Enable remote at ircDDB Gateway config file / Remote and chose a port number and password. The app also needs your LAN address for the RPi.

73, Gary

4264. DVAP Dongle "goes to sleep" on Mac

Yahoo group: DVAPDongle
Date: 2016-10-29 22:26:07 UTC
From: morganpalmer1@...
Topic: 4264 Message: 4264

I am using DVAP Dongle with a Macbook Pro. Back when I first started using the dongle last year, I remember having an issue with the dongle going back to sleep mode (green pulsating light) despite being connected using DVAP Tool and even when listening to a QSO.

I recall there being a setting in my Mac that keeps the dongle "awake" or "alive", so to speak, so it does not go into sleep mode. I can't find where it is!

Exasperated, I'm asking for help! I've used both of my DVAP Dongles and they both disconnect and go back to sleep mode after a minute or three so I know it's not the dongle. Thanks very much.

I'm just getting into D-Star and I registerd a week ago on D-StarUsers.org at a local repeater that was listed there. The owner never processed my request and has not responded to emails. It there another way that I should try registering? Can you recommend an active repeater where I can be registered more quickly?
Thanks!

4270. Raspberry Pi 3 with DVAP repeater module not starting up

Yahoo group: DVAPDongle
Date: 2016-11-11 03:50:04 UTC
From: <orion_519@...>
Topic: 4270 Message: 4270

I have 2 identical units

Raspberry Pi 3 with DVAP using the Western D-Star Software
But have different Callsigh and frequencies on each

On one of them, it all works fine

But on the other, the repeater module of the software does not wan to startup when the DVAP is connected, and when it is connected, the flashing green light on the DVAP

I tried swapping DVAP’s with one another and it is still not starting up on the same Raspberry Pi 3

I’ve tried different USB ports, different USB cables.

Tried reimaging the MicroSD card 3 times to start over from scratch.

Topic: 4271 Message: 4271

So I can't get the red Dongle to work on my machine here running windows 10.

I downloaded bonjour

I installed the executable drivers for Windows 10.

I look at Devices and plug n the Dongle and I see it as USB Serial Port (COM2)

Under Universal Serial Bus controllers I see the device at USB Serial Converter.

I tried updating the drivers for USB Serial Converter and USB Serial Port and am told I have the latest driver.

I see no Yellow marks under devices

Yet DTools doesn't find the device (which is flashing a green LED).

Ideas?

4273. DVAP in my Car

Yahoo group: DVAPDongle
Date: 2016-12-01 11:32:07 UTC
From: Wolfgang Haugk
Topic: 4273 Message: 4273

Greetings,

I have setup a DVAP in my car with all the necessary attachments to make it work. I will be running an ICOM ID-880H mobile, at the factory min. 5 watts to power through a dual band high gain 2m / 70cm mag mount antenna centrally located on the roof of my Honda CRV.

Question: I am told by many of my electronic techs friends and HAMS that my 5 watt tx output from the ID-880H will burnout the front end of the DVAP. If this true and if so, are there any solutions other than a dummy load in replacement of the mag mount antenna?

Your thoughts, guidance and assistance will be very appreciated given that many internet searches do not address this issue.

Don't believe that is true. I run a dv dongle for dstar in mobile and I use

a ID5100 dual band radio on 5 watts lowest power for dstar. I also run a Larsen mag mount on a 2016 kia Sorento, though mine is located toward the rear of the car. Being doing it for two years now no problem with the dongle.

4275. DVAP is DR mode for Kenwood

Yahoo group: DVAPDongle
Date: 2016-12-04 01:45:22 UTC
From: w6gps@...
Topic: 4275 Message: 4275

I was using the RB Pie with DHAP and I was able to get the Kenwood to talk to the Pie and DVAP no problem. During the programming using DStar commander it told me to enter my call then add a B an the end of the call sign
When I added the DVAP freq / my call W6GPS B then my call in the gateway I was able to use the DR mode. I had used the Memory method to use the DVAP ....so I guess what I am asking is how do I make a entry in the edit Repeater list (DR repeaters) the format offsets ect....thanks Don W6gps

PS what I want to do is use the computer /DVAp and not use DHAP

It's a function of the software that you run. On the Pi I run G4KLX ircDDBGateway/dstarrepeater. If you are running the software from the DVAP website then you just code the repeater as a simplex frequency with no DUP.

Callsign AF9W C

Gateway AF9W G

Frequency 147.44

Shift None

Offset 0.000

Bob

hi

I've read the posts here about the dvap seemingly going to sleep but didn't fix it on mine, perhaps someone might suggest something obvious i overlooked?

I have the dvap and a MacBook and an iMac both running el capitan . when i run dvap on the iMac works great which btw is in my other place and using cablevision and a linksys router.

Down here at another location where I am using my MacBook and is a comcast area using same model linksys same dvap after about 10min the dvap blue blinking light goes off just the green is lit.

i did check screen saver to never , power nap leave hd on, prevent computer from sleeping in Energy saver.

anyone have any thoughts as to what I might check? or missed??

thanks

This works great on the DVAPTool 1.04. This version has been working great for me for years. Recently DVAPTool 1.05 was released. I am having the "going to sleep" problem with this new version. When you right click and elect "Get Info" the option to prevent app nap is not available. So far, I have not figured out how to change the app nap parameter on the new version. Anyone else having the problem with the app going to sleep with version 1.05?

For now, I have uninstalled 1.05 and re-installed 1.04 and confirmed the app nap setting was correct. 1.04 works great. I don't know what the differences are between 1.04 and 1.05 but my experience is that 1.04 works and 1.05 may have the issue with it going to sleep or some other behavior that causes a similar symptom.

What Paul has mentioned is Power Nap, not App Nap. Unchecking it will mean that email retrieval and Time Machine backups won’t be done while the computer is sleeping.

The article at the link below has a good discussion of App Nap.

Mark, the app nap switch is on your iMac.
1 click on the apple icon on your desktop upper left-hand corner.
2 Second item down on the menu system preferences. Click on this.
3 on the systems preferences menu second row you see a lightbulb that says energy saver. Click on this.
4 when the energy saver opens you have a selection of five boxes beginning with prevent computer from sleeping automatically when display is off. Leave this button alone. The last button says enable power nap. This item is automatically checked. All you have to do is on check the box.

That's it.

Power Nap explained here; it is only in play while a Mac is asleep.
https://support.apple.com/en-us/HT204032 <https://support.apple.com/en-us/HT204032>

App Nap should not be confused with Power Nap <https://support.apple.com/en-us/HT204032>, a similarly named feature which allows your Mac to do things like download updates or create backups while suspended. The two features are unrelated.

The above is from this article.

I have for sale a complete get on the air package.

Everything was purchased new on 5/28/2016 at HRO Salem NH except the DVAP.

Icom ID-51a Plus

RT Systems Programming software and cable

Speaker Microphone

CP-12L cigarette lighter plug (never opened)

Internet Labs DV Access Point 440

I recently moved from New Hampshire to Georgia and there is no DSTAR in the area.

Asking $675 or best reasonable offer.

Photos can be made available, I just dont have any at work.

email me direct at: KG4WWH at GMAIL . COM

From: poundbrass@...
Topic: 4264 Message: 4296

I thought I understood this App Nap business, but I now find that I am one of the bewildered. I was running 1.04 with some previous version of OS-X. I had gone to the Get Info menu and disabled App Nap. I updated the OS to Sierra, and I updated DVAPTool to 1.05. I went to the info tab where App Nap used to be. Its not there anymore.

Did 1.05 take it away or did Sierra? Does it still time out? I have attempted to test the time out, but have inconclusive results.

I don't know any reason to use 1.05 when 1.04 works perfectly on Sierra. App Nap is available when running 1.04. I ended up installing 1.05 and reinstalling 1.04. everything works great.

As for 1.05, I don't know what fixes or features are in it vs. 1.04.

4305. Can I Use DVAP With Just A Laptop?

Yahoo group: DVAPDongle
Date: 2017-01-10 17:43:36 UTC
From: jmacbops@...
Topic: 4305 Message: 4305

Perhaps a silly question but I've searched and cannot find an answer. I have a DV-AP and it works pretty well. The challenge is operating the radio. I have an Icom ID-51A Plus and it works but the documentation is lacking, the display is tiny, there are few controls, and simple things like entering reflectors and nodes that aren't in Icom's pre-programmed list are difficult and can be tedious. I was able to listen and make contacts this weekend but the ID-51A isn't user friendly.

My question is could I download the DVtool software for the non-AP dongle and use it with the DV-AP dongle?

I know Internet Labs would prefer to sell me one of each but I was wondering if anyone else had wanted the flexibility of both options (using a radio and using the pc/laptop directly) and tried it. I would like to be able to use the radio and the laptop without having to switch dongles.

Thanks! 73

No, you cannot. The DVDongle has a chip inside that encode/decodes the digital stream into analog voice. The DVAP does not contained this chip because the radio does the encode/decode.

I am not sure your level of technical ability but if you are comfortable with tech one of the best things you could do is setup your DVAP with a Raspberry Pi. If you load something like the Maryland DSTAR image which includes IRCDDB then you could control reflector use, etc. through a tablet or phone. The interface for IRCDDB is pretty easy to use, you would just need to get everything setup in order to use it.

The Maryland DSTAR package is pretty easy to use and setup and there are good walk throughs available online. It would definitely be worth looking into.

4315. DVAP & App Nap with SIERRA..

Yahoo group: DVAPDongle
Date: 2017-01-12 17:22:44 UTC
From: Javier NM6E
Topic: 4315 Message: 4315

FWIW,

I've been testing with 1.05 and 1.04 and have come to the same conclusion, 1.05 "goes to sleep" with Sierra while 1.04 goes on-&-on with no problems,

I've gone into system preferences, energy icon and modified the "Enable Power Nap" to no avail.

Thanks to the link provided by Dennis KD7CAC in a previous thread (http://www.howtogeek.com/277414/what-is-app-nap-is-it-slowing-down-my-mac-apps/ <http://www.howtogeek.com/277414/what-is-app-nap-is-it-slowing-down-my-mac-apps/>) their is a command that disables the entire APP NAP functionality on the computer.. In my case, i am using a MacMini (Late 2014) with MacOS Sierra 10.12.2 which is dedicated to ham radio and some occasional browsing and also has Windows 10 (BootCamp) for my DOS based logging/contesting programs/Digital modes (WriteLog, FLDigi, DigiPan, MicroHam Microrouter SW to my Microham Keyer) etc.

In the link from Dennis, at the end of the article, there is some syntax in a terminal command line you can enter to completely shut off Apple APP Nap entirely on the computer (maybe not so good if you have a laptop, it will never sleep and your battery consumption will go out the door)…

I ran the following command in a terminal (just like in the 'how to geek' link above):

defaults write NSGlobalDomain NSAppSleepDisabled -bool YES

I rebooted my MacMini Sierra and launched DAVAP 1.05 and the DVAP did NOT (has not) gone to sleep and the reflector I logged into has been going/working for 12+ hours..

Obviously if your running a lap top, that's not good if it's on batter power only…

To re-enable the App Nap (globally) for the computer (I have yet to do it) the link says to enter the command string into the terminal line:

defaults delete NSGlobalDomain NSAppSleepDisabled

So in the end, it appears the DVAP developers may have NOT included the feature/access to App Nap in the new image.. If you look at the file size between the 1.04 and the 1.05 versions, there is much less code on the 1.05 (used to support the 220Mhz DVAP dongle, so I hear..

Either way, if you're running on an AC powered Mac (all the time) globally disabling App Nap (with ver 1.05) is the only way I found it to work..

I am no expert in anything Apple/IOS/DVAP, I was just tinkering and following some of the comments mentioned in this thread.

I have 2 other Mac’s that I use my DVAP with, my corporate issued MacPro still on Mavericks per IT Policy and ver 1.04 will stay their as the working image and my personal MacBook Air will also stay with 1.04.

If you have it on an AC powered iMac/MacMini, the above is a workaround for what appears to be a feature NOT included/ developed in the DVAP code for ver 1.05.

YMMV…

4317. Cannot set device receive frequency

Yahoo group: DVAPDongle
Date: 2017-01-18 17:18:42 UTC
From: eemore@...
Topic: 4317 Message: 4317

New DVAP user here and am having difficulty setting up the dongle.

After imputing the Calsign and frequency into the DVAPTool application, I notice in the script window that a line reads: Cannot set device frequency. This makes sense because when I transmit with my TH-D74, I see the incomming signal strength in the DVAPTool but it is not hearing any Digital data from the Th-D74.

Any thoughts? I wonder if this DVAP is bad?

Ed

defaults write NSGlobalDomain NSAppSleepDisabled -bool YES

I rebooted my MacMini Sierra and launched DAVAP 1.05 and the DVAP did NOT (has not) gone to sleep and the reflector I logged into has been going/working for 12+ hours..

Obviously if your running a lap top, that's not good if it's on batter power only…

To re-enable the App Nap (globally) for the computer (I have yet to do it) the link says to enter the command string into the terminal line:

defaults delete NSGlobalDomain NSAppSleepDisabled

So in the end, it appears the DVAP developers may have NOT included the feature/access to App Nap in the new image.. If you look at the file size between the 1.04 and the 1.05 versions, there is much less code on the 1.05 (used to support the 220Mhz DVAP dongle, so I hear..

Either way, if you're running on an AC powered Mac (all the time) globally disabling App Nap (with ver 1.05) is the only way I found it to work..

I am no expert in anything Apple/IOS/DVAP, I was just tinkering and following some of the comments mentioned in this thread.

I have 2 other Mac's that I use my DVAP with, my corporate issued MacPro still on Mavericks per IT Policy and ver 1.04 will stay their as the working image and my personal MacBook Air

will also stay with 1.04.

If you have it on an AC powered iMac/MacMini, the above is a workaround for what appears to be a feature NOT included/ developed in the DVAP code for ver 1.05.

YMMV…

If you are trying to connect to a repeater you cannot connect to a repeater. Connect to the list of reflectors that in a file of your radio. To connect to a repeater you would choose a repeater that is connected to a select reflector. I always connect to reflector 12 Alpha. 12 Alpha covers the southern half of California which is connected to about 14 repeaters. You need to purchase the book called "Nifty easy guide to d-star operation" (Third Editon). This book has everything you need to know about the D-star operation in a very easy to follow plain English guide.

Have you considered running the DSTAR COMMANDER image file? The image comes complete with operating system and the dstar program is a spinoff of G4KLX and is "rock solid". It will run with or without a monitor and keyboard. It is by far the most popular image running a DVAP on the Raspberry Pi.

The official release is at dvapdongle.com/downloads/DVAPTool-1.06-rpi.tgz. If you search for NJ6N's raspberry pi installer, I think it uses that version (which works with 125cm DVAP).

From: kc4yoz@...
Topic: 4251 Message: 4344

You do it the same way as you would for a reflector -- callsign, band module, link verb, all in the URCALL field.

Remember that the first six characters are reserved for the callsign, so if the gateway's callsign is less than six characters you need to pad some spaces on the right to make it six characters. Add in the band module letter for character 7, and the "Link" verb "L" makes 8.

From: maxwellld@...
Topic: 4251 Message: 4345

Andy,

To link to a repeater you will put the repeater call sign in the UR field. Be sure to put the module letter in the seventh position and an L in the eighth position.

If you are using the DPLUS image you will leave RPT1 and RPT2 blank. I use the Commander image with the raspberry pi and RPT1 and RPT2 are left blank.

Good luck,
73,
Lew, KB5HPT

Attachments: 1 described; binary payloads are missing from this source WARC

hello folks,

I believe that something changed in the Jessie distribution, which the current installer is breaking.

I am running
- DVAP Tool 1.06
- DVAP dongle serial #AP752017
- logfile from /var/log is attached - from the working tool that is...

I just followed the instructions above (yesterday), and upon letting the PI3 boot, initialize the DVAP Tool, the dongle and giving it a minute to stability, I try to establish a link. In this case I am using REF001C as an example. My radio is an Icom ID51.

The command fails. The dongle reports "Remote system unlinked". The log file (on /var/log) says "gateway is busy" as the error message.

The only way I can get it to work is by killing the dvapcontrol process and the associated DVAPTool processes that are launched on the virtual screen, and then opening manually the DVAPTool...

I tried this both physically connected via keyboard and mouse, and via VNC from a Mac and from an iPad.

The behaviour is the same, which leads me to believe it's something not getting initialized properly, or an incompatibility with the latest and greatest Jessie version (4.4.38-v7+)

I did run apt-get update and apt-get upgrade therefore it's something in the libraries that is breaking the code.

Thanks for any help and pointers.

Regards

Hermann

It would be nice to receive something definitive on this subject from the DVAP designers. Do they monitor this group ? I have read that it "might" be related to "Dstar Administrators" and i have also read that the "Gateway unknown" issue that i get when trying to link to a repeater (not reflector) is a fairly common DVAP software issue that may be a timing issue between the software and the dongle. Ok, here is your definite response.

Some gateway admins allow connections from dongles/dvaps/hotspots, some don't. If they don't, you will get a "Remote system unlinked" response back, not "Gateway unknown".

The "Gateway unknown" message means "Gateway unknown". The dplus name server does not currently have a gateway with the the callsign you are using listed as active. You get a current load of active repeaters/reflectors every time you click "Open" on your device in DVAPTool.

It would help if you gave the value you are using for URCALL in your radio to link to a gateway that you are having a problem with.

DVAP are not programmed from the factory. they are set thru the
software that controls them to assign the frequency you want to use.

From: K2HVE
Topic: 4363 Message: 4363

I have been using RT Software all along to link to repeaters no problem. Make sure you program the 8th character after the call sign for the command in the CQ column. Example "W3EOCBL". This is the W3EOC "B" as to the Module and "L" in the 8th character as to the command. Substitute CQCQCQ to make the call after linking .
U in the 8th (W3EOCBU) to unlink..

Chris K2HVE

Thanks Robin. I am not sure what you are describing relating to URCALL and "gateway unknown" . I am trying to link to a known repeater (KC3ESS) that is run by a friend who wants my to occasionally link to him. I have also tried to do the same with VE3PLF which is a repeater associated with the system that I registered with when first starting with DStar. Using RF repeaters I can link but not with a DVAP. At least the sysop of the KC3ESS repeater says I should be able to link, he has no known settings that rejects DVAP users.

In the URCALL field within RT Systems software I have tried "KC3ESSBL" or "/VE3PLFBL" formats but both give unknown gateway. Perhaps using your own DVAP you can give a try ?

From: K2HVE
Topic: 4363 Message: 4366

Note: I should have left a space after the call and before module B to make L the 8th character.. W3EOC BL Or you could just count out 8 spaces and put your command -------L in the command column.

Hi Andy. KC3ESS is registered as a user, not a gateway. While VE3PLF is registered as a gateway, it is not currently functioning as such. The user VE3PLF is using a hotspot to access the dstar network.

Sorry to bombard you with questions.... but can you explain why I can use VE3PLF repeater via RF on 70cm and then use a link command command from my radio to connect to the KC3ESS repeater but can access KC3ESS via DVAP? I would have assumed KC3ESS not being registered as a "gateway" would impact things whether it was RF or DVAP , no ?

VE3PLF is running a hotspot or software that looks like a hotspot. You could run your dvap in the same way and allow folks to use it. That wouldn't make it a repeater.

Which image for the Pi are you running? Maryland, D-STAR Commander, Western? Depending on the image some of the reflector types may be disabled by default. Also, you may need to update the host file before you are able to connect.

4377. Why goes DVAP hang on transmit in like an FM mode

Yahoo group: DVAPDongle
Date: 2017-03-03 16:26:58 UTC
From: beischel@...
Topic: 4377 Message: 4377

My DVAP has been doing this for years and it is very annoying. At least once a week, it hangs on transmit (will do this on its own with me using it). The LEDs are showing both red and blue. Any of my DStar radios set to the DVAP frequency are receiving the DVAP, but it is flashing the FM indicating it is not receiving a digital signal. I have to reboot the RPi, or restart the application if it is attached to a Windows or Mac system.

Anyone know why this happens or what could be kicking it off into this condition?

For the first time the other day, while I was using the DVAP, it suddenly went into this condition.

Any help is appreciated.

Duffy

Hi, I am using a dell netbook with windows 10. It stopped working with the dvap and star board
After one of the windows updates however, If You put windows 10 in test mode it seems to work just fine... To enter test mode You :
To enable Test Mode on Windows, open an elevated command prompt (Press Start->Search->cmd then right-click on it and click Run as administrator) and enter the following command:
bcdedit /set testsigning on
and reboot after running the command above.
To exit test mode run the same script replace the on with off and reboot..

Hi Al. That is normal. When you are simplex, the radio should put DIRECT in R1 and R2. That is what the DVAPTool software expects.

Is it not working for you?

From: Richard Kraatz
Topic: 4397 Message: 4399

No sure what you are trying to accomplish. If you are trying to use a repeater, use repeater frequency and offset. If you are trying to use a reflector, choose reflector from drop down list and use your simplex frequncey.

Just purchased a Pi 3 and installed the March 3 2017 version of Raspbian on a fresh SD card (32gb) successfully and got the wi-fi working as well. .I didn't install NOOBS since that was an option. I need instructions for installing DVAP Tool 1.5 on the pi. I have no preference on auto or non-auto boot but it would would like to have a choice of instructions on the table if I desire implementing the auto boot in the future. I found some helpful instructions on what I was looking on line for but they are over four years old. I figured things have changed since then.

Most likely I will not have any problems using the command prompt method if necessary if that is the only choice for a successful installation.

73 & Thanks,

Dave WA6UHA

Actually, You'd be better off if you do have an app for android since most modern tablets and phones do have the OTG (On The Go) capability that's needed (aside from iPhone). I would love to have the app just so I don't have to bring along a Pi or a Pi Zero W. But, I guess those like us will have to wait.

Hi Dave,

The 4 year old way of starting the software should work. Otherwise, there are raspberry pi images that have all the software you need and want to start automatically. I'm assuming that you want to learn a bit about the operating system and what not. If so, start with the info you have found and have some fun.

Yes it is, but I believe that the problem may be in the programing of the ID-51n as I want to use the DV Access Point to connect via the internet to our repeater When I launch the DVAP Tool, it is not bringing up a window where I can input the repeater information.

Thanks,

Al N2MA

The DVAP Tool isn’t going to give you a window to input data. You issue a link command from your radio telling the DVAP to link to the desired repeater, provided the repeater allows internet linking! I would recommend contacting the admin for the repeater to determine if linking is allowed. Your local club or whom ever sponsors the repeater may provide local training on using the system!

From: rrmacku@...
Topic: 4406 Message: 4406

Is there an up to date image for a 125cm DVAP to run on a raspberry pi?

I have had it working fine for a month but messed around and started over and know get a not linked message and cant get passed it. It all works fine from my computer so it has to be with the pi image.

Topic: 4406 Message: 4407

I am running nj6n and it works (worked) great but now I cannot get past "remote system unlinked" I did start with a fresh jessie image but nothing else has changed.
The dvap works when plugged into my laptop so I know its not my radio settings.

I have tried wireless, ethernet cable, hot-spot to my cell phone.?

I love troubleshooting but I am stumped. I cannot find another image that supports 125cm so trying that is out at this time.

Thanks again, everyone is so helpful.

From: rrmacku@...
Topic: 4406 Message: 4408

I have tried connecting to multiple reflectors using different wifi in different location.
Tried an older version of Jessie. Again can not get past the "remote system unlinked"
The DVAP and radio link fine from my laptop, and run fine from my pi3 for a month. The only thing I did was erase my sd card and start over. I have restarted 6 times each trying something new.

I have googled the problem for days and have read everything I can find.
I am out of ideas?
Randy

4409. Re: image for 125cm

Yahoo group: DVAPDongle
Date: 2017-04-06 19:00:18 UTC
From: scottbigger@...
Topic: 4406 Message: 4409

I had the same experience with my Pi 3.
It worked great for a couple months. I was using the built in WiFi, newest version of Jesse and DVAP 1.06 software. Everything was great. I could connect thru my home router and even my iPhone HotSpot.

Then one day I just started getting the "Remote system unlinked" and could never get past it.
The WiFi showed it was connected, but just didn't work.
I tried making a new image, reloaded the software, applied al the required patches. Nothing worked.

Then, I tried a new Pi 3 with the original image I made and its worked great....

Don't know what the real issue is, but the problem followed the hardware.
I've switched the working image back to the original Pi 3 and it doesn't work.
Somehow, something happened to the WiFi hardware. Either it failed, or a setting that stays with the
hardware changed. Don't know if any of the settings stay with the hardware?

Hope this helps.

Scott

W6kd.boards.net

Version 2.02 of Star commander works great with the Pi Zero W.
Just remember to do a clean shutdown of the Pi (rf command) before you power down.

The only problem with dv node is the last version to be released was in 2015. It appears they have abandoned the project and are not even responding to email. Yes it still works to an extent but there are still issues with the software such as not being able to connect to all of the modules available on the DPlus reflectors as they didn't exist when the software was updated.

Don,

I can't thank you enough for your sequence of videos explaining the exact setup procedure for a DVAP and the Kenwood D74a. The videos have allowed me to set up the software, hardware, and radio the first time through!

Each new video lets us see another feature! Nicely done.

How about a video that show the exact sequence of contacting a local D-Star repeater with the D74, and how to use the repeater not only for local communication but also for "aiming" the local repeater at a reflector like 30 Charlie? I'd certainly appreciate such a video. We do not have a local D-Star repeater but I will be travelling to cities that do and I'd like to have a "heads up" on how to use those repeaters.

Thanks again Don,

Barry WD4MSM

Dayton 2017 Activities
It's time to start the pilgrimages to the Dayton Hamvention(r). There's several D-STAR activities going on. Hope to see you there. Here's a summary of what you'll see.
Ed WA4YIH
www.DSTARInfo.com
Dayton Hamvention(r)

120 Fairground Road, Xenia 45385

Coordinates are 39.7021N - 83.9420W

GPS will not necessarily show the correct directions after entering Xenia. It may take you through closed gates.

The Hamvention is recommending using off-site parking

Talk In
For directions and assistance in the Dayton Area during your visit to Hamvention(r), contact "Talk-In" on the DARA Repeater 146.940-, alternate 146.985- 123.0 PL. The talk in crew will have up to date information on traffic conditions and parking and will be able to provide re-routing directions if needed. Talk In will be on the air starting at 7 a.m. on Thursday and Sunday and at 5 a.m. on Friday and Saturday. Be sure to listen.
D-STAR Activities at Dayton
Thursday, May 18, 7-9 PM - Pre-Hamvention Meet, Greet, and Eyeball QSO
Marion's Piazza
1320 N Fairfield Rd
Beavercreek OH 45432
Friday, May 19, 12:00-1:00 PM - D-STAR Forum
Forum Room 1
Dayton Hamvention
Friday, May 19, 6:30-8:30 PM - D-STAR Friday Evening Gathering - D-STAR Updates
Drury Inn Ballroom
6616 Miller Lane
Dayton OH

4434. DVAP in "Receive Only" Mode

Yahoo group: DVAPDongle
Date: 2017-06-03 21:37:21 UTC
From: wmcclatchey@...
Topic: 4434 Message: 4434

I have used DStar for some time, but just recently have acquired a DVDongle and begun to set it up. Registered on my local DStar repeater, mode C

The Equipment:

MacPro 15" running OSX 10.12.15

The Software:

Downloaded the most recent FTDI driver from their web site as of 6/1/'17 and installed prior to installing DVAP Tool.

DVAPTool for Mac, Ver 1.05 installed without difficulty. Setup for 147.550. Green light slowly pulsing on DVAP after connecting.

Using the Kenwood TH-D74, configured in DStar simplex mode on 147.550. I connect to the DVAP to the 30C Reflector with the DStar URCALL command "REF030CL". I receive the voice message that the DVAP is connected to 30C. When I move the command to "CQCQCQ" I cannot transmit, and the DVAPTool lists me as connected but on "R/O". If I disconnect the DVAPTool and reconnect with no changes in the command structure, the DVAP will link on command, but still not allow me to transmit using the URCALL "CQCQCQ" on the D74. When I key down to transmit, the D74 receives a message from the DVAP that I am not linked. I am able to monitor 30C without difficulty.

What am I doing wrong to obtain this behavior from my DVAP?

Any help appreciated!

Bill

4441. Failed to connect

Yahoo group: DVAPDongle
Date: 2017-06-05 15:31:11 UTC
From: f1rmb.daniel@...
Topic: 4441 Message: 4441

Hi,

I've just bought a second hand DVAP (2m version), and I'm experiencing problems under Windows 7 and Linux.
When I hit "Connect" button in DVAP-Tool (1.05), I always get this error message:

"DStar name server text message received ->It looks like you are connected to a USB serial device other than the DV Dongle. Please check your device selection."

Obviously the serial number is wrong, I've also checked with "DvapUtils.exe", and it displays such garbage as a serial number, even longer sometimes.

I searched this group, and it seems few people got this problem as well. Can someone help me to fix glitch ?

Cheers.

Hi Daniel. The number one cause of this is updating firmware when you should not. Perhaps the previous owner did this. There is no firmware posted at the official site and anyone that finds a link elsewhere is taking a risk.

Send a direct email to support@dvapdongle.com and I'll work with you to get the firmware to the correct version.

DO NOT hook an AMP to the DVAP. it will cook the chip inside. yes you can use an outside antenna. why not jusy make it portable and take it with you then you will have coverage where you need it.

Topic: 4451 Message: 4452

Jeff, the well known image called DSTAR COMMANDER is one of the most stable programs that runs very well on the Raspberry Pi 3 and DVAP combination. Although there are a few other versions of the image being used successfully, in my opinion D-STAR COMMANDER is the way to go and has a great track record for not crashing for no reason. Ask others out there as I'm sure they will agree with me.

Look on W6GPS Yourube video showing the 7" screen and in the comments below is the link to download the image. Also, Dstar Commander is written for RP3. Both are good programs.

I have two DVAP/Raspberry Pi units. One has a 7" touch screen (see W6GPS on Youtube) and the other is "headless", no screen. On the headless unit, I use DSTAR COMMANDER. Set it up (with any HTML monitor or TV) and you don't have to set it up again. But for the unit with the screen, I like the W6GPS image program because, the text and icons are large enough to make changes in the WiFi. So, if you are travelling and will use someone else's Wifii, like a motel, the W6GPS image is easier to do this on. The great thing about the Raspberry Pi is that all the data is stored on the SD card, so you can image two SD cards, each with a different program and just switch cards. On the W6GPS program, you need the screen to turn the unit off. With the DSTAR COMMANDER image, all this is done directly from the radio.

I have not had any problems with either image. Both are great for their application.

Yes you are registered ok, the checker is only explaining something it cannot yet decipher correctly from the new G3 gateways.

What problems are you having with the DVAP?

4458. DVAP will not connect

Yahoo group: DVAPDongle
Date: 2017-07-01 22:40:35 UTC
From: Bill Brown
Topic: 4458 Message: 4458

This dvap has worked for over a year with no problems then suddenly it does not connect.Nothing in the computer or the ID-33 were changed, dvap screen appeared normal with serial number an com 3port opened but does not connect.Checking the black screen all was normal until the following lines were noticed.
Reported Device calibration value (-1)
Reported Device transmit frequency (445950000)Reported Device receive frequency (445950000)
Cannot set device transmit frequency Cannot set device receive frequency
You are running latest version of DVAPTool.Asap device started

Any suggestions you might offer will be appreciated Bill - w5umq

Hi Bill. If you are plugged into a USB hub, try connecting directly. If connected directly, try a different USB port. If that doesn't work, copy the full message and forward.

Mathew,

I don't use a Pi but is it a problem with the app not seeing the DVAP Device? Maybe driver. Make sure the Pi isn't sleeping. Need more details on the issues. Someone that uses a Pi might be able to help more but more than happy to try.

Switch you software to D Star commander. D Star commander can be found at www.w6kd. D Star commander is a complete system built on the Raspberry Pi for the Raspberry Pi. Woks well with the UHF version of DVAP.

From: Wolfgang Haugk
Topic: 4464 Message: 4464

Greetings,

Can I install DVAP dongle installation software on a cellphone running Windows 8.1 or higher?

The background of my question is that I own IPhone/IPad's (not Mac) and I do NOT want to get into using Pi's or full blown pc laptops for mobile DVAP operation. I am wondering if an inexpensive windows-based cellphone could be a solution for DVAP software installation and maybe even hotspot internet access.

Thank you in advance for any info you can share.

Regards,

Wolfgang (K4WHH)

From: aa4rc@...
Topic: 4469 Message: 4470

Hi Ed. The DVAP is very different from a DV Dongle. The DVAP has an rf modem chip so it can talk to radios that already have an AMBE chip. The DV Dongle has the AMBE chip so that audio can be "vocoded" to dstar standards and can be used on a PC with a mic and speakers.

That's the long answer for "no, the DVAP won't work with DVTool and speakers/mic".

Simplex operations do not prevent connections to other reflector systems. You need to download 3rd party software to talk to them.

There is no DVAPTool 2.1. You have installed DVTool 2.1 which works with the DV Dongle, not the DVAP.

You can download the latest DVAPTool from www.dvapdongle.com http://www.dvapdongle.com

From: cbwovbun4kvmhuosgoukxsplabdmnutmbqnczm2x@...
Topic: 4499 Message: 4499

How can I increase the size of the graphic interface? It is only about 1.5 inches big which does not allow me to enter the frequency, my call sign, or to open it. I did try to change the display resolution which did not help? I have a new HP laptop with recommended resolution of 3840x2160 with text set at 250% magnification.
Thank you.

Hi Gary,

You picked the wrong repeater to try and link to. It is out-of-sync with the network (20 days and counting). I can't connect to KO4EOC either. Your configuration would be correct for linking.

Hello Andy, K3UK,

I can't answer your question when it comes to using RT systems software. I can say that the radio should be simplex and nothing is needed in R1 and R2 fields. Linking to a repeater is the same as a reflector. Example: UR shall be "W4AES BL" to connect to repeater/gateway W4AES on port B. Note I have a space since the call is only 5 characters. The port and "L"ink need to be in the 7th and 8th positions respectively.

4505. Registration on Icom GW v3.0

Yahoo group: DVAPDongle
Date: 2017-11-01 02:09:23 UTC
From: jlbates4@...
Topic: 4505 Message: 4505
Attachments: 1 described; binary payloads are missing from this source WARC

I am the GW admin for the W4FJ repeater stack in Richmond Va.

I have a user who has tried to register on our v3.0 system. (see screenshot) Entry 1 has a space and entry 2 has an A and AP checkbox.

The user is getting the RO error from the log and can not connect RW to REFxxx or Icom GW's.

The dplususerls shows:
Local users registered with terminals added including space:
[K8LIN] [2017-10-29 16:50] [k8lin.bca@gmail.com] [Bradley Abernethy]

remote client connect request from 100.7.50.115:56267 len 5 2017/10/31 21:42:00.044
login request from 100.7.50.115:56267 K8LIN :AP700324 RO passed 2017/10/31 21:42:00.073
usertablecnt 83741 unique callsigns 55417

The directions on Step #9 of the D-Star Registration page no longer work vo v3.0 of the GW software - I can not enter a hostname on the new personal information screen:
http://www.dstargateway.org/D-Star_Registration.html
http://www.dstargateway.org/D-Star_Registration.html

Any help or suggestions on how to get this user to RW mode would be greatly appreciated!!!

Check with the repeater administrator. I tried to pull up their dashboard and nothing came up. That tells me they are currently not linked to the Dstar gateway. This may be a temporary issue, or a permanent decision.

Check it out yourself: <repeater callsign>.dstargateway.org

Hello Calvin,

When I go to that link it brings up the dstar reg. page.
The repeater IS connected to the gateway, I heard people talking on it last night.
http://www.dstarusers.org/viewrepeater.php?system=KO4EOC
http://www.dstarusers.org/viewrepeater.php?system=KO4EOC
I tried linking to some other repeaters.
One of them replies "remote system linked, receive only."
Another links without any problems.
It's just the KO4EOC that says "remote system unlinked" when I try linking to it.
Must be the way they have it set up.

Thanks for you input,

Gary, N4GLL

I again tried to open their dashboard >>> http://ko4eoc.dstargateway.org/ http://ko4eoc.dstargateway.org/ <<< and nothing happens. I see that it is an EOC center and I would assume it would want open access to the world in case there was a local emergency. Check with the repeater trustee, or some other local hams to see if they are having similar symptoms.

4511. DVAP with Pi-Star

Yahoo group: DVAPDongle
Date: 2017-11-13 03:26:30 UTC
From: mitchsfm@...
Topic: 4511 Message: 4511

I just am getting back on D-Star after a long hiatus. I have a hotspot which is a VHF DVAP/Raspberry PI 3. The RPi software is the latest version of PiStar. My radio is an Icom IC-51A, the original model. I had it working fine with a RPi three or four years ago, but have forgotten everything I learned about D-Star since then.

I finally think I have it working getting connected to a reflector. I can also connect to the local VHF D-Star repeater with the hotspot.. But I can't seem to have the repeater connect to a reflector after I connect.

Anyone have something they can point me to which explains how to use a hotspot to connect to a repeater and then to a reflector. The reflector I am trying to connect is REF058A or REF058C.

Thanks in advance for any assistance.

You may not have permission from the reperator owner to link and unlink the machine. Just connect direct to the reflector.

Good afternoon, Mitch. I am no DSTAR expert, but I'm curious. Why would you want to link your hotspot to a repeater, and then the repeater to a reflector? I would just link the hotspot to the reflector. 73.

4516. DVAP Tool 1.05 "No DV AP Dongle found"

Yahoo group: DVAPDongle
Date: 2017-11-22 20:49:45 UTC
From: avavra1@...
Topic: 4516 Message: 4516

I'm having several problems since I upgraded from 1.04 to ver 1.05.

First I get an error message "No DV AP Dongle found"

When I unplug and replug my DVAP and attempt a second connect I get a new error message "No Gateways Found."

Then when I cancel out of everything and re-start I get the welcome message "You are running the latest version..." which runs ok for a couple of hours after which I get the "Not currently connected" error message and am unable to reconnect without repeating all of the above.

Any thoughts as to what I might be doing wrong or how to prevent this from happening again?

I am running everything on a HP Netbook which worked fine until the newest software update.

Thanks in advance.

- Andy, KD3RF

4519. Uhf dvap issues

Yahoo group: DVAPDongle
Date: 2018-01-04 04:42:43 UTC
From: Warren Kean
Topic: 4519 Message: 4519

Hi I am trying to trouble shoot a dvap dongle uhf version,
unit was working fine connected to raspberry pi then started to develop issues,
I am not sure if it is a PI issue or a dvap issue
so far i replaced usb cable between dvap and pc I removed pi from equation and downloaded dvap tools 1.05
when i start program it see's the dvap (com 3) and says its opened but when I key up on say the repeater status on the log page it says its ignoring radio because its not in simplex mode
I know the radio is in simplex mode because I use the same radio on my own openspot on a uhf simplex frequency, I selected a different uhf frequency other than mine but another one that the person that used to have this dvap used
and it still says not in simplex mode r1 r2 not set too direct??

any help would be appreciated just trying to rule out that the dvap is at fault

Thanks
Warren va7rc

It looks like you have increased your system font size. You will need to compensate by running DVAPTool in a command window with the option "-fontscale NN" where NN is 30-70. Try 40 first.

"DVAPTool -fontscale 40"

Hi:
Not sure if this will help but look at this:
It sounds like you need to calibrate your DVAP. It is a simple process. Open DVAPTool version 1.05, click open on the device box, and hit CTRL-C (or CMD-C on Mac). That will bring up the calibration window.
Write down the calibration value. If the value in the calibration dialog box is not "46", enter that number and hit test. You should hear audio from the device on your HT. Then click program to finish. Another CTRL-C will close the box.

I am not sure if it is a PI issue or a dvap issue
so far i replaced usb cable between dvap and pc I removed pi from equation and downloaded dvap tools 1.05
when i start program it see's the dvap (com 3) and says its opened but when I key up on say the repeater status on the log page it says its ignoring radio because its not in simplex mode
I know the radio is in simplex mode because I use the same radio on my own openspot on a uhf simplex frequency, I selected a different uhf frequency other than mine but another one that the person that used to have this dvap used
and it still says not in simplex mode r1 r2 not set too direct??

any help would be appreciated just trying to rule out that the dvap is at fault

Thanks
Warren va7rc

4529. DVAP Red firmware

Hello,

I have a Red DVAP on V1.03

I am suffering with problems of it going into continual TX i have to reset it and it is ok.

It is running on a Raspberry PI.

Where can i down load the latest version on the boot firmware?

Thanks

Matt

The PTT lockup problem occurs when using a VHF DVAP with all images based on the G4KLX suite. There is no firmware fix.

The UHF DVAP has a newer firmware and does not have the problem. I sold my VHF DVAP and bought the UHF DVAP.
That solved the PTT lockup problem.

Hi Matt!

You did not indicate what software you are trying to use to run the DVAP.

For some reason that I do not understand, the VHF DVAP will only run reliably on the DVAPTool software … At least that was the case when I gave up on it … It will do exactly what you describe with all the Raspberry Pi distributions out there …. I have not tried PI-Star, but the others I tried would not run reliably, and it is a known problem that a lot of people do not know … and there does not seem to be a solution … Unless Pi-Star gets around it ...

When I was running the DVAP I used DVAPTool on the Raspberry PI .. that does work …

Good Luck! And if you get anything to work, please let us know!

Best Regards,

Steve/W3SMK

My VHF red DVAP is running flawlessly using Pi-Star. Pi-Star is a fantastic program. I am using the DVAP for dstar and also have two mmdvm_hs RPi Z W hotspots, one for DMR and one for YSF. Both of the mmdvm_hs hotspots are also running Pi-Star. The Pi-Star software is amazing! More info at pistar.uk and FB group.

Still having problems getting the radio to talk through the computer. But my main question is:
proximity to anther DStar Ham just 300 feet away from me. I am wondering if our closeness will impact our operations on DStar both using the same DVAP Dongle. Before I run out of time, I either find a solution to my connect problem and the proximity to the other ham or return the Dongle to DX Engineering.
Any thought most appreciated.

Wayne,
This should not be a problem, as long as you separate yourself in frequency from your neighbor. I have a DVAP that I use for DSTAR, and a DVMEGA that I use for DMR, both located in the same house. Actually, they sit side-by-side. I run one on 441.000 MHz and the other on 445.550 MHz. I see no interaction between the two. An easy test would be to find out what frequency your neighbor is using. Then tune your radio to that frequency for a while when you know he is operating. Good luck with the other problems. 73.

Robin,
Thanx for all your help. I am not very computer smart, or I follow instructions too explicitly.
I have two ways that I think I know hoe to run something from the command line interface;
Right click windows flag-icon lower left (START?)
Select "Run", "Command prompt" "Command prompt (Admin)"
On entering "DVAPTool -fontscale 40" without quotes the system can't or it is not a command, operable program or batch file.
Seems like I need to provide a full path name, but then there would be the extension?
As you can tell I am not knowledgeable with the command prompt.
C:\Program Files (x86)\DVAPTool.exe -fontscale 40 ?
I'll try both.with and without the extension.

By the way it works perfectly on the DELL XPS 8700 and other than the display or interface window it is works great on the Dell Inspiration Laptop
Both Windows 10 64 bit

Thanx for all your help
R,
Todd WB1HAI

Clearly I am doing something wrong here as well, becasue my two posts with screen shots are not here.
Well I did go into the command interface line and remembering my Amiga and DOS 3.0 days commands I changed the directory to where DVAPTool was and ran the program with fontscale 30. 40 was too large. Attached and maybe pasted is a screen shot
Thanx again for your help

Yes, you need two terminals in your DSTAR registration.
The default “blank” one is not enough. You need a separate terminal for every user that is simultaneously in-use.

See step #8 at: http://www.dstargateway.org/D-Star_Registration.html
It shows you the terminal page.

Yes, before you ask, you will need to remember your DSTAR registration password. If you’ve forgotten it, you will need to reset it via your local repeater admin. The only way to add new terminals is via your DSTAR registration.

Good hunting!

Well, one seemed to only stay connected for a short period of time (4 - 5 seconds) and then wouldn't reconnect again for a couple of hours. As soon as I switched the callsign on one (my daughter is licensed) then everything worked again. So before I set it all back (there were other issues with the 2nd hotspot that are now worked out) I wanted to ensure that I could, in fact, have 2 up and running at the same time (on different frequencies).

Terminal are not by user. They are for devices and are only needed if you
are going to run two or more devices concurrently, for routing purposes

I wanted a spare USB cable.
I tried several cables, finally called Robin
at Inet and asked for an official replacement. Supposedly one was sent but not received.
Evidently there is a difference from the common mini-usb cable to standard USB connector vs. the one used by the DVAP.
It may be a wire quality or some other issue.

From: gfarough@...
Topic: 4556 Message: 4556

Hi group

Anyone found software that will use computer mic and headset with the DVAP dongle uhf model?

Glen

DVAP IC-7100 ID-51a

4557. D-STAR Access

Date: 2018-03-08 16:47:33 UTC
From: Kenneth Holcombe
Topic: 4557 Message: 4557

Until recently, I was a member of the WSJT group and I remember how the moderators hated it when the subject was anything other than WSJT; there are, however, some closely related subjects hams sometimes need help with such as JT-Bridge or JT-Alert. If someone can direct me to another place to go for help, I will listen.

This VHF/UHF digital world is new to me and I'm moving through the learning process. Forgive me if the following is too much information, but we often had to ask hams on the WSJT forum for more details. I have a ID-5100A hooked up to a MacBook Pro running Windows on Parallels. I have the two meter DVAP Dongle installed on the Apple side. I'm running HRD Deluxe on the PC side and it connects fine.

I live in a small town (Boerne, TX) that has a few System Fusion repeaters. The closest two meter D-STAR repeater is WD5STR in San Antonio (22 Miles). They do not have a registration URL listed so I tried to register on W5KA in Austin. My registration was rejected, probably because I live over 90 miles away. I found an email address for the WD5STR administrator in San Antonio, but have not heard anything back. I also sent an email to aa4rc@... <mailto:aa4rc@...> but have not heard anything back. Any ideas?

From: allister_mclane@...
Topic: 4554 Message: 4558

Hi,

need your help please.

Working since many years with the red DV access point and rasp 3 without any problems. Now I tried for some reasons to connect the dongle with my Laptop Win7 64bit without any success. Try to link to a reflector I get always "Gateway unknown".

Same radio (Kenwood TH-74) no changes between rasp and Win7. RPT1 and RPT2 to Direct etc.

At the moment I have no idea where I can find my mistake. Any suggestions ?

Many thanks in advance.

The Internet Labs DVAP does not have a DSTAR CODEC chip inside and will not function as a computer only DSTAR dongle. It relies on the DSTAR CODEC in the DSTAR radio you use with it.

It cannot be done without additional hardware.
D-STAR uses the AMBE vocoder chip for its audio compression, see http://www.dstarinfo.com/ambe.aspx .
You need either: 1) a D-STAR radio, e.g. ID-51A, which has an on-board AMBE chip or 2) a hardware device that includes an AMBE chip, such as a DV Dongle.

The DVAP is a “repeater” that takes traffic from the Internet to RF, and RF to the Internet. It does nothing with underlying digital transmissions. For the actual audio processing, a DVAP needs a D-STAR radio to talk to (i.e. a device that knows how to encode/decode the audio stream).

My guess is what you are really asking for is a DV Dongle, or equivalent (http://www.dvdongle.com/DV_Dongle/Home.html)

I seem to recall needing to add the Initial to the call sign entered into the device but can't find anything related to that. Does the radio also need to have something altered in the setup when you have multiple devices?

You listed the reflector as REF010BL. That is the command string to link to the reflector. REF010BU would be the command string to unlink. After you link to the reflector you need to change your radio to the frequency your dongle is set to with CQCQCQ as the setting. Using programming software I setup my TH-D74 with memory settings to link and unlink to the reflectors I am interested in and one that is on my DVAP's frequency with simplex and set to CQCQCQ. I struggled with this same issue. Hope this helps.

2 DVAPs? No.

2 simultaneous uses of the same call sign at the same time? Then Yes. You need to create and use different terminals in your D-STAR registration.

Can you walk us through the steps that you are taking to link the DVAP to 10B ? And how you have verified that the reflector can “hear” you and how you know that users have responded to your call (it would be unusual for someone to actually say “CQ” on D-STAR)?

We need some more specifics if you can.

Thanks.

4568. Getting started with DVAP and ID-31a

Yahoo group: DVAPDongle
Date: 2018-03-19 19:28:20 UTC
From: sooliner@...
Topic: 4568 Message: 4568

Hi,

I am brand new to both D-Star and the DVAP. I bought an ID-31a, a red DVAP for 440, and after trying without it first, the RT Systems software for the ID-31a. I am having issues, and I am sure this is because I am new to this, but I tried to research both the internet and watch YouTube videos first. A lot of what I see is older, so I think that is where I am running into the issues. Here is what I have done so far.

I registered with a "local" repeater group. Local as in about 100 miles away being the closest group, thus why I am going with the DVAP. Here is how I am registered, and this is my first discrepancy. I confirmed with the group that I am registered, but the Icom video shows a page that has IP #'s and Computer Names. From what I could research, this is only needed now for certain radios, like the 1 GHZ version.

https://www.flickr.com/photos/28604432@N06/27034414168/in/album-72157694670274615/
https://www.flickr.com/photos/28604432@N06/27034414168/in/album-72157694670274615/

So, I went and downloaded the software for the DVAP. At the end, I will go through some troubleshooting I attempted that didn't help. But, here are my settings on the Tools, downloaded and installed Bonjour also. Comptuer is a Win7, 64 bit with a direct cable connection into the router, no wifi. I do get an error about 75% down on the black screen that says "Cannot set device receive frequency" However, when I open the device, I get the red bars to move when I key up the radio. With the device closed, I get the slow flashing green, when open I get a blinking blue.
https://www.flickr.com/photos/28604432@N06/27034413438/in/album-72157694670274615/
https://www.flickr.com/photos/28604432@N06/27034413438/in/album-72157694670274615/

This is my standard memories. Have tried the CQ and the Echo, but do not get a response from the DVAP.
https://www.flickr.com/photos/28604432@N06/27034414068/in/album-72157694670274615/
https://www.flickr.com/photos/28604432@N06/27034414068/in/album-72157694670274615/

My DR Memories. I had more, but with the issues I have been having, been working on this since Friday, I cut a lot until I get this working, then will add more. I have tried with Repeaters, without. When I add a repeater into the channel, I loose that when I go into the DR Memories on the radio. If you look at the current pic, I only have the reflectors without a name in the repeater columns. But using the CQ, the Echo, any of those, I cannot connect to the DVAP.
https://www.flickr.com/photos/28604432@N06/39095295990/in/album-72157694670274615/
https://www.flickr.com/photos/28604432@N06/39095295990/in/album-72157694670274615/

So, for troubleshooting, I have played with adding the repeater names, adding DIRECT, removing all, nothing has worked. I tried two different cables to the DVAP. I have tried different USB slots on the computer, I have 6 total. I have downloaded the tools program and looked at the scope on it to see where the radio is transmitting. It was a bit off the center of the 431.050, more like 431.200. So, instead of changing any calibration settings, I just changed the frequency in the main Tool program to 431.200. That didn't do anything.

I really did do a lot of research prior to asking for help, but could not find the thing I am not doing correctly. Does anyone have an suggestion to try?

Thanks and 73,

Jeremy, N8YP

4569. Red DVAP and WinDV

Yahoo group: DVAPDongle
Date: 2018-03-22 15:20:42 UTC
From: cqcqcq@...
Topic: 4569 Message: 4569

Hi All
Using a Red DVAP, TH-D74 and Win DV to run the DVAP.
When using WinDv I can access XRF reflectors if I change the setting from what seems to be the default of Dextra to DPlus. (I can never access an XRF using the DExtra setting.)
However when linking to XRF reflectors from the TH-D74 I can never connect. Seems like when WinDV is getting linking commands from the TH-D74, WinDV defaults to using the DExtra setting.
Has anyone had this problem and is there a fix?

Thanks in advance.

Hi Jeremy, N8YP,

I do not have a 440 DVAP. I do find the +150 KHz frequency error and the startup not able to set the rx frequency to be concerns. I would have tried changing the DVAP to 430900000 in order to have it on 431.050 MHz, if your test measurement equipment is that accurate. I am assuming the radio has N8YP as your callsign in the MYCALL field. I am assuming the execute characters are in the 8th position of the URCall fields (E, I, U). I cannot tell from your pictures.

73,

James, N0XIA

One might get better results by simply stating call sign and location
and asking if anybody is around for a QSO.

I believe even going back into some of the old ARRL Technician License training video series and they mention not using "Q" signals on VHF & UHF frequencies. "Q" signals are a CW type of shorthand for HF and have their place there. I strongly agree they shouldn't be used on the VHF & UHF frequencies and anyone who does is just a poor operator. Local users have been trained to ignore anyone calling CQ on the local repeaters. To a degree it will get you ignored on my repeaters but if you insist on it, you won't like it when you do hear from me.

You can look at dstarinfo.com on the reflector tab and find your reflector and click on “stats”and see “last heard”and see if you make the reflector. I hope you registered your call or else the reflector will ignore you.

4579. Newbie Question

Yahoo group: DVAPDongle
Date: 2018-03-26 21:20:53 UTC
From: poppafred@...
Topic: 4579 Message: 4579

I have the ID-51A and the DVAP working.

I programmed the radio for REF030C and it extablished a link.

BUT

It displays connected to REF001C and not REF030C...

What am I doing wrong here?

Fred - KK5AA

From: poppafred@...
Topic: 4584 Message: 4584

I was trying to make certain that my used DVAP was running at peak so I asked in a couple of places about updating firmware. No one answered, either place.

So, I downloaded the DVAP Util, ran the firmware updater and stepped up to v1.07.

By now, you are thinking, "Oh, no!".

Yep, no serial number, no DPlus reflectors.

Does anyone know of a way to either revert to the original firmware or retrieve and restore the serial number? The DVAP is a 2009 version. It has the acrylic case and no serial number in or on the case. I have examined the circuit board with a magnifier loupe and see no numbers that could be the serial.

I cannot afford to buy a replacement and really need to get this one fixed.

Thanks

Fred - KK5AA

We removed the firmware links and have been telling folks here not to try to load different firmware.

There should be a serial number inside the case on the PCB.

Yahoo group: DVAPDongle
Date: 2018-04-14 15:12:46 UTC
From: poppafred@...
Topic: 4584 Message: 4586

The Firmware Updater is still part of the DVAP Utilities. It has v1.07 preloaded. I searched and asked both here and the Facebook DVAP group and nothing about avoiding a firmware update was posted. I only found the missing serial number post after the fact.

I have searched the PCB with a magnifying loupe and I can find no serial number. The previous owner put it into the acrylic after market case and must have removed it.

How can I get the original firmware restored?

Fred - KK5AA

4587. MacOS High Sierra & DVAPTool

Yahoo group: DVAPDongle

From: markn@...
Topic: 4587 Message: 4587

I upgraded two iMac computers to the fairly new High Sierra. Previously, I was running Sierra. DVATool does not work on either computer. I have a 2 Meter and 70cm DVAPs and experience the same problem on both. You can get it to load and it appears to run for a few minutes. Then the computer stops communicating with the DVAP. You get get it to work for a few minutes by doing a force quit on the tool and unplugging the DVAP from the USB. Disabling APNAP does not make any difference and get the same behavior.

I go to another Mac just running Sierra and it appears to work fine. I downloaded the latest DVAPTool and find that version has the same problem. Does anyone have any ideas on how to solve them issue?

4591. DVAP Red 125 cm Model

Yahoo group: DVAPDongle
Date: 2018-04-18 12:38:30 UTC
From: sfvdan@...
Topic: 4591 Message: 4591

Good morning!

While this version of the DVAP Red Module works great with the DVAP tool, it won't work with the WinDV family of software products. WinDV will not accept a 125 cm frequency as a valid frequency.

Without the WinDV software, I can't access XFR's or do call sign routing,

Any suggestions for alternatives? Is the Red Module an SDR and can it be flashed for a different frequency band?

Thanks!

From: carlmailuk@...
Topic: 4562 Message: 4592

Not saying CQ on a repeater is old advice from the days when people were either listening or not to a repeater, so repeated cq cq cq was redundant and one 'cq' is best replaced by a brief comment. In those days repeaters were only for mobiles too.

Now a repeater can well be connected world wide, via multple modes, including analogue (HUBNET is now on YSF HUBNET, DMR brandmeister 4426, analogue AllStar , Echolink and DSTAR DCS477B) not only do you need a 3-4 second gap between overs there can be long latency between the systems, and drop outs and corruptions on one mode but not audible on another so you can sometimes miss the beginning and end of an over, so a longer slightly more repetitive initial call is beginning to make a bit more sense again. You do get a lot of ..this is XXnDDD missed the call old man.....you are a great signal into the system its like you are in the next chair, what was the name again...

That version is for newer devices. If you update an older device, you can cause issues with the serial number.

The firmware was removed from the dvapdongle site quite a while ago to avoid folks attempting upgrades when they shouldn't. There are still folks that search the internet and find someone else that posted it to their web site, load it, and then have issues.

D-STAR's premier training event returns to Dayton Hamvention®
For those just getting started in D-STAR and those looking to add to their D-STAR experience, this class is where you want to be. The class will be given by the experienced instructors from the Georgia D-STAR group and Icom who have presented seminars and training across the country. The three-hour class begins at 8:00am on Friday, May 18, on the first day of the Dayton Hamvention 2018 and will be held at the Drury Inn in the heart of the Hamvention hotels at 6616 Miller Lane. The cost of the class is only $25.00.
The class will feature will cover topics of interest to beginning D-STAR users including:

* D-STAR basics
* The D-STAR user registration process explained
* Getting started with your D-STAR radio
* Linking to repeaters and reflectors
* Helpful hints and tips to get the most from D-STAR
* D-STAR Data (DRATS)

4599. POSSIBLE DVAP HARDWARE FAILURE

Yahoo group: DVAPDongle
Date: 2018-05-03 04:31:15 UTC
From: youha@...
Topic: 4599 Message: 4599

I was using one of my 70cm DVAPs with my iMac. I had been working fine until the iMac apparently went to sleep during a time window when the DVAP was transmitting. Didn't think that was serious. I woke up the Mac and ran the DVAP tool software and it opened as normal. This time the DVAP will not respond to my HT no matter what, ID, echo...no transmission from the DVAP. Rebooting the Mac didn't fix the problem. I have a spare 70cm DVAP. Hooked that up and it works. I have a funny feeling that when the Mac went to sleep when the original DVAP was transmitting, a transient from the USB port caused firmware corruption or hardware damage to that DVAP. Any thoughts?

Dave B. WA6UHA

4600. POSSIBLE PERMANENT DVAP TOOL TRANSMITTER FAILURE

Yahoo group: DVAPDongle
Date: 2018-05-03 05:04:04 UTC
From: David Billeci
Topic: 4600 Message: 4600

Very unusual.I was using one of my 70 cm DVAPs on a iMac..worked great. While in QSO..the computer went to sleep while the DVAP was transmitting..got disconnected.woke up the computer.pulsing green on DVAP as was expected during this incident. Open the DVAP with the tool software.. got the blue, no errors on the DVAP tool screen but lost all functions via the HT. no connect, no echo, no ID. DVAP tool software s meter does respond to HT transmission. Rebooted the mac.same problem. I have a spare 70 cm DVAP. Connected that. Everything works with the spare. Firmware crash with the first DVAP when the Mac went to sleep? I have had the MAC go to sleep with that DVAP operational before but never a permanent failure like this but in that earlier situation it was in the receive mode maybe. Any thoughts? I may check the questionable DVAP on another computer and see what happens but as I said before the spare works on that iMac.

4604. Missed Keepalive

Yahoo group: DVAPDongle
Date: 2018-05-10 18:14:52 UTC
From: kc7hvb@...
Topic: 4604 Message: 4604

Using a DVAP Dongle I have been getting a "missed keepalive from gateway" message when trying to link to REF001C or REF030C. Initially I will receive a successful link message then ten seconds later an uncommanded (from my end) unlink with the "missed keepalive from gateway" message.

Other reflectors do not do this and I can stay linked as long as I like.

Any ideas on why this is happening?

Joe,
First, once the the image is on the SD card. The image is being removed by formatting. I am assuming you are using the SD formatting program and the Win32 Disk imageier. You need to ignore the format disk prompt for your computer. I hope this helps.

4611. DV3K Issues after Windows 1803 Update

Yahoo group: DVAPDongle
Date: 2018-05-20 14:06:02 UTC
From: pastormg2@...
Topic: 4611 Message: 4611

Once again, Microsoft updates have played a factor in my DV3K being recognized.
I go into dvtools and there is no choices for a com port.
My dv3k is under com port 10. But I don't have a way in DVTools to choose that.
It is just blank
Any suggestions?

I e-mailed with Robin Cutshaw. He tells me the gateway unknown message is due to my interfering with others on the reflectors, multiple links and/or testing software etc....
As a result I have been blocked on the main server. I have several questions.
Can another station be heard on a reflector before linking? This would prevent unwanted interference.
How do I get removed from the blocked list on the main server?
When using a DVAP should I only link to one reflector and leave it there? To prevent multiple links.
I have not seen any info saying an operator can not switch from one reflector to another as long as an unlink command is used first. Can anyone verify this.

Well, I removed DV Tools 2.1. I also removed the FTDI Chip files.
I ran the executable program and installed the Chip files.
I than installed DV Tools 2.1 and started the program.
Lo and behold it found the DV3K and all is well
I guess the secret to fixing this in the future everytime Windows
does there 1/2 year upgrade stuff is to delete the chip files and reinstall them.

Hi Paul, KC7HVB,

>I have several questions.
>Can another station be heard on a reflector before linking? This would prevent unwanted
>interference.
You connect and then wait for 15 to 20 seconds to see if the reflector is in use. You won't hear anyone until the next transmission on some devices. Others will pick up the traffic right away.

>How do I get removed from the blocked list on the main server?
Ask Robin to unblock you after you have identified the cause of the interference. People link all the time and sometimes butt in on a qso in progress. It happens. You apologize and wait your turn. That is not what causes someone to be blocked. Unmanned stations stuck in transmit, connection loops due to another hotspot device hearing your rf signal or running software that is flaky and crashes the reflector are what can cause one to be blocked. It is done to get your signal off the system so that everyone can use the reflector (or reflectors) again.

>When using a DVAP should I only link to one reflector and leave it there? To prevent multiple links?
You should not be able to connect to multiple reflectors with a DVAP unless you are running another software package that allows this to happen. That falls under "flaky software".

>I have not seen any info saying an operator can not switch from one reflector to another as long as an >unlink command is used first. Can anyone verify this?
That falls under "flaky software" if can can do this. You cannot move from one reflector to another with out disconnecting first. Some software packages will allow you to go to another reflector without the unlink "U" command, but you will be disconnected by the software before a new connection is established.

73,
James, N0XIA

Internet based users should also make sure you only have ONE connection at a time from your location to a particular Reflector.

With people today having multiple hotspots and DVAPs at their residences, connection from your home network at the same time can cause havoc on a reflector.

Thanks to you all for your input. From what I have learned it appears I will not have the block lifted. My offenses, whether real or perceived, have earned a permanent block from the REF system administrator. Many others have had this same thing happen to them. It is unfortunate that one individual holds that kind of power over the D-Star community.

4629. How to avoid DVAPTool 1.05 disconnections in Mac OS 10.13

Yahoo group: DVAPDongle
Date: 2018-06-17 16:15:43 UTC
From: Naubert.Aparicio@...
Topic: 4629 Message: 4629

Hello.

I have a new DVAP dongle (1.25 m) that I wanted to use with my Mac. As others have reported, from Mac OS 10.9 if the App Nap function is not disabled for the DVAPtool, the USB DVAP disconnects and you have to start everything. This happens every few minutes so it is a major issue. The workaround before was to start the finder, Get Info from the DVAPtool executable and select an option called "Prevent Nap App". But in DVAPtool v1.05 it the option won't appear. This is the workaround I have found to disable App Nap in DVAPtool v1.05 under Mac OS 10.13 and it worked for me:

1.- Start the Terminal application (normally in the Utilities folder inside the Application folder)
2.- Type the following in the terminal and press RETURN:

```
defaults write com.internetlabs.DVAPTool NSAppSleepDisabled -bool true
```

3.- If you want check that the flag actually was set just type this (optional):

```
defaults read com.internetlabs.DVAPTool
```

you should get an output like this:

```
{
NSAppSleepDisabled = 1;

}
```

4.- Close the Terminal
5.- Check your DVAP under Mac OS.

Please let me know if it worked for you.

73,

WP4OXG

4630. DVAP setup question "cannot set device ... frequency"

Yahoo group: DVAPDongle
Date: 2018-06-17 17:43:03 UTC
From: mspmail2@...
Topic: 4630 Message: 4630
Attachments: 2 described; binary payloads are missing from this source WARC

I just picked up a used DVAP 440 MHz version. I went through the installation process as documented on the dvap dongle page
http://www.dvapdongle.com/DV_Access_Point_Dongle/Installation.html
http://www.dvapdongle.com/DV_Access_Point_Dongle/Installation.html
and Windows did not alert me that I needed to install any drivers or anything. It gives me a pulsing yellow led when plugged in.

I was next able to install and run the DVAP tools 1.05 software, and filled out my callsign and set the freq to the 445.55 MHz which is what the previous owner must have set it to I guess. Anyway. I can open the DVAP successfully (see screen shot) and it seems to be working, although it says in the log, "cannot set device receive frequency" and then "cannot set device transmit frequency". What is going on there? Do I need to install a different driver? The DVAP is sitting here with a flashing blue light.

My dstar radio is a KW th-d74 that I hope to eventually use with this. I am brand new to Dstar!

Thanks for any help!

Your callsign was blocked due to harmful interference with the reflector. Unfortunately, there have been several folks in the last two weeks that have used bad software or connected multiple devices that caused loopbacks on the reflector, thus causing the reflector to quit functioning and causing so much loopback traffic the charges were starting to incur to the folks that pay for reflector bandwidth.

The bottom line is that if you cause a reflector to be unavailable to everyone else, you will be blocked.

73,
Robin

Thanks Robin No, I am not using a USB hub. I tried changing to another USB port and get the same message "cannot set device (rcv/xmt) frequency."

I have another PC and tried it there and don't see that error, so it something with this PC that is different. Tried reinstalling the FTDI drivers and that didn't help. The dvap must be communicating okay, anyway though? I know it is on 445.55 MHz. Why would it initialize the dvap okay, but not be able to set the freq? Weird.

thanks for the help!

Mike:
This may not be pertinent but the times I installed DVAP Tools on various computers
I always had to install Apple’s Bonjour printing app to get the DVAP to act right.
Makes no sense to me, but it cured setup problems.
Just a thought,
Garry

4641. Am I properly registered to use a DVAP?

Yahoo group: DVAPDongle

From: randers44@...
Topic: 4641 Message: 4641

I recently registered for D-Star and can use D-Star repeaters. I want to start using a DVAP instead but when I registered the D-Star registration page for my local repeater did not have a place to enter my ip address or pcname. As a result, I'm not sure I can use a DVAP to link to reflectors.

Does anyone know if a registered ip address and pcname are required in order to use a DVAP to link to reflectors?

Thanks,
Bob N0DZP

Hello Bob, N0DZP,

Your registration is good to go. You only need a pc name and ip address if you are going to play with the ID-1 radios on 23cm in the data mode. You are registered on a G3 gateway (KC0WLB). G3 gateways do not assign a pc name or ip address like G2's since it is really not necessary, unless (read the previous statement).

Note: KC0WLB appears to have issues that the admin ought to address. It has not reported to the US Trust for two months. Fortunately its' registration page can still be accessed if you need to add another terminal ID besides your base callsign. Some hotspot softwares insist on a letter be added to your callsign like "N0DZP A" for example.

Thanks for your answer James! I've been waiting to buy a DVAP until I could be sure I could use it without running into registration issues. It was difficult enough to find a registration link for a local repeater that worked. (Didn't notice that there is a link on dstarinfo.com to register users who don't have a local D-Star repeater of I would have just used that.)

Thanks again, 73
Bob N0DZP

4644. DVAP settings for Call Sign

Can you setup "call sigh routing" with DVAP? If so, tell me how.

4645. Receive Only

When I link to a reflector it links but says receive only. What could be wrong? I have stopped and restarted the app several times and it does not resolve the problem. The blue LED flashes as normal on the dvap dongle.

Thanks

Hello, I my new license is AD8BM. When I link to a reflector it linked receive only. I had a local person check things and he stated my call sign was registered incorrectly and only person who entered it can fix it. I went to their web address and could nit find dstar info. Can someone else fix the problem for AD8BM? My old call sign works fine.

Thanks

Hello Robin, my call sign is registered incorrectl. Call sign AD8BM. I cannot get it fixed. It says I am registered with the name regis. I have sent emails to various people and have not received a response. I have no idea why I was registered in Ireland and there is no way I can contact them to delete me so I can get registered locally. What else ca I do to resolve the problem?
